

EMERGING MARKETS QUALITY DIVIDEND GROWTH REBALANCE: FALL 2023

Matt Wagner — Associate Director, Research
10/26/2023

In May of this year, WisdomTree rebalanced the [WisdomTree Emerging Markets Quality Dividend Growth Fund \(DGRE\)](#) completely away from China, bringing its 29% weight in China at the time down to 0%.

The decision was made primarily to mitigate the Fund's exposure to escalating geopolitical tensions between China and the U.S., and to give another asset allocation option for broad [emerging markets](#) exposure without a roughly one-third weighting to China.

For more background on this decision, [read this blog post](#).

We rebalanced [DGRE](#) again this month, maintaining its zero exposure to China.

Without that exposure to China, the Fund's biggest weight at 29% is in India, a nearly 15% over-weight in the country relative to its exposure in the [MSCI Emerging Markets Index](#).

Supporting this active country exposure relative to the benchmark, my colleagues wrote an excellent piece this summer on why India may be at the [cusp of an economic boom](#).

The Investment Process

[DGRE](#) is a rules-based active ETF. The Model selects roughly 250–300 dividend-paying constituents based on characteristics of dividend sustainability (dividend coverage ratio greater than one), higher profitability metrics (quality) and premium trailing dividend growth.

The below table shows the top 10 [DGRE](#) holdings before (old) and after (new) the rebalance.

As mentioned in a previous post, Taiwan Semiconductor—maintained as the top holding in [DGRE](#)—has consistently been one of the fastest dividend growers globally over the last several years, growing at 7% annualized over the last five years.

The weighting process for [DGRE](#) is modified market-cap to give greater weight to companies with higher scores on quality and dividend growth. To reduce turnover, constituents that are maintained in the basket are held at a weight that is roughly equal to what it was prior to the rebalance.

The one-way turnover for the Fund at the rebalance was just around 19%.

After the rebalance, [DGRE's dividend yield](#) is slightly lower, and its price-to-earnings ratio is almost unchanged at a little more than one times below that of the MSCI EM Index.

Further, as the process favors quality companies earning a high return on equity and assets, the return-on-equity advantage over the broad MSCI EM Index was improved while the return on assets was little changed.

Conclusion

Emerging markets equities have repeatedly disappointed U.S. investors over the last decade.

The rising political tensions between the U.S. and China have made some investors wary of investing in emerging markets altogether given the outsized weight of China in broad benchmarks.

For investors aiming to mitigate that risk, [DGRE](#) offers a compelling solution by way of a basket of high-quality, dividend-paying companies.
