

# "INFLATE-GATE"? DON'T TELL THAT TO THE BOND MARKET

Kevin Flanagan — Head of Fixed Income Strategy

02/10/2021

If you've been keeping up with my 2021 blog posts, you'll know by now that my focus has been on the "[reflation trade](#)." Certainly, not all market participants are convinced yet that [inflation](#) might make a comeback, but don't tell that to the bond market.

As I go to press, the [U.S. Treasury \(UST\) 10-Year yield](#) continues to reside at the upper end of the trading range that has been established thus far in the new year, i.e., around the 1.15%–1.20% threshold. While the 2021 trend has been unmistakably to the upside, the UST 10-Year has experienced a brief hiatus from time to time. That is to be expected—from a nearer-term perspective, interest trends can resemble a sawtooth-type pattern. Looking ahead, I continue to see the overarching pattern as a rising one.

## 10-Year [Breakeven Inflation Rate](#)

Source: St. Louis Fed, as of 2/4/21.

Why is that, you say? Well, take a look at this graph, which measures the 10-year breakeven spread, or what is better known as inflation expectations. Just last week, this gauge rose to 2.19%, the highest level since 2014! Sure, it was easy to see a move from the low of 0.50% in March 2020, the height of the market's pandemic dislocations, to the 1.75% vicinity, in response to the twin stimulus responses from the [Federal Reserve \(Fed\)](#) and the U.S. government. It is the residual upside that has been witnessed since December to its current level that has caught my attention. If you look closely at the breakeven graph, it is apparent that movement above the 2.30% threshold has been a somewhat rare development over the last 10 years. At its current reading, the breakeven rate is only about 10 [basis points \(bps\)](#) away from that milestone.

## Conclusion

In my multi-decade experience in fixed income, I've learned the market is a lot smarter than I am. So, when a development like this occurs, I don't discount what the market is trying to tell me, namely, the chance of higher inflation in the months/years ahead has now increased in a visible fashion.

Against that backdrop, in my opinion, investors should consider positioning their fixed income portfolios for what tends to occur when inflation is beginning to show signs of rearing its head...higher interest rates.

## **DEFINITIONS**

**Inflation** : Characterized by rising price levels.

**10- Year Treasury** : a debt obligation of the U.S. government with an original maturity of ten years.

**Break-even inflation rate** : For a given bond maturity, for example five years, the interest rate on the five-year nominal bond minus the interest rate on the five-year inflation adjusted bond; meant to approximate expected inflation over that time frame, in this case five years.

**Federal Reserve** : The Federal Reserve System is the central banking system of the United States.

**Basis point** : 1/100th of 1 percent.
