

MOST GREAT INVESTMENTS BEGIN IN DISCOMFORT: IS RUSSIA TURNING A CORNER?

Jeremy Schwartz — Global Chief Investment Officer
03/12/2015

I recently attended the Chartered Financial Analyst (CFA) Institute's annual forecast dinner in Denver, where the keynote, from a major asset manager, reviewed equity valuations across the world. He commented that there are not many equity regions that look particularly attractive compared to their histories, unless one is buying Russian energy companies. His remark generated a chuckle from the audience, showing deep skepticism about such a position today. But that's not the whole picture. The CFA Institute surveys its 120,000 global members annually; for 2015, the top four countries that members favored were the United States (by a large margin), China, India and Russia.¹ So, despite the skepticism, a number of strategists are still eyeing the depressed Russian market. **Steep Discounts** "Most great investments begin in discomfort. The things most people feel good about—investments where the underlying premise is widely accepted, the recent performance has been positive and the outlook is rosy—are unlikely to be available at bargain prices. Rather, bargains are usually found among things that are controversial, that people are pessimistic about and that have been performing badly of late." —Howard Marks, chairman, Oaktree Capital Management, Renown Value Manager Russia is currently selling at an extremely discounted [valuation](#). It is currently out of favor due to the huge collapse in oil prices—many of the large Russian companies are in the oil business—and as a result of the sanctions Russia is enduring over the political situation in Ukraine. When we evaluate the [median P/E ratios](#) of major equity regions over the last 20 years, the broad [MSCI Emerging Markets Index](#) is trading very close to its longer-run historical median P/E ratio. But Russia stands out, both for its low single-digit number and because it is selling at nearly a 50% discount to its historical median level. Of course, earnings may fall in the next year, given the collapse in oil prices, but even a 50% fall in earnings would leave Russia selling at a large discount to the rest of the emerging markets. **How Attractive Are Valuations in Russia?**

Country/Region Index	20-Year Median P/E	1/31/2015 Trailing P/E	Discount	Year-to-Date Performance
MSCI Russia Index	6.6x	3.4x	-48.3%	24.8%
MSCI EAFE Index	22.2x	16.9x	-24.2%	3.7%
MSCI China Index	13.3x	10.2x	-23.1%	4.0%
MSCI Emerging Markets Index	13.1x	12.1x	-7.7%	3.3%
S&P 500 Index	17.8x	17.6x	-1.1%	2.1%

MSCI Russia and China trailing P/E start in January 1996 and October 1995 respectively. Past performance is not indicative of future results. You cannot invest directly in an index.

For definitions of terms and indexes in the chart, please visit our [glossary](#). **Russia: Performance Standout of 2015** Russia has started off 2015 as a leader in global equity prices. Russia has led all emerging market countries in the first two months of the year.² Much of the rebound is from stabilization in the currency, which has rebounded based on optimism over settlement talks and a fragile peace that is holding in the Ukraine. Companies or countries are very often attractively priced for very good reasons. Referring to Marks's words, Russia is a place of discomfort for investors today. But some of the very best returns over the long run can be found from such dislocations in the market. What strategies are buying Russia today? **Emerging Market Strategy That Allocates to Value** [WisdomTree's Emerging Markets Equity Income Fund \(DEM\)](#) tracks an [Index](#) that employs a rules-based process to allocate weight where it finds value every year—by selecting companies ranking in the highest 30% by [dividend yield](#) and setting weights according to the dividends that the companies pay. This strategy

does not go with consensus opinion on a market; instead, it allocates to where prices are attractive relative to dividend payments. The strategy has a compelling long-term track record, beating 92% of its peer group since inception, but it has seen disappointing short-term performance, given the recent over-weight to Russia. That said, if the peace in Ukraine holds and oil prices begin to stabilize, DEM may prove to be one of more rewarding allocations among global equities.

DEM Beat 92% of the Active Managers since Inception

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total returns are calculated using the daily 4:00 p.m. EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

You cannot invest directly in an index. Index performance does not represent actual fund or portfolio performance. A fund or portfolio may differ significantly from the securities included in the index. Index performance assumes reinvestment of dividends but does not reflect any management fees, transaction costs or other expenses that would be incurred by a portfolio or fund, or brokerage commissions on transactions in fund shares. Such fees, expenses and commissions could reduce returns.

Important Risks Related to this Article

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Funds focusing on a single sector generally experience greater price volatility. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation, intervention and political developments. Due to the investment strategy of this Fund, it may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
