

Commodity investment looking for a home

Publié le 30 octobre 2024

Nitesh Shah

Head of Commodities and Macroeconomic Research, WisdomTree Europe

Points clés

- More professional investors have exposure to commodities in 2024 relative to 2023, and our survey indicates that 38% of them want to increase their exposure.
- The decline in exposure to precious metals is curious, given the stellar rally. We expect the rally to continue; thus, investors should look to return to gold and silver.
- The survey indicates that more investors have exposure to natural gas than oil. But do they have the right natural gas exposure to meet their needs?
- Industrial metals are the second-best-performing subsector of commodities this year, but fewer investors are exposed. If excess bearishness turns around, we could see further upside.

Our annual professional investor survey has revealed some interesting results. Firstly, more investors are in commodities this year (79% in 2024 vs. 71% in 2023)¹. That is unsurprising given how 2023 was tough year for commodities (especially in comparison to 2021 and 2022) and the improvement in the asset class in 2024 (Figure 1).

Figure 1: Performance across assets compared

Bonds
3.4%

Source: WisdomTree, Bloomberg. All returns are in USD. 31 Dec 20 to 4 Oct 2024. Data: Equity - MSCI World, Bond - Bloomberg Barclays Agg Sovereign TR Unhedged, Real Estate - EPRA/NAREIT Global, Bloomberg Commodity Total Return Index, Cash - US T-Bill 3 Mth. Historical performance is not an indication of future performance and any investments may go down in value.

It has been a volatile year for commodities, with some sharp rallies, punctuated by some intense corrections. Those corrections have, however, opened great buying opportunities.

Precious metals

Precious metals have led the pack in performance this year, with close to a 32% year-to-date (YTD) return on gold and a 43% YTD return on silver². Curiously, fewer investors in the survey had exposure this year than last year (Figure 2).

Figure 2: Investor survey: % of investors holding gold and precious metals

Source: WisdomTree, Censuswide. Pan-Europe Professional Investor Survey Research, a Survey of 817 professional investors across Europe, conducted June-July 2024. **Historical performance is not an indication of future performance and any investments may go down in value.**

Beyond this survey, evidence from gold exchange-traded commodity (ETC) flows corroborate that there were continuous outflows from May 2022 to May 2024 (Figure 3). However, since then we have seen inflows resume. Throughout the period of outflows, gold prices had been notching fresh highs. Clearly, some investors have missed an opportunity. But it's not too late. As we discuss in our latest gold outlook, gold will likely continue to hit new highs and our internal forecasts within our outlook point towards \$3,030/oz by Q3 2025³.

Energy

Another surprise when reading the results of this survey is that there are more investors in natural gas than oil. The gap has widened in natural gas's favour over the past year. However, in terms of assets under management (AUM), there are far more assets in European-issued oil ETCs than in European-issued natural gas ETCs (Figure 4). The survey seems to indicate that while there are fewer oil investors, they must be larger in scale to account for the higher AUMs they collectively hold.

Figure 4: European ETC AUM and Investor Exposure

Source: WisdomTree, Censuswide. Pan-Europe Professional Investor Survey Research, a Survey of 817 professional investors across Europe, conducted June-July 2024. WisdomTree's tracking of European AUM from multiple sources as of 18 October 2024. Includes delta-one and leveraged holdings. Oil includes both Brent and WTI exposures. **Historical performance is not an indication of future performance and any investments may go down in value.**

Until recently, US Henry Hub natural gas futures were the only investable ETC available on the market. So, this large pool of European investors hold a US-focused natural gas product. In September 2024 (after the survey date), WisdomTree launched a European Title Transfer Facility futures ETC. This could be a more attractive proposition for European investors hedging local energy price shocks and looking for tactical opportunities.

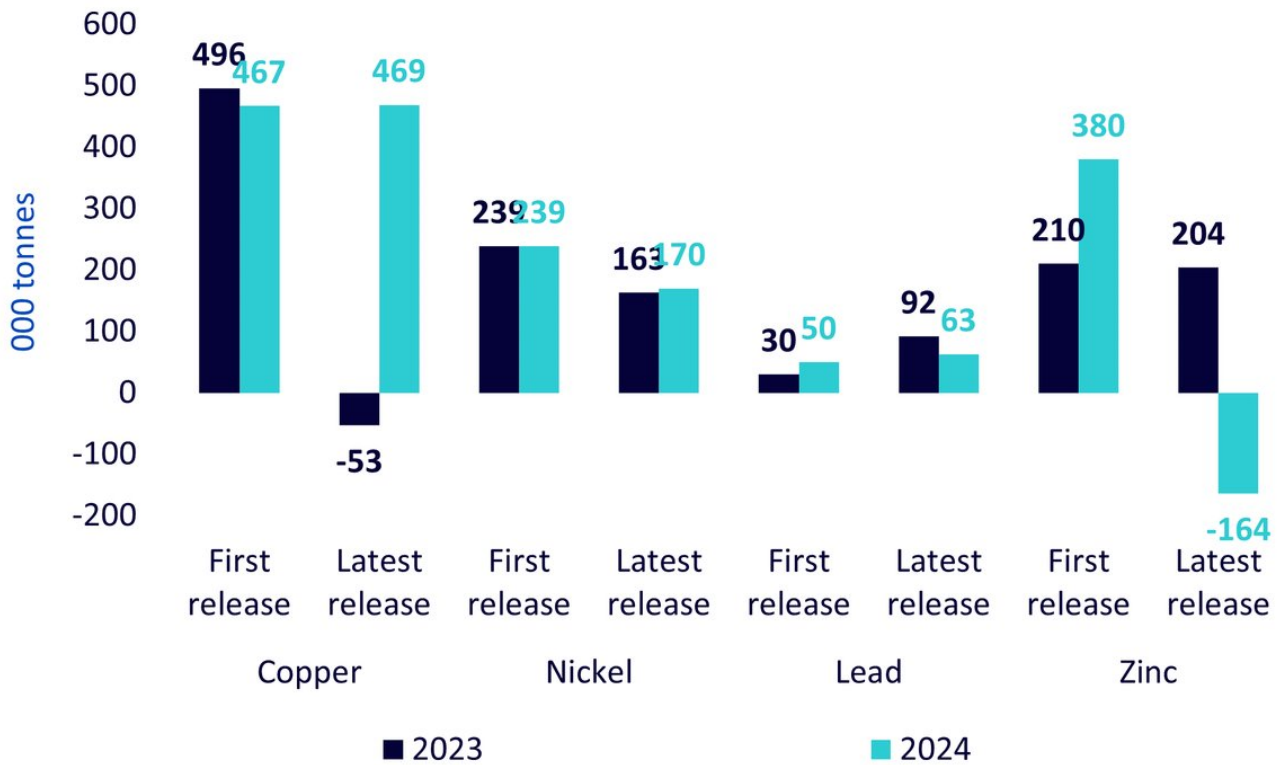

Industrial metals

Looking at industrial metals, fewer investors have exposure to the asset class in 2024 (27%) compared to 2023 (29%). With industrial metal prices falling last year and many people focusing on metal supply surpluses in 2024, sentiment has been cooling. This year, prices have been volatile but are up. Industrial metals have risen 14% YTD and are the second-best-performing commodity subsector. We believe the cooling of sentiment was premature, and some investors missed an opportunity.

We would like to point out that supply-demand balance forecasts can be wildly out at times, and investors should continue to reassess production and demand dynamics. For example, in January 2022, the International Copper Study Group predicted that there would be a 467k tonne surplus in 2023 when, in reality, we had a 53k tonne deficit (Figure 5). In October 2023, the International Lead and Zinc Study Group

predicted a 380k tonne surplus in zinc in 2024 (Figure 5). By September 2024, they revised this forecast to a 164k tonne deficit for 2024.

Figure 5: International study group supply balance forecasts

Source: International Copper Study Group, International Lead and Zinc Study Group, International Nickel Study Group, Latest forecasts from September and October 2024. **Forecasts are not an indicator of future performance and any investments are subject to risks and uncertainties.**

Broad commodities

The investor survey revealed that fewer investors were exposed to broad commodity products in 2024 (24%) than they were in 2023 (28%). In terms of ETC flows, we have also observed that investors have been more selective, opting for large exposures to individual commodities rather than baskets. That may be a consequence of more tactical trades based on high-conviction views.

However, given the many uncertainties ahead of us, a large, diversified portfolio of commodities can help diversify risk. Commodities have a low correlation with other assets and, indeed, amongst each other, making a broad basket very appealing.

Figure 6: Correlations across assets compared

Source: WisdomTree, Bloomberg. Monthly Data. All returns are in USD. September 1984 to September 2024. Data: Equity - MSCI World, Bond - Bloomberg Barclays Agg TR Unhedged, Bloomberg Commodity Total Return Index and sub-indices for its subcomponents. Historical performance is not an indication of future performance and any investments may go down in value.

Where could investors consider putting their money?

Given that, according to our survey, 38% of investors are looking to increase their commodity exposure, where could they be looking?

Gold and silver

As we discussed in our recent outlooks ([Commodity Outlook: A strong setup for precious metals](#) and [Gold Outlook to Q3 2025](#)), we are optimistic about precious metals and believe the complex has solid potential. It's not just gold that will power forward. Silver, already outperforming gold YTD, could continue to outpace its yellow cousin, given that it could get a tailwind from increasing industrial demand, especially from the photovoltaics sector.

[WisdomTree Core Physical Gold \(WGLD\)](#) and [WisdomTree Physical Swiss Gold \(SGBS\)](#), with management fees of 12 basis points (bps) and 15 basis points (bps), respectively, offer very low-cost access to the asset class, with its physically backed nature removing all adverse effects of negative roll yield from the investment.

Strategic metals

An energy transition, a data centre and artificial intelligence (AI) boom and a rapid rollout of 5G technology will all be a metal-intensive demand story. This could all be super-charged with China following through with the fiscal stimulus its economy needs, and many expect the government to maintain its growth targets. China's industrial policy in recent years has shifted from expanding city limits to the energy transition. We believe that it is more beneficial to base metals like copper, aluminium and zinc rather than iron ore (a construction-driven material).

[WisdomTree Energy Transition Metals \(WENT\)](#) offers a basket of metals whose demand will be lifted by the energy transition. The metals' weights are driven by the scale of growth in the transition, corrected for supply surpluses. We believe the Chinese stimulus, AI, and 5G boom will provide additional tailwinds to the metals.

European natural gas

As we discussed earlier, European ETC Investors have a new tool to match their needs, a product exposed to the Dutch Title Transfer Facility (TTF) benchmark. TTF gas prices are up 25% YTD, while US-focused Henry Hub (HH) prices are down 9%. Given that 30% of European investors in the survey have exposure to natural gas (most of which will be to US Henry Hub, given the absence of a TTF ETC product at the time of the survey), we believe they could consider a product that may more closely match their needs⁴.

In recent years, energy-priced shocks have hit Europe harder than the US, spiking European gas prices by a greater amount. With the European gas system more reliant on storage than ever, gas prices are likely to be more volatile. Natural gas stores in Europe are 95% full⁵, but that only equates to 29 days of consumption, so if Europe is hit by any outages of liquified natural gas shipments, it remains vulnerable. This time last year, natural gas storage levels were 98% full, and we had a mild winter. There is no guarantee of a mild winter again. In fact, a La Niña weather pattern, which has a 60% chance of forming this winter according to the National Oceanic and Atmospheric Administration's Climate Prediction, usually brings colder weather.

[WisdomTree European Natural Gas \(TTFW\)](#) offers a unique and compelling opportunity for tactical investments and hedging tools. Through this ETC, we have once again democratized access to a coveted asset class. Prior to the launch of our product in September 2024, investors would have had to access the futures market directly or find equity proxies to get exposure.
