

Bloomberg Dollar Spot Index (BBDXY)

In late December, Bloomberg announced the weights of the Bloomberg Dollar Spot Index for the coming year.

Using data available as of December 18, 2020 on trade weights published by the Federal Reserve and the triennial Foreign Exchange (FX) survey from the Bank of International Settlements (BIS), **the existing currency weights for the Bloomberg Dollar Spot Index (BBDXY) were maintained for 2021.**

- The Euro remains the currency with the largest weight, followed by the Japanese Yen and Canadian Dollar.
- Developed markets represent 6 of the 10 currencies and constitute 81.7% of the basket, while the 4 Emerging Market currencies comprise the remaining 19.3%.
- European currencies total 48.9% of the basket, currencies from Asia-Pacific region constitute 29.2% and the Canadian Dollar and the Mexican Peso combine for the remaining 21.9%.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds before investing. To obtain a prospectus containing this and other important information, please call 866.909.9473, or visit WisdomTree.com to view or download a prospectus. Investors should read the prospectus carefully before investing.

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. The Fund focuses its investments in specific regions or countries, thereby increasing the impact of events and developments associated with the region or country, which can adversely affect performance. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments.

Investments in currency involve additional special risks, such as credit risk and interest rate fluctuations. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. While the Fund attempts to limit credit and counterparty exposure, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments. The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements and may decline prior to the expiration of the repurchase agreement term. As this Fund can have a high concentration in some issuers, the Fund can be adversely impacted by changes affecting such issuers. Unlike typical exchange-traded Funds, there are no indexes that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objectives will depend on the effectiveness of the portfolio. Due to the investment strategy of the Fund, it may make higher capital gain distributions than other ETFs. Although the Fund invests in very short-term, investment grade instruments, the Fund is not a "money market" Fund, and it is not the objective of the Fund to maintain a constant share price. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
