What’s Hot: Yen intervention buys time, but the BOJ holds the key

Wichtige Erkenntnisse

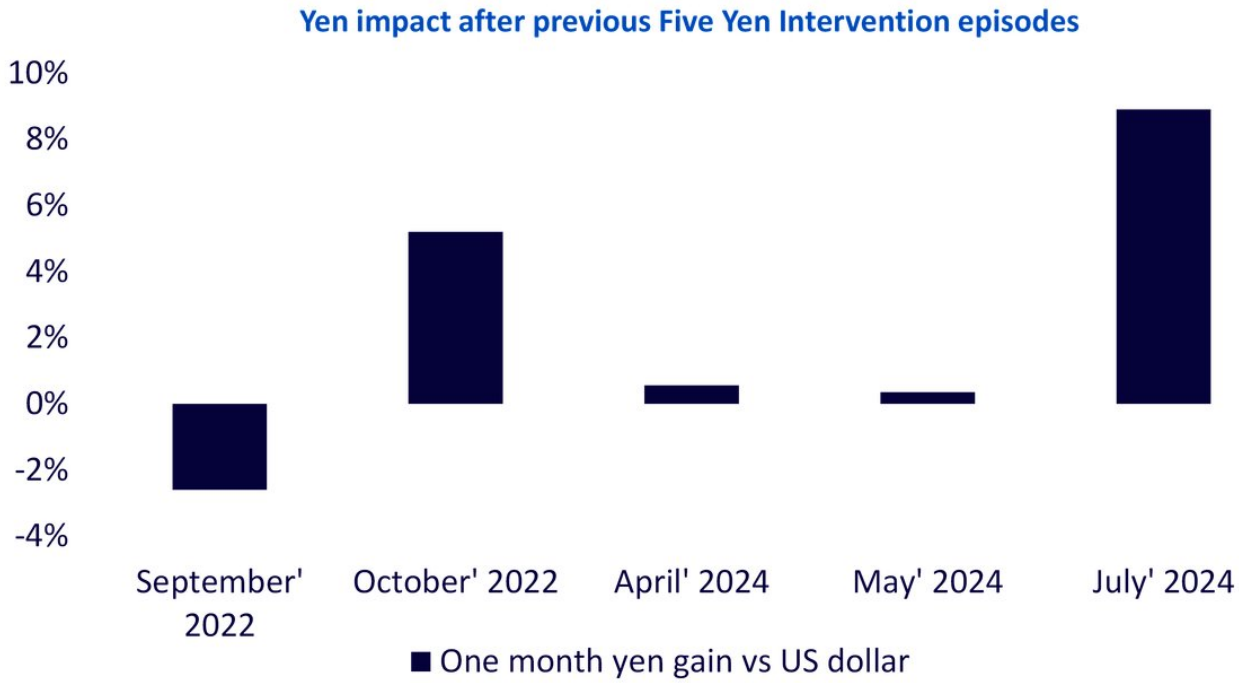

- Japan's yen intervention and rare US coordination makes it more credible than years of unilateral action
- Crowded carry-trade positioning and the psychologically important ¥155 level means a sustained break could force short-covering and exporter yen selling, amplifying near-term gains
- Intervention shifts short-term supply and demand but cannot close the US–Japan interest rate gap that underpins yen weakness
- With the policy rate at 1% and only limited further hikes priced in, the move looks more like a bridge that buys time than a new currency regime, durable yen appreciation needs faster tightening and firmer real yields

Japan’s Ministry of Finance has repeatedly intervened to support the yen over the past four years. Until now, the pattern has been familiar. Authorities stepped in, the currency rallied briefly, and depreciation resumed once markets returned to the underlying interest rate differential.

The latest intervention felt different. The move was larger, the market reversal was sharper, and Japan received support from the US. That combination gives the intervention more credibility than prior unilateral efforts. Even so, it does not remove the central problem. A durable yen recovery will ultimately require help from the Bank of Japan (BoJ).

A stronger intervention after years of limited success

Japan began its current intervention cycle in September 2022, when it bought yen for the first time since 1998. Since then, the Ministry of Finance has reportedly spent at least ¥22trn (US$139bn) supporting the currency[1], excluding the latest operation. Despite that commitment, the yen continued to weaken as the return available on dollar assets remained substantially higher than that on comparable Japanese assets.

The estimated US$52.8bn deployed would represent the largest single day intervention on record[2]. Its timing and scale indicate that the authorities are becoming less willing to tolerate disorderly depreciation. The Yen rose by 3.78% during the initial move, its sharpest 2-day advance since December 2023[3].

The changing intervention threshold is also revealing. Four years ago, markets appeared to treat roughly ¥145 per dollar as an important line for policymakers. The latest action came much closer to ¥160, suggesting that investors had become increasingly confident in testing the authorities' resolve. That confidence may now be less secure.

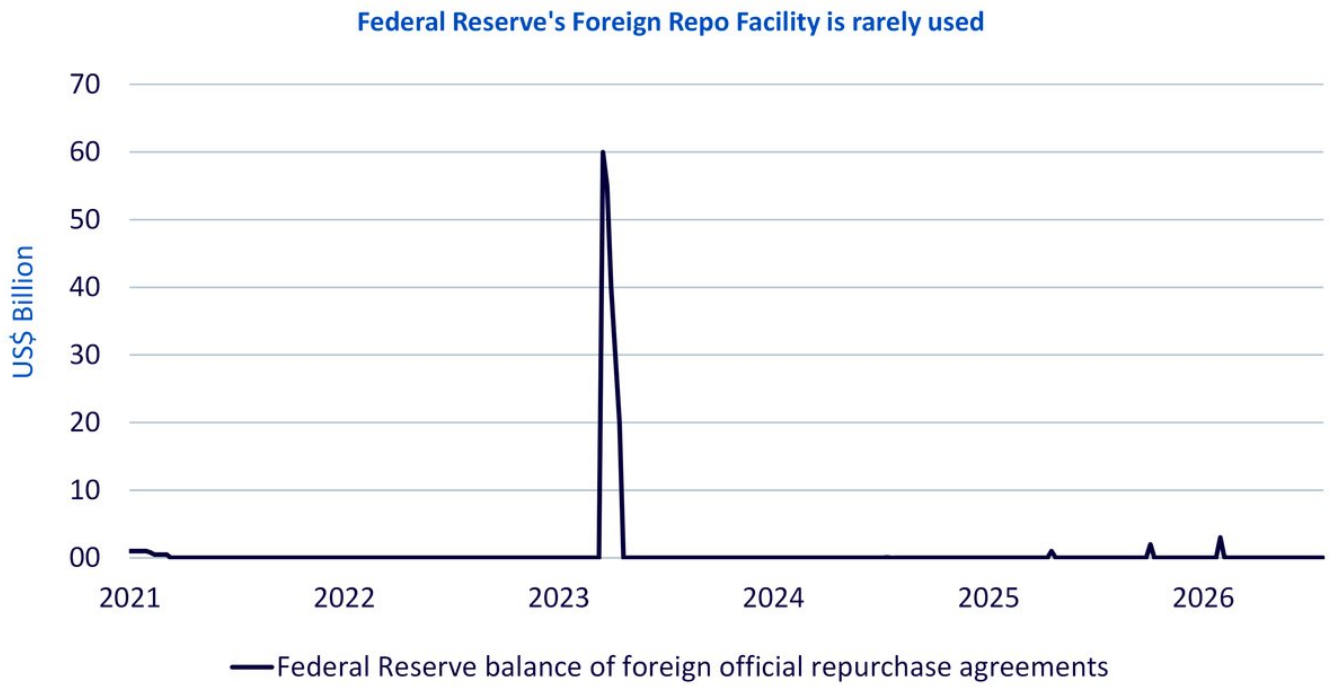

Why US participation matters

The intervention carried more weight because Japan did not act entirely alone. US involvement reportedly included rate checks and coordinated yen purchases, signalling that Washington is also concerned about the consequences of uncontrolled depreciation.

The US has several reasons to support Japan. A sharp fall in the yen could destabilise Japanese government bonds, encourage Japanese institutions to sell overseas assets, and place upward pressure on US Treasury yields. Japan is one of the largest foreign holders of US government debt, so the stability of Japanese markets has direct implications for US financial conditions.

The Federal Reserve's (Fed) Foreign and International Monetary Authorities Repo Facility, known as FIMA, could make future intervention easier to finance. Scott Bessent described the FIMA program as an important support for Japan's efforts and said: "We would encourage it to be upsized in the coming

months."[4]/Japan can pledge US Treasury securities in exchange for dollars rather than selling those bonds outright. The dollars can then be exchanged for yen.

This approach reduces the risk that intervention itself causes a selloff in US Treasuries. It is an important improvement in the mechanics of currency support, although it does not change the fundamentals determining the exchange rate.

The carry trade raises the global stakes

The yen's importance extends far beyond Japan. For years, investors have borrowed at low Japanese interest rates and invested the proceeds in higher-yielding currencies and assets. This carry trade has been one of the most reliable strategies in global markets, benefiting from both the yield differential and persistent yen weakness.

A sudden appreciation changes the calculus. Investors with short yen positions may be forced to buy the currency to close their trades, reinforcing the initial rally. That feedback loop can become disorderly, particularly when positioning is crowded.

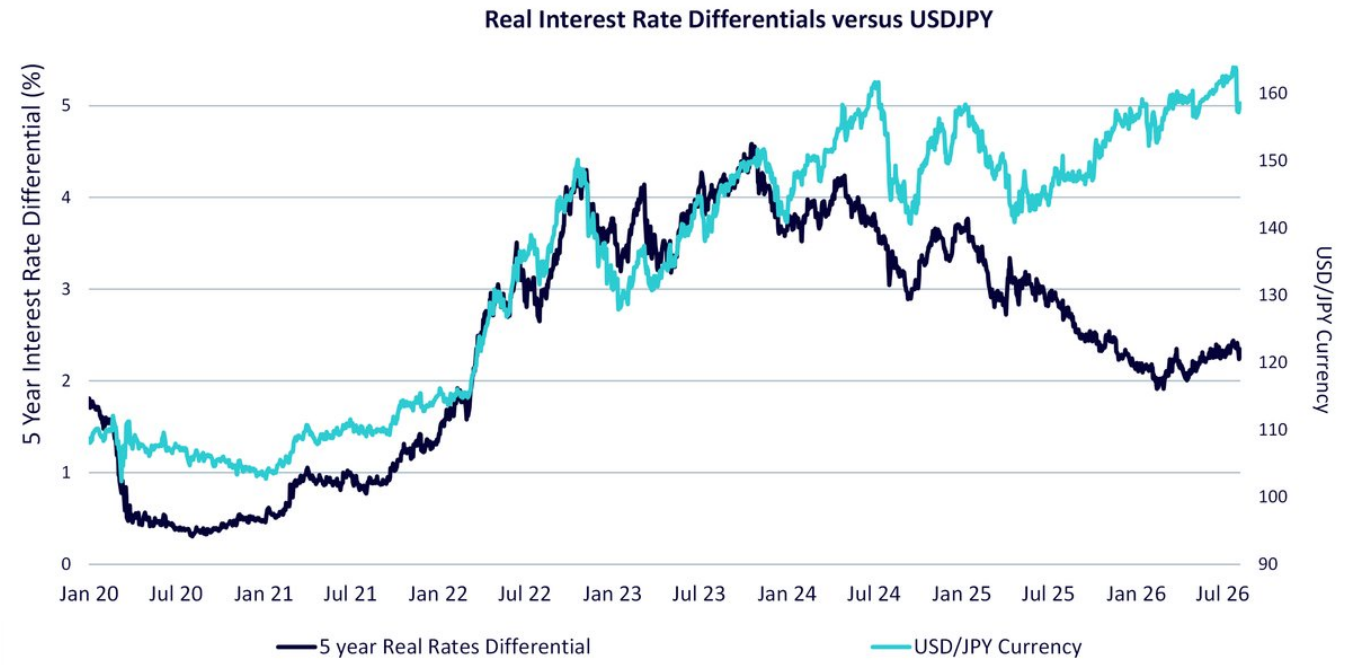

The recent intervention had already interrupted what had been a remarkably steady carry trend. The ¥155 per dollar level is a potentially important threshold. A sustained break below that level could trigger stop losses and encourage Japanese exporters to convert more overseas revenues into yen. This is one reason the latest intervention may prove more effective than previous attempts in the short run. It arrived alongside broader dollar weakness, crowded positioning and increasing official coordination.

Intervention can change behaviour, but not the rate differential

Currency intervention works by altering the immediate supply and demand balance, signalling policymakers' discomfort and raising the cost of speculative positions. It can be particularly effective when it pushes the market through widely watched technical or corporate planning levels.

The BoJ's Tankan survey suggests that many Japanese companies have based their current fiscal year assumptions on exchange rates around ¥150 to ¥155 per dollar. A sustained move below that range could lead exporters to sell dollars more actively, adding private-sector support to official intervention.

But the interest rate differential remains the dominant longer-term force. The yen's depreciation has closely tracked the widening gap between expectations for US and Japanese monetary policy. If the Fed maintains or even raises rates while the BoJ tightens only slowly, dollar assets continue to offer a large yield advantage.

Amidst the ongoing conflict in Iran, higher oil prices compound the pressure. Japan imports most of its energy, so rising crude prices increase demand for dollars and worsen the country's terms of trade. At the same time, Prime Minister Sanae Takaichi's growth-focused fiscal policy may support activity but also reinforce concerns about inflation and public finances. These forces are less likely to be offset by buying yen in the market.

The Bank of Japan remains decisive

The BoJ raised its policy rate to 1% in June, the highest level since 1995, but then held steady. Market expectations still point to a limited number of further hikes, despite the inflationary risks created by energy prices and yen weakness.

That cautious stance explains why intervention alone faces a credibility problem. If the central bank remains reluctant to narrow the yield gap, investors may eventually rebuild short yen positions once the immediate fear of further intervention fades.

The intervention creates a bridge to faster tightening. Authorities can stabilise the currency first, then reinforce that move with a more hawkish BoJ path. This would give investors a fundamental reason to hold yen rather than merely fear official action. If inflation remains persistent, wage growth stays firm and the yen again weakens sharply, the pressure on the BoJ to accelerate normalisation is likely to rise. The intervention may reinforce expectations for future rate increases while USD/JPY remains in the ¥150s.

Without that follow-through, the intervention is more likely to buy time than create a new currency regime.

Implications for Japanese equities

A sharp yen rally can create short-term volatility for Japanese exporters because overseas earnings translate into fewer yen. That can weigh on autos, machinery, electrical equipment and other globally exposed sectors.

Yet Japanese exporters are no longer straightforward currency proxies. Many manufacture close to their end markets, operate diversified production networks and possess strong pricing power in specialised industries. Their earnings depend on global demand, margins, product leadership and capital allocation as well as the exchange rate. The greater challenge for investors is therefore deciding how much currency exposure to accept alongside the Japanese equity allocation.

For investors who believe the latest intervention will support the yen only temporarily, the WisdomTree Japan Equity UCITS ETF - USD Hedged (Ticker: DXJ) offers exposure to dividend paying Japanese exporters while seeking to neutralise movements between the yen and the US dollar.

While for investors who expect the BoJ to accelerate rate hikes and believe the yen is entering a more durable appreciation cycle, the WisdomTree Japan Equity UCITS ETF (Ticker: DXJZ), provides unhedged exposure to Japanese exporters. It retains the potential benefit from yen appreciation.

The distinction reflects two different currency views:

- DXJ is better aligned with the expectation that intervention buys time but does not yet change the longer-term trend.
- DXJZ may be more appropriate for investors who believe intervention will be followed by faster BoJ tightening and sustained yen appreciation.

Intervention changes the near term, policy determines the trend

The latest operation has increased the cost of betting against the yen. US participation, the possibility of repeated intervention and access to the FIMA facility make this episode more credible than earlier unilateral efforts. Crowded positioning and the importance of the ¥155 area could also amplify further yen gains.

But intervention cannot permanently overcome monetary divergence. The Ministry of Finance can disrupt the market, and the US can improve the mechanics, but only the BoJ can materially narrow the yield gap that has underpinned yen weakness. For now, the most likely outcome is temporary yen strength followed by continued volatility. A sustained appreciation cycle would require faster rate hikes, firmer real yields and convincing evidence that monetary policy is no longer validating a structurally weak currency.

WisdomTree strongly recommends that you do not place undue reliance on these forward-looking statements.

WisdomTree Issuer ICAV

Certain funds referred to in this document are issued by WisdomTree Issuer ICAV (“WT Issuer”). WT Issuer is an open-ended, umbrella-type Irish Collective Asset-management Vehicle with segregated liability between sub-funds and is authorised by the Central Bank of Ireland (“CBI”) as an Undertaking for Collective Investment in Transferable Securities (“UCITS”) under Irish law. Each fund is represented by a separate class of shares (the “Shares”) issued by WT Issuer.

The Fund is described in a Key Information Document (KID) or Key Investor Information Document (KIID) for UK investors, and the prospectus of WT Issuer (“WT Prospectus”). A copy of the WT Prospectus and the KID / KIID is available, for EEA/UK only, in English at www.wisdomtree.eu. Where required under national rules, the KID will also be available in the local language of the relevant EEA Member State. Investors should read the WT Prospectus before investing and should refer to the section of the WT Prospectus entitled ‘Risk Factors’ for further details of risks associated with an investment in the Shares.

The summary of investor rights associated with an investment in the fund is available in English on WisdomTree Europe’s website. WisdomTree Management Limited may decide to terminate the arrangements made for the marketing of its collective investment undertakings. In such circumstances, shareholders in the affected EEA Member State will be notified of this decision and will be provided with the opportunity to redeem their shareholding in the fund free of any charges or deductions for at least 30 working days from the date of such notification.

For Investors in Switzerland:

This document/constitutes/an advertisement of the financial product(s) mentioned/herein.

The prospectus (in English only) and the key investor information documents (KID) (in German, French and Italian) are available from WisdomTree's website: https://www.wisdomtree.eu/en-ch/resource-library/prospectus-and-regulatory-reports

For WisdomTree UCITS products only: the representative and paying agent of the ETPs in Switzerland is Société Générale Paris, Zurich Branch,/Talacker/50, PO Box 5070, 8021 Zurich, Switzerland. The prospectus, the key investor information documents (KIID), the articles of association and the annual and semi-annual reports of the sub-funds are available free of charge from the representative and paying agent. As regards distribution in Switzerland, the place of/jurisdiction/and performance is at the registered seat of the representative and paying agent. Some of the sub-funds referred to in this document may not have been registered with the Swiss Financial Market Supervisory Authority ("FINMA"). In Switzerland, such sub-funds that have not been registered with FINMA may only be available to Qualified Investors.

For Investors in France:

The information in this document is intended exclusively for professional investors (as defined under the MiFID) investing for their own account and this material may not in any way be distributed to the public. The distribution of the Prospectus and the offering, sale and delivery of Shares in other jurisdictions may be restricted by law. WT Issuer is a UCITS governed by Irish legislation, and approved by the Financial Regulatory as UCITS compliant with European regulations although may not have to comply with the same rules as those applicable to a similar product approved in France. The Fund has been registered for marketing in France by the Financial Markets Authority (Autorité des Marchés Financiers) and may be distributed to investors in France. Copies of all documents (i.e. the Prospectus, the Key Investor Information Document, any supplements or addenda thereto, the latest annual reports and the memorandum of incorporation and articles of association) are available in France, free of charge at the French centralizing agent, Societe Generale at 29, Boulevard Haussmann, 75009, Paris, France. Any subscription for Shares of the Fund will be made on the basis of the terms of the prospectus and any supplements or addenda thereto.

For Investors in Malta: This document does not constitute or form part of any offer or invitation to the public to subscribe for or purchase shares in the Fund and shall not be construed as such and no person other than the person to whom this document has been addressed or delivered shall be eligible to subscribe for or purchase shares in the Fund. Shares in the Fund will not in any event be marketed to the public in Malta without the prior authorisation of the Maltese Financial Services Authority.

For Investors in Monaco: This communication is only intended for duly registered banks and/or licensed portfolio management companies in Monaco. This communication must not be sent to the public in Monaco.

For Investors in Israel: Offering materials for the offering of the Shares and securities have not been filed with or approved or disapproved by the United States Securities and Exchange Commission or any

other state or federal regulatory authority, nor has any such regulatory authority passed upon or endorsed the merits of this offering or passed upon the accuracy or completeness of any offering materials. Any representation to the contrary is unlawful. The products mentioned herein have not been approved by the Israel Securities Authority and will only be distributed to Israeli residents in a manner that will not constitute “an offer to the public” under sections 15 and 15a of the Israel Securities Law, 5728-1968 (“the Securities Law”) or section 25 of the Joint Investment Trusts Law, 5754-1994 (“the Joint Investment Trusts Law “), as applicable. The products are being offered to a limited number of investors (35 investors or fewer during any given 12 month period) and/or those categories of investors listed in the First Addendum (“the Addendum”) to the Securities Law, “Sophisticated Investors”) who in each case have provided written confirmation that they qualify as Sophisticated Investors, and that they are aware of the consequences of such designation and agree thereto; in all cases under circumstances that will fall within the private placement or other exemptions of the Joint Investment Trusts Law, the Securities Law and any applicable guidelines, pronouncements or rulings issued from time to time by the Israel Securities Authority.

This prospectus or this document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Any offeree who purchases a product is purchasing such product for its own benefit and account and not with the aim or intention of distributing or offering such product to other parties (other than, in the case of an offeree which is a Sophisticated Investor by virtue of it being a banking corporation, portfolio manager or member of the Tel-Aviv Stock Exchange, as defined in the Addendum, where such offeree is purchasing a product for another party which is a Sophisticated Investor).

Nothing in this document should be considered investment advice or investment marketing as defined in the Regulation of Investment Counselling, Investment Marketing and Portfolio Management Law, 5755-1995. Investors are encouraged to seek competent investment counselling from a locally licensed investment counsel prior to making the investment. A recipient of this document may be required to provide confirmation that it is a Sophisticated Investor purchasing a product for its own account or, where applicable, for other Sophisticated Investors.
