Points clés

- **US equities lead:** in 2024, US equities outperformed, driven by robust corporate earnings and supportive fiscal policies.
- **Growth factor dominance:** Growth stocks maintained their lead, particularly in the US (for a second year in a row), though elevated valuations raised doubt on a possible trifecta for 2025.
- **Factor diversification:** focusing on Value, Growth and Quality could be the key to defend against possible instability in the year ahead.

Looking back at 2024, global equity markets remained resilient despite a challenging final few weeks. US equities led both annually and quarterly, buoyed by robust corporate earnings, supportive fiscal policies, and market optimism following the Republicans' red sweep in November. In contrast, European and emerging markets exhibited more modest performances, influenced by political uncertainties.

From a factor perspective, Growth stocks maintained their leadership, particularly within the US market. However, concerns regarding elevated valuations persist, prompting discussions about the sustainability of this trend.

This instalment of the WisdomTree Quarterly Equity Factor Review examines how equity factors behaved during the fourth quarter and their potential impact on investors' portfolios.

Performance in focus: back to Growth

Equity markets stalled in the latter half of Q4 2024 after a strong start, leading to negative performances across most regions. The MSCI Emerging Markets Index declined by 8%, as trade war concerns and a

weak Chinese economy weighed on sentiment. Political instability in South Korea and Europe, notably in France and Germany, contributed to the MSCI Europe Index's 2.7% loss. US equities proved most resilient, supported by Donald Trump's victory and two rate cuts in November and December, closing the quarter with a 2.7% gain¹.

On the factor front, the Q3 rotation faded quickly:

- Growth posted the strongest returns in most regions (US, Developed World, and Emerging Markets).
- Europe stood out, with Momentum and Value dominating over the quarter.
- Quality continued to suffer across all developed markets, extending the Q3 trend.
- In the US, Value and High-Dividend stocks experienced significant underperformance, impacting world equities due to the US' substantial weight.
- Size also underperformed in developed markets but to a lesser degree.
- In Emerging Markets, High Dividend performed well, solidifying its position as a medium- to long-term leader. Momentum and Minimum Volatility also showed notable performances.

2024 in review: another growth year

Despite a weaker Q4, 2024 was strong for equities. Central banks initiated easing cycles, inflation receded, and corporate earnings remained robust, defying early-year predictions of slowdowns or recessions. The US achieved the strongest gains at 24.6%, while Europe (8.6%) and Emerging Markets (7.5%) lagged.

Factor-wise, while the year was less uniform than 2023, Growth dominated, especially in the US:

- Growth posted the strongest return in the US and top-three finishes in Developed and Emerging Markets.

- Momentum was a standout in World, Europe, and Emerging Markets, driven by an exceptional first half of 2024.
- In the US, Value underperformed the most, followed by High Dividends.
- In Europe, Quality had the worst returns, with Size and Growth just behind.
- Notably, Quality experienced one of its worst performances in years, underperforming across all regions.
- In Emerging Markets, High Dividend continued to perform well, finishing second for the year with a 3.5% outperformance.

Growth in the US is becoming expensive

In Q4 2024, US market valuations increased, with the price-to-earnings (P/E) ratio rising by 0.7. Growth stocks became even more expensive, with the P/E ratio climbing by 4.4 to 38.8. Years of dominance have led to high valuations for major growth names. In Europe and Emerging Markets, valuations declined, with overall valuations appearing inexpensive by historical standards. Value and High Dividend stocks are priced at P/E ratios of 10 or lower.

Looking forward to 2025

2024 marked a second year of Growth dominance. However, market behaviours differed, with Momentum posting the second-best results, unlike Quality's second-place finish in 2023. As we look to 2025, while maintaining a constructive view on equities, concerns about Growth stock valuations persist. Investors may benefit from diversifying factor exposure across Growth, Value, and Quality, anticipating multiple micro factor rotations.
