

WisdomTree Barclays Interest Rate Hedged U.S. Aggregate Bond Fund

AGZD

With nearly \$4 trillion¹ benchmarked against the Bloomberg Barclays U.S. Aggregate Bond Index (Agg), the bond market's equivalent to the S&P 500, many investors view the Agg as a broad approximation of a generic U.S. investment-grade² bond portfolio. Historically, the securities that made up the Agg would make up a large portion of an investor's core bond portfolio. In more normal interest rate environments, the core could be counted on as a way to generate potential income and help mitigate the volatility³ of other, riskier asset classes. However, in the current market environment, investors are being faced with the prospect of increased volatility and low levels of income from this class of fixed income investments.

After an over 30-year bull market in U.S. interest rates, rates remain at some of their lowest levels in history. If the global economy improves and the Federal Reserve (Fed) tightens⁴ more aggressively than anticipated, the prospect of rising rates may yet again come to the forefront of investors' minds. With income potential so low and interest rate risk⁵ so high, what can investors do to help reduce their exposure to changes in the yield curve⁶?

The WisdomTree Barclays Interest Rate Hedged U.S. Aggregate Bond Fund (AGZD) can help investors preserve the coverage and breadth of their current investments while reducing their overall exposure to interest rate risk. By employing an institutional style approach of immunizing a bond portfolio against interest rate risk, we believe that bundling this exposure in an exchange-traded fund (ETF) may provide investors with yet another tool to help navigate a rising interest rate environment.

A HISTORY OF INTEREST RATES: LOWER AND LONGER

As shown in the following chart, the Agg has had a variety of risk (duration) and return (yield) profiles over the last 20 years. However, in recent years, investors have seen a consistent move to the bottom right, resulting in lower yields and more duration. In fact, at current levels, the Agg combines some of the lowest yields in its history with its greatest levels of interest rate risk. In this environment, even a relatively small rate increase could result in principal losses that completely offset the returns generated by interest income. In our view, investors still require income, but they don't necessarily need interest rate risk.

² Bonds with ratings of BBB-/Baa3 or higher are considered investment grade.

³ Volatility: A measure of the dispersion of actual returns around a particular average level. Generally, the higher the volatility, the riskier the security.

⁴ Fed tightening: Refers to the Federal Reserve enacting monetary policies that have the overall impact of reducing the availability of credit, which is widely thought to have the potential to slow economic growth.

⁵ Interest rate risk: The risk that an investment's value will decline due to an increase in interest rates.

⁶ Yield curve: Graphic depiction of interest rates on government bonds, with the current yield on the vertical axis and the years to maturity on the horizontal axis.

BLOOMBERG BARCLAYS RATE HEDGED U.S. AGGREGATE BOND INDEX, ZERO DURATION

Institutional investment managers frequently employ Treasury futures⁷ in managing the risk of their portfolios. The Bloomberg Barclays Rate Hedged U.S. Aggregate Bond Index, Zero Duration seeks to combine exposure to the Bloomberg Barclays U.S. Aggregate Bond Index with a structured interest rate overlay⁸ to target a duration of zero years.

INDEX COMPONENTS

Long portfolio	Bonds included in the Bloomberg Barclays U.S. Aggregate Index.
Short portfolio	Comprises short positions in U.S. Treasury Bonds ⁸ (with an aggregate duration target of 0 years). The portfolio will be rebalanced on a monthly basis.

⁷ Futures/futures contract: Reflects the expected future value of a commodity, currency or Treasury security

⁸ Interest rate overlay: Overlaying debt instruments on top of an existing portfolio

⁸ U.S. Treasury Bond: A debt security issued by the United States government.

ZERO DURATION IN INVESTOR PORTFOLIOS

In response to the prospect of rising rates, WisdomTree has sought to create tools that provide a hedged exposure to the U.S. bond market. Through AGZD, investors are able to maintain traditional bond exposures but decrease their overall sensitivity to rising interest rates.

But how do investors incorporate a zero duration fund into their wider portfolio? AGZD essentially combines a long position in cash bonds representative of the Bloomberg Barclays U.S. Aggregate Bond Index with a short position in Treasury Bonds and/or Treasury futures to target the zero interest rate exposure.

Investors can use the portfolio as a stand-alone tool for combatting rising interest rates or combine it with other interest rate-sensitive assets in their portfolio to target their desired level of risk.

POTENTIAL TRADE-OFFS

Although the WisdomTree Fund seeks to target a duration of zero years, a rate increase of 100 basis points¹⁰ does not necessarily guarantee a 0% change in the price of the portfolio. Given that interest rates may rise at different speeds along various points of the yield curve, it may be possible that the targeted interest rate exposure is not effective at offsetting losses from long bond positions. Additionally, should rates remain constant (or fall), the strategy may underperform a long-only portfolio. However, in today's low opportunity cost environment, we believe that the potential risks of rising rates outweighs the potential losses in carry¹¹ from putting on this exposure.

¹⁰ Basis point: 1/100th of 1 percent.

¹¹ Carry: The amount of return that accrues from investing in fixed income or currency forward contracts.

THE RISK OF RISING RATES HAS INCREASED

While the Federal Reserve (Fed) has already begun the path to raising short-term rates, longer-term interest rates could rise as well. The risk of rising rates is becoming increasingly important for fixed income investors.

- + One of the consequences of low interest rates is that many recently issued bonds are more sensitive to rises in interest rates, given their low coupons¹²
- + Even by reducing duration, investors could simply lose less when interest rates rise and the yield curve steepens¹³
- + Primary catalysts for rising interest rates may include: reduction in monetary stimulus¹⁴, inflation, rises in Fed interest rate target or political dysfunction

There are risks associated with investing, including possible loss of principal. Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. The Fund seeks to mitigate interest rate risk by taking short positions in U.S. Treasuries, but there is no guarantee this will be achieved. Derivative investments can be volatile, and these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions.

Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline. The Fund may engage in "short sale" transactions of U.S. Treasuries where losses may be exaggerated, potentially losing more money than the actual cost of the investment, and the third party to the short sale may fail to honor its contract terms, causing a loss to the Fund. While the Fund attempts to limit credit and counterparty exposure, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments. Investing in mortgage- and asset-backed securities involves interest rate, credit, valuation, extension and liquidity risks and the risk that payments on the underlying assets are delayed, prepaid, subordinated or defaulted on. Due to the investment strategy of certain Funds, they may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
