

BALANCE SHEETS TO THE MOON?

Jianing Wu — Senior Analyst, Research
03/04/2021

This is the first installment of our blog series on bitcoin's growing demands.

Bitcoin has come under heavy scrutiny from the investment community. The fact that its price skyrocketed to \$58,350 per bitcoin—almost three times higher than its 2017 peak—has attracted people's attention.

A flurry of news signaling institutional investors and corporations' adoption of the asset is fueling optimistic expectations for future demand. One of the most prominent examples is Tesla, which revealed a surprising \$1.5B investment in bitcoin in early February.

In a series of three blog posts, we will examine three potential sources of bitcoin demand: corporations investing in bitcoin as part of their [corporate treasury](#), investment funds allocating capital to bitcoin and payment platforms accepting bitcoin as a possible payment.

Here, we introduce the first source—corporations' balance sheet trades.

Recent Notable Balance Sheet Trades

Sources: WisdomTree, Bloomberg, as of 2/23/21. Past performance is not indicative of future results.

- **MicroStrategy**

MicroStrategy is one of the first public companies to invest a significant portion of its corporate treasury in bitcoin, treating "bitcoin... as the primary treasury reserve asset."¹

As of February 8, 2021, MicroStrategy holds a total of ~\$3.17B (71,079 BTC) in bitcoin, which is more than 53x its cash and cash equivalents.² It recently completed a \$1.05 billion debt offering to take its bitcoin investment one step further.

Its aggressive allocations stem from CEO Michael Saylor's bullish view on bitcoin, which he deems a superior investment to [fiat money](#) to store value.

- **Square Inc.**

Square invested \$50M (4,709 BTC) in bitcoin on October 8, 2020. It completed a second purchase of \$170M (3,318 BTC) on February 23, 2021. Together, Square's bitcoin investments represent 18% of its cash and cash equivalents. The move was motivated by the company's strategic plan to develop a bitcoin trading business, as well as the desire to "expand [its] largely USD-denominated balance sheet" in the low-yield and weakening-dollar environment.³

- **B2C2, Genesis, BCB**

Cryptocurrency market makers such as B2C2 (now acquired by SBI Financial Services), Genesis and BCB have been reportedly pitching the bitcoin balance sheet trade to large firms. B2C2's Vice President of Sales & Trading APAC, Yamazaki, said:

"We believe that allocating a part of a company balance sheet is a great way to market [hedge](#), settlement hedge, [and] it is also a good PR campaign."⁴

Similarly, Genesis believes that bitcoin is a good investment for corporations to improve returns, [liquidity](#) and yield. BCB also launched a solution called [BCB Treasury](#) to help institutional investors bring bitcoins to its balance sheet.

- **Tesla**

On February 8, 2021, Tesla announced its purchase of \$1.5B of bitcoins in an SEC filing. The \$1.5B purchase equates to approximately 8% of Tesla's cash and cash equivalents. Tesla explains that it bought bitcoins to "diversify and maximize returns on our cash that is not required to maintain

adequate operating liquidity.”⁵

Why Are Companies Getting Bitcoin Exposure on Their Balance Sheet?

The reasons for allocating a portion of corporate treasury to bitcoin are varied and debated, but there are two common factors driving these corporate purchases.

First, some companies—and especially tech companies—have piles of extra cash sitting on the balance sheet earning diminished returns in the current low-yield environment. Corporations are seeking alternatives to better invest their cash. Bitcoin, an asset historically uncorrelated to equities and bonds, not only has the potential to diversify a portfolio but also to generate significant returns. It appears that companies investing excess cash not required for operating liquidity have viewed taking on some volatility as warranted and invested a small portion to participate in the digital assets potential.

Second, most companies that invested in bitcoin have business models related to it. Online payment companies such as Square adopted bitcoin to complement Square's bitcoin trading product (Cash App) and its blockchain technology teams (Square Crypto, Cryptocurrency Open Patent Alliance). It is a more natural decision when the company is already in the crypto space. Other examples include Tesla—it plans to accept bitcoin as payment to purchase products. Adding bitcoins to its balance sheet helps it build infrastructure to handle bitcoin transactions and to prepare for any accounting guidance changes.⁶

Who's Next?

There are many companies that could potentially add bitcoin to their corporate treasury.

S&P 500 companies⁷ are currently sitting on more than \$1T in cash, a 20% increase compared to the average from 2013 to 2018. The highest cash level comes from Information Technology. In particular, the top five companies are Amazon, General Electric, Apple, Oracle and Alphabet.⁸ Together they hold 16% of the total cash in the S&P 500, excluding Financials, Real Estates and Utilities.

Tech companies with large amounts of cash are most open to making the switch, since bitcoins typically fit more naturally within their business profiles and can offer meaningful returns at the same time. Some of these tech companies could include:

- **Apple:** In its latest 10-K, Apple holds \$189B of cash, cash equivalents and marketable securities. Apple Pay also started accepting bitcoins for the first time through support of the BitPay Prepaid Mastercard on February 16, 2021.
- **Twitter:** Twitter could follow its sister company Square's path to invest in bitcoin. Twitter's CFO hinted at its interest in buying bitcoins in an interview with CNBC. Bitcoins can be incorporated into its digital payment system to facilitate transactions.
- **Amazon:** Amazon is preparing to launch a digital currency project to create its own cryptocurrency. Although it hasn't disclosed any plan to adopt bitcoin, Amazon's interest in the crypto space is undeniable.
- **Uber and Airbnb:** Although Uber stated that it would not buy bitcoins with cash in the near future, Uber is considering accepting payments via bitcoins. Airbnb seems more open to cryptocurrencies than Uber. It stated in the prospectus when filing for its initial public offering (IPO) that its "future success will...depend on our ability to adapt to emerging technologies such as tokenization, cryptocurrencies [and] new authentication technologies."⁹

To conclude, we are seeing encouraging signs of potential new demands coming from corporations. This trend might accelerate in the coming years as more and more companies start to offer crypto services or accept crypto payments. Although this was an unexpected new source of demand for bitcoin for many outside observers, it has the potential to become significant.

In the next blog post of this series, we will discuss a second important source of demand for the asset class—adoption in the investment management industry.

Important Risks Related to this Article

Please note WisdomTree Asset Management, Inc. does not offer any bitcoin products.

Bitcoin operates as a decentralized, peer-to-peer financial exchange and value storage that is used like money. Bitcoin operates without central authority or banks and is not back by any government. Bitcoin generally experience very high volatility. Bitcoin is also not legal tender. Federal, state or foreign governments may restrict the use and exchange of cryptocurrency, and regulation in the U.S. is still developing. Bitcoin exchanges may stop operating or permanently shut down due to fraud, technical glitches, hackers or malware.

This material represents an assessment of the market environment at a specific time and is not intended to be a forecast of future events or a guarantee of future results. This material should not be relied upon as research or investment advice regarding any security in particular. The user of this information assumes the entire risk of any use made of the information provided herein. Unless expressly stated otherwise, the opinions, interpretations or findings expressed.

There are risks associated with investing, including the possible loss of principal. Crypto assets, such as bitcoin and ether, are complex, generally exhibit extreme price volatility and unpredictability and should be viewed as highly speculative assets. Crypto assets are frequently referred to as crypto "currencies," but they typically operate without central authority or banks, are not backed by any government or issuing entity (i.e., no right of recourse), have no government or insurance protections, are not legal tender and have limited or no usability as compared to fiat currencies. Federal, state or foreign governments may restrict the use, transfer, exchange and value of crypto assets, and regulation in the U.S. and worldwide is still developing. Crypto asset exchanges and/or settlement facilities may stop operating, permanently shut down or experience issues due to security breaches, fraud, insolvency, market manipulation, market surveillance, KYC/AML (know your customer/anti-money laundering) procedures, noncompliance with applicable rules and regulations, technical glitches, hackers, malware or other reasons, which could negatively impact the price of any cryptocurrency traded on such exchanges or reliant on a settlement facility or otherwise may prevent access or use of the crypto asset. Crypto assets can experience unique events, such as forks or airdrops, which can impact the value and functionality of the crypto asset. Crypto asset transactions are generally irreversible, which means that a crypto asset may be unrecoverable in instances where: (i) it is sent to an incorrect address, (ii) the incorrect amount is sent or (iii) transactions are made fraudulently from an account. A crypto asset may decline in popularity, acceptance or use, thereby impairing its price, and the price of a crypto asset may also be impacted by the transactions of a small number of holders of such crypto asset. Crypto assets may be difficult to value, and valuations, even for the same crypto asset, may differ significantly by pricing source or otherwise be suspect due to market fragmentation, illiquidity, volatility and the potential for manipulation. Crypto assets generally rely on blockchain technology, and blockchain technology is a relatively new and untested technology that operates as a distributed ledger. Blockchain systems could be subject to internet connectivity disruptions, consensus failures or cybersecurity attacks, and the date or time that you initiate a transaction may be different than when it is recorded on the blockchain. Access to a given blockchain requires an individualized key, which, if compromised, could result in loss due to theft, destruction or inaccessibility. In addition, different crypto assets exhibit different characteristics, use cases and risk profiles. Information provided by WisdomTree regarding digital assets, crypto assets or blockchain networks should not be considered or relied upon as investment or other advice, as a recommendation from WisdomTree, including regarding the use or suitability of any particular digital asset, crypto asset, blockchain network or strategy. WisdomTree is not acting and has not agreed to act in an investment advisory, fiduciary or quasi-fiduciary capacity to any advisor, end client or investor, and has no responsibility in connection therewith, with respect to any digital assets, crypto assets or blockchain networks.

DEFINITIONS

Corporate treasury : The funds of a corporation.

Fiat money : Any money that is accepted by a government for paying taxes or debt, but is not pegged to or backed directly by gold and other valuables.

Hedge : Making an investment to reduce the risk of adverse price movements in an asset. Normally, a hedge consists of taking an offsetting position in a related security, such as a futures contract.

Liquidity : The degree to which an asset or security can be bought or sold in the market without affecting the asset's price. Liquidity is characterized by a high level of trading activity. Assets that can be easily bought or sold are known as liquid asset.

BCB Treasury : A service launched by BCB to help corporate treasury departments looking to get involved with digital assets.

Yield : The income return on an investment. Refers to the interest or dividends received from a security that is typically expressed annually as a percentage of the market or face value.

Diversification : A risk management strategy that mixes a wide variety of investments within a portfolio.

Volatility : A measure of the dispersion of actual returns around a particular average level. nbsp;

S&P 500 Index : Market capitalization-weighted benchmark of 500 stocks selected by the Standard and Poor's Index Committee designed to represent the performance of the leading industries in the United States economy.

Initial public offering (IPO) : The first sale of stock by a private company to the public.
