

# ANALYZING OUR TOP 20 U.S. DIVIDEND GROWTH STOCKS

Jeremy Schwartz – Global Chief Investment Officer

In a [recent blog](#), we outlined how we’ve recently developed an Index methodology designed to focus on dividend growth, but not by solely looking at a history of past dividend increases. We focus on a few factors that we believe have the potential to raise the probability that qualifying Index constituents will grow their future dividend payments. To reiterate, those were:

- [Earnings growth estimates](#)
- [Return on equity \(ROE\)](#)

- [Return on assets \(ROA\)](#) while there is truly no way to look into the future, we believe this to be a fundamentally oriented approach that differentiates itself from being dependent on dividend history as the only metric by which to judge future dividend growth potential. In this blog, we examine the top 20 qualifying companies and discuss whether these firms have dividend histories that would allow them to qualify for potential inclusion in the [NASDAQ US Dividend Achievers Select Index](#) (“Achievers Select”), meaning that they’ve increased their dividends for 10 consecutive years. The Achievers Select is the market [capitalization-weighted](#) benchmark for our index.

\*Year of potential eligibility: Constituents of DVG must demonstrate 10 consecutive years of dividend increases to be eligible for inclusion. Year indicates when an excluded stock could meet that criterion. "Current Member" indicates stocks that are currently i

Of the top 20 constituents of the [WisdomTree U.S. Dividend Growth Index](#), nine are current constituents of the Achievers Select. Of the 11 excluded firms, many would not be eligible until around 2020, even if they continue to increase their dividends each year. These excluded firms tended to have higher average long-term earnings growth expectations, higher average ROE and even higher average [trailing 12-month dividend yields](#). The Apple Effect: Apple has become the largest dividend payer in the United States<sup>1</sup> and is the largest holding in the [WisdomTree U.S. Dividend Growth Index](#). Apple is not eligible to be included in the Achievers Select until 2023.

• Higher Earnings Growth Expectations: One of the key summary statistics in this top 20 table are the earnings growth averages of companies included in the Achievers Select versus the averages of those excluded. Notably, of the 20 constituents of the WisdomTree U.S. Dividend Growth Index that are included in the Achievers Select, the average earnings growth expectation was 9.46%. That compares to the average of companies not included in Achievers Select (due to their more limited dividend history) of 12.0%. **Conclusion** There is little question that many of the firms comprised in this list are strong companies with brands that are essentially household names across the U.S. While there is no way to know whether any of them will raise their dividends in the future, we would question the exclusion of such firms as Apple, Microsoft, Altria, UPS and Boeing if the sole reason for doing so is a lack of 10 consecutive years of dividend increases. Each has a return on equity over 30%—with Altria and Boeing being substantially higher. While we can't state whether those figures will directly impact future dividend growth or future returns, we believe that they indicate significant profitability and merit further consideration. *View Jeremy Schwartz discuss dividends ([video](#)) Read our Dividend Growth series [here](#).*<sup>1</sup>This is based on Apple's indicated dividends per share as of its latest earnings announcement dated 4/23/2013.

## DEFINITIONS

**Earnings growth estimates**: Bloomberg analysts' long-term earnings growth expectations, which encompass the estimated growth in operating earnings per share over the company's next full business cycle, typically three to five years.

**Return on Equity (ROE)**: Measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

**Return on assets (ROA)**: Firm profits (after accounting for all expenses) divided by the firm's total assets. Higher numbers indicate greater profits relative to the level of assets utilized to generate them.

**NASDAQ US Dividend Achievers Select Index**: Designed to track the performance of dividend-paying companies in the U.S. that have increased their annual dividend payments for the last 10 or more consecutive years.

**Market capitalization-weighting**: Market cap = share prices x number of shares outstanding. Firms with the highest values receive the highest weights in approaches designed to weight firms by market cap.

**WisdomTree U.S. Dividend Growth Index**: A fundamentally weighted index designed to track the performance of dividend-paying companies in the U.S. that WisdomTree believes have the potential to increase their dividends due to certain factors, which include estimated earnings growth, return on equity and return on assets. Weighting is by indicated cash dividends.

**Trailing 12-month dividend yield**: Dividends over the prior 12-months are added together and divided by the current share price. Higher values indicate more dividends are being generated per unit of share price.
