

SHARE BUYBACKS: THE OTHER DIVIDEND

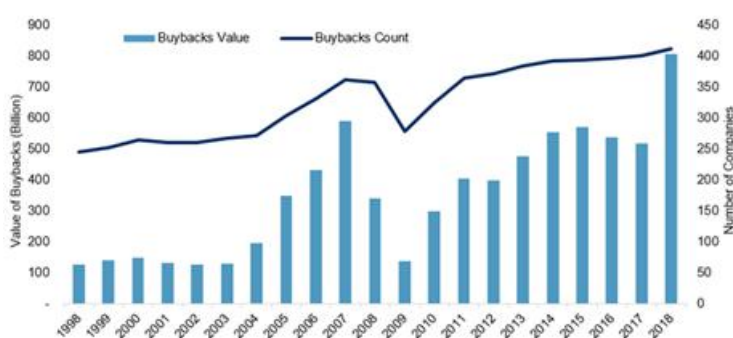

Jeff Weniger — Head of Equity Strategy

09/30/2019

You have a business, and your cash on hand is growing. What do you do? If you park it in [T-bills](#), the income generated will probably be negligible. You believe it's time to move it off the [balance sheet](#) either as a [dividend](#), which is often a taxable event, or by repurchasing shares, where taxes can be more easily managed (some shareholders will opt to sell, while others can sit tight).

Look at this writ large: [Share buybacks](#) have become the *other* dividend. According to Qing Li at S&P Dow Jones Indices, [S&P 500 Index](#) companies purchased \$806 billion worth of shares last year (figure 1). For context, the total value of the S&P is \$26 trillion.

Figure 2 shows the logic using a hypothetical business worth \$1,000 with \$200 in cash. Say it only needs half the cash to operate. If management buys back stock, look what happens to [earnings per share](#) and [return on equity \(ROE\)](#). This isn't rocket science, but on paper, the management looks like a bunch of geniuses.

Figure 2: Implementing a \$100 Buyback

Stock Profile	Before Buyback		After \$100 Buyback	
A Market	\$1,000	Given	\$900	45 Shares Remained and Stock Price Unchanged
B Cash	\$200	Given	\$100	Used \$100 to Buy Shares
C Other Assets	\$800	A Minus B	\$800	A Minus B
D Shares Outstanding	50	Given	45	New Shares Outstanding
E Stock Price	\$20	A Divided by D	\$20	Unchanged Stock Price
F Earnings	\$100	Given	\$100	Nothing Changes Here
G Earnings Per Share	\$2.00	F Divided by D	\$2.22	F Divided by D
H Price/Earnings	10.0	E Divided by G	9.0	E Divided by G
I Return on Equity	10.0%	F Divided by A	11.1%	F Divided by A

Some firms¹ opt to do the opposite, issuing shares to raise money because they are growing or, troublingly, because business is down. At latest count, the S&P 500's net buyback yield is 2.7%, found by netting out issuances from the volume of buybacks. Add the 1.9% [dividend yield](#) and the sum is the 4.6% shareholder yield.

Figure 3 breaks out by shareholder yield the 10-year equity returns for the major asset classes. The groups generally show green on the top and red on the bottom. The lone exception is U.S. [large caps](#), where net equity issuers and non-payers got the better of [fundamental value](#) seekers. Time will tell if this can last.

Our ETF that targets heavy ownership of companies in the high quintiles is the [WisdomTree U.S. Quality Shareholder Yield Fund \(QSY\)](#). Judging by the location of the red ink in the table above, I'm heartened that we only have 1.5% of the ETF's capital in the two "danger" quintiles.

Figure 4: Proportions of QSY in Each Quintile

Shareholder Yield Quintile	
1st Quintile (Highest Shld. Yield)	44.6%
2nd Quintile	33.8%
3rd Quintile	15.8%
4th Quintile	4.3%
5th Quintile (Lowest Shld. Yield)	0.8%
Zero & Neg. Yield	0.7%

Figure 5 shows the fundamentals for QSY. I also added the [WisdomTree U.S. Quality Dividend Growth ETF \(DGRW\)](#) in the second column for the reader's edification because it is one of our largest funds by assets under management, and it also has a shareholder yield that exceeds that of the broad market.
