

WisdomTree

Emerging Markets Corporate Bond Fund

EMCB

Fund Overview

The WisdomTree Emerging Markets Corporate Bond Fund seeks to provide a high level of total return consisting of both income and capital appreciation through investments in the debt of emerging markets corporate issuers.

Investment Strategy Description

The Fund seeks to achieve its investment objective through investment in debt securities issued by corporate entities that are domiciled in, or economically tied to, emerging market countries. The issuers of such debt will include public, private, and state-owned or sponsored corporations.

JP Morgan CEMBI Diversified Index	1.44%	-1.66%	-0.97%	5.85%	4.62%	N/A	4.45%

Performance of less than one year is cumulative. You cannot invest directly in an index.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

Yields

Yield To Maturity	5.48%
Embedded Income Yield	5.45%
SEC 30 Day Yield	4.94%
SEC 30 Day Yield Unsubsidized	4.94%
Distribution Yield	4.08%

Performance is historical and does not guarantee future results.

Disclosures

This information must be preceded or accompanied by a prospectus. We advise you to consider the Fund’s objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other important information about the Fund. Please read the prospectus carefully before you invest. Call 866.909.9473 or visit WisdomTree.com for more information.

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions. Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition, when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer’s ability to make such payments will cause the price of that bond to decline. Unlike typical exchange-traded funds, there is no index that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objective will depend on the effectiveness of the portfolio manager. Please read the Fund’s prospectus for specific details regarding the Fund’s risk profile.

JP Morgan CEMBI Diversified Index: an alternatively (diversified) weighted index consisting of fixed or bullet US dollar-denominated Emerging Market corporate bonds. The index serves as a global corporate benchmark representing Asia, Latin America, Europe and Middle East / Africa. US dollar-denominated corporate issues from index-eligible countries are narrowed further by only including issues with more than \$500m current face outstanding and at least five years to maturity (at the time of inclusion into the index). The CEMBI (Narrow) is a subset of the CEMBI Broad index with more stringent rules including larger amount outstanding, longer maturity and less concentration in individual issuers.

JP Morgan CEMBI Broad Index through December 31, 2017; JP Morgan CEMBI Diversified Index thereafter.

IOPV: Indicative Optimized Portfolio Value, is a calculation disseminated by the stock exchange that approximates the Fund’s NAV every fifteen seconds throughout the trading day.

Effective Duration is a measure of the sensitivity of the Fund’s price to changes in interest rate changes and is calculated as the weighted average of the individual bond durations. For each bond, it also addresses that interest rate changes can alter expected bond future cash flows through embedded options. The calculation is also expanded to incorporate the contribution of derivatives to the overall interest rate risk sensitivity to the portfolio.

Embedded Income Yield:The annualized rate of return generated by a Fund’s investment in both fixed income securities and derivatives exclusive of interest rate changes and movement in foreign exchange spot rates. The calculation is intended to capture the Fund’s potential to earn income return over the following year given current holdings and market conditions. The embedded income yield will differ from the portfolio’s yield to maturity, due to the incorporation of derivatives in the embedded income yield. Embedded income yield and portfolio yield to maturity may differ from a Funds actual distribution and SEC yield and do not reflect Fund expenses.

Credit ratings:Credit ratings apply the underlying holdings of the Fund and not to the Fund itself. S&P and Moody’s study the financial condition of an entity to ascertain its creditworthiness. The credit rating reflects the rating agency’s opinion of the holding’s financial condition and history. The ratings shown are all considered investment grade and are listed by highest to lowest in percentage of what the Fund holds.

Forward Contract Gain/Loss: refers to the total Gain/Loss on the Forward Currency Contracts.

Forward Contract Notional: refers to the total notional value of the Forward Currency Contracts stated in U.S. dollars.

Fund Distribution Yield:is calculated by annualizing the most recent Fund distribution and dividing by the Fund’s current NAV. The yield represents a single distribution from the Fund and does not represent the total returns of the Fund.

Futures: Futures contracts reflect the expected future value of a commodity, currency or treasury security.

SEC 30-Day Yield:reflects the dividends and interest earned during the period, after the deduction of the Fund’s expenses. This is also referred to as the "standardized yield." **Unsubsidized SEC-30 day yield** does not reflect fee waivers in effect.

Yield To Maturity: Portfolio Yield to Maturity represents the weighted average yield to maturity of a Fund’s investments in money market securities and short-term fixed income securities as of a specified date. Yield to maturity is the rate of return generated on a fixed income instrument assuming interest payments and capital gains or losses as if the instrument is held to maturity. The weighted average yield is calculated based on the market value of each fixed-income investment. The calculation does not incorporate yield from any currency forward contracts that might be part of the Fund’s investments.
