

WHAT ASSET CLASS RALLIED LAST WEEK AMID THE SELL OFF?

Luciano Siracusano — Chief Investment Strategist

08/06/2014

Last Thursday's sell-off in U.S. stocks (the [Dow](#) was down 317 points, the [S&P 500 Index](#) was down nearly 2%)¹ marked the biggest stock market decline in nearly four months². The S&P 500 Index closed at 1,930 after it broke its [50-day moving average](#) for the first time since April³. With [volatility](#) rising and sentiment shifting, I would not be surprised to see the S&P 500 test its [100-day moving average](#) (1,910) and, if pierced, its [200-day moving average](#) at 1,857 (roughly a 4% decline from Thursday's close). Although headlines from Thursday regarding Argentina's default on roughly \$500 million in interest payments⁵ spooked the bond markets, the more important event that day may have been the higher-than-expected print on the [Employment Cost Index](#), which increased to .7% in the second quarter⁶. Fed chairman Janet Yellen's zero interest rate policy (ZIRP) hinges on the perception that inflation is not on the horizon and that the labor market still has plenty of slack. Though continued job growth and a pickup in wages would be good for consumer spending and the overall economy, it could also indicate that the Fed is behind the curve with respect to how quickly the labor market is tightening and how soon higher inflation, spurred by increased labor costs and a policy of easy money, may ripple through the economy. Each day is a tug-of-war, but if fresh data in the weeks ahead leads market participants to believe that the Fed will move sooner rather than later to raise policy rates, I believe that a repricing of assets may occur in the third quarter, rather than three to six months from now. What made Thursday's action equally troubling to many who manage money is that most asset classes bled red on the same day. When assets that are not supposed to [correlate](#) all decline in tandem (stocks⁷, bonds⁸, gold⁹, commodities¹⁰, U.S. government debt¹¹, emerging market debt¹², investment-grade credit¹³, high-yield credit)¹⁴ investors are reminded what it means to have a truly diversified portfolio—and how difficult it can be to create one. One of the few indexes to rally on Thursday amid the sell-off was the [Bloomberg Dollar Index \(BBDXY\)](#). The Index, which tracks a basket of 10 foreign currencies in the developed world and the emerging world, rose in value, reflecting the U.S. dollar's relative strength in a world where "[risk](#)" was coming out of the market. This makes sense. Fears of higher rates would hurt bonds but could make the U.S. dollar look more attractive, particularly compared to developed world currencies where central banks will likely be accommodative for far longer than the U.S. Federal Reserve. In the chart below, you can see how the Bloomberg Dollar Index (in white) has rallied over the last two months, particularly as the S&P 500 Index weakened toward the end of July.

BBDXY Index refers to the Bloomberg Dollar Index. SPX Index refers to the S&P 500 Index.
 Source: Bloomberg, with data from 5/30/14 to 7/31/14. Period chosen to indicate the difference in performance of BBDXY Index during a time of rising U.S. equities contrasted with the one-day significant decline. This is a short-term period, and investors should recognize that short-term periods can be volatile.
 Past performance is not indicative of future results. You cannot invest directly in an index.

For investors looking for a way to hedge the impact of a sudden change in market sentiment, gaining exposure to the U.S. dollar relative to foreign currencies may make a lot of sense as a tactical holding until the market fully absorbs the Fed's intention and the timing of its eventual liquidity-curbing actions¹⁵.

The last day the S&P 500 Index broke its 50-day moving average was 4/10/14. ⁴Source: Bloomberg, for both 100- and 200-day moving averages, measured as of 7/31/14. ⁵Source: Camila Russo & Katia Porzecanski, "Argentina Declared in Default by S&P as Talks Fail," Bloomberg, 7/30/14. ⁶Source: Sam Ro, "Traders Are Blaming Thursday's Big Sell-Off on 1 Stat," Business Insider, 7/31/14. ⁷Refers to S&P 500 Index. ⁸Refers to [Barclays U.S. Aggregate Index](#). ⁹Refers to the price of gold, measured in U.S. dollars (not a specific index). ¹⁰Refers to [S&P GSCI Index](#). ¹¹Refers to the U.S. 10-Year Treasury note. ¹²Refers to the [J.P. Morgan GBI-EM Global Diversified Composite Index](#). ¹³Refers to the [iBoxx \\$ Liquid Investment Grade Index](#). ¹⁴Refers to the [iBoxx \\$ Liquid High Yield Index](#).
¹⁵In this context, liquidity-curbing actions means raising of the Federal Funds Rate, which is the policy tool employed by the Federal Open Market Committee to tighten U.S. monetary policy, potentially slowing the pace of economic growth.
