

The **Bloomberg Barclays U.S. Short Aggregate Enhanced Yield Index ("Short Agg Enhanced Yield")** is designed to achieve a higher yield than the 1-5 year segment of the Bloomberg Barclays U.S. Aggregate Index ("Short Agg") while broadly retaining similar risk characteristics. The weights of the components in the Short Agg Enhanced Yield are rebalanced monthly. The new index projected weights went into effect after the close on April 30, 2019.

KEY REBALANCE HIGHLIGHTS

- The Short Agg Enhanced Yield is yielding 33 bps more than the Short Agg (2.83% vs. 2.50%) with similar duration (2.8 vs. 2.7 years) after rebalancing.
- Relative to last month, the Short Agg Enhanced Yield Index had minimal changes after rebalance. The Index...
 - reduced exposure to Asset Backed Securities with WAL 1-5 years by 0.23%.
 - increased exposure to 1-3 year Treasuries by 0.21%
- The Short Agg Enhanced Yield's largest overweights to the Short Agg are in Baa-rated credit (+30%), A-rated 3-5 year credit (+14%), and Commercial Mortgage Backed (CMBS) 1-5 year WAL¹ (+7.5%).
- Its largest underweights are in Treasuries (-30%) and A-rated 1-3 year credit (-5.8%).

¹WAL: weighted average life

Post-Rebalance Statistics and Exposures

Sources: Bloomberg, as of 4/30/2019.

The Short Agg Enhanced Yield's largest increase to exposure was to 1-3 year Treasuries by 0.21%. The largest reduction in exposure was a 0.23% decrease to Asset Backed Securities with a WAL of 1-5 years. Both were trends continuing from last month.

Major Changes in Exposures, After Rebalance

Increases in Exposures	
Treasury 1-3	0.21%
Credit Baa 3-5	0.07%
CMBS 1-5 WAL	0.01%

Reductions in Exposures

Glossary:

Yield to Worst (YTW) is the lowest potential yield that can be received on a bond without the issuer actually defaulting. When a bond is callable, the yield to worst is the lower yield of yield to maturity and yield to call.

Duration is a measure of the sensitivity of the price (the value of principal) of a fixed income investment to a change in interest rates. Effective duration is a calculation used to approximate the actual, modified duration of a callable bond. It takes into account that future interest rate changes will affect the expected cash flows for a callable bond.

Credit Quality is the underlying credit worthiness of a bond, reflecting its risk of default. Credit quality is typically represented by the credit ratings of a bond that are assigned by rating agencies such as Moody's or Standard & Poor's.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds before investing. To obtain a prospectus containing this and other important information, please call 866.909.9473, or visit WisdomTree.com to view or download a prospectus. Investors should read the prospectus carefully before investing.

There are risks associated with investing, including possible loss of principal. Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. High-yield or "junk" bonds have lower credit ratings and involve a greater risk to principal. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline. While the Fund attempts to limit credit and counterparty exposure, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments. Please read the Fund's prospectus for specific details regarding the Fund's risk profile
