

What's Hot: China's anti-involution drives the lithium market

Published 15 August 2025

Key Takeaways

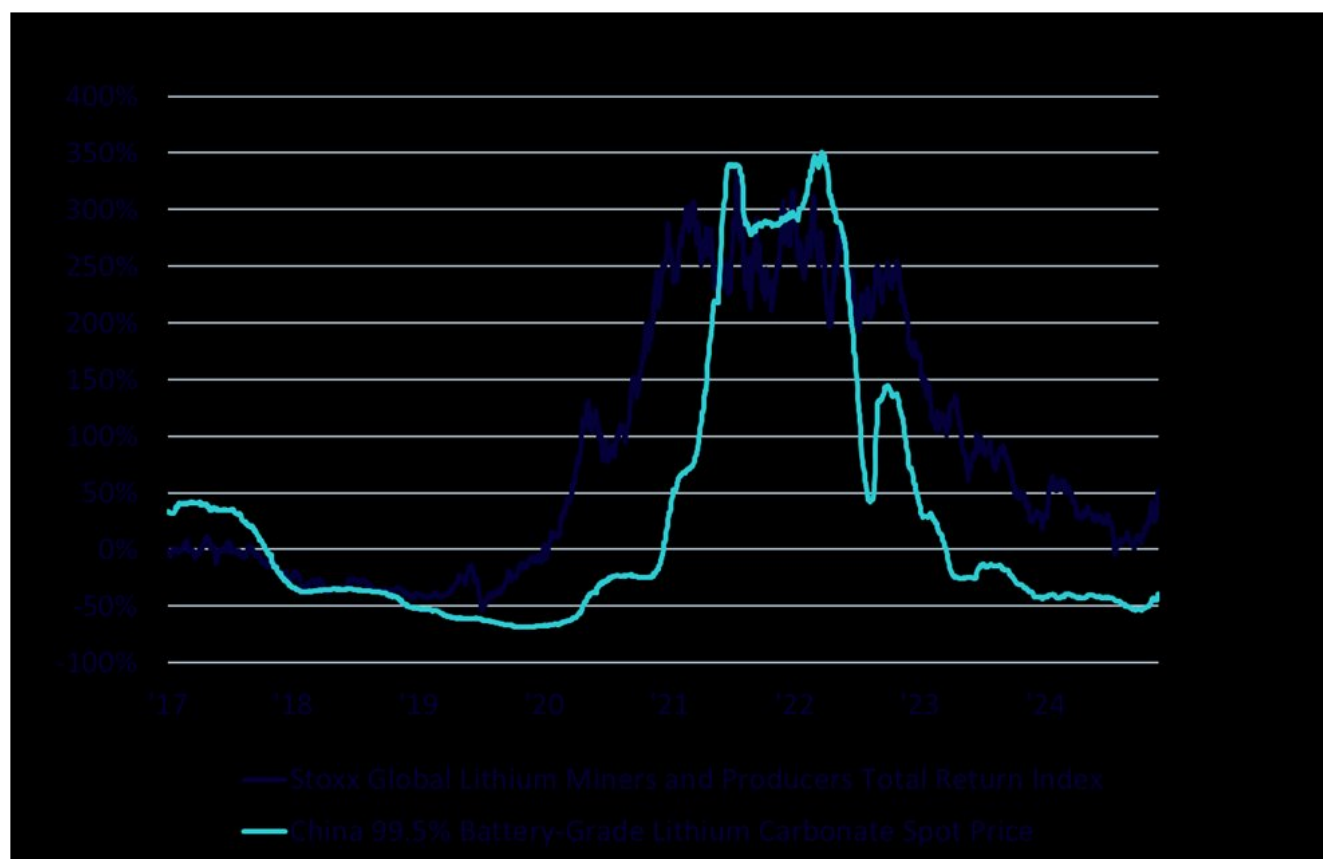

- CATL mine shutdown sparks price jump – The halt of a major Chinese lithium mine, representing around 3% of global supply, drove an immediate spike in lithium prices after a stretch of oversupply.
- Price swings have defined the lithium market – Lithium prices cycled from lows in 2020 to record highs in 2022, and back to lower levels, showing how slow supply growth and shifting demand create extreme volatility.
- China's "anti-involution" policy emerges – The move aligns with Beijing's efforts to curb overcapacity and intense price competition in key industries, including lithium mining.
- Lithium market faces ongoing volatility – While the shutdown lifted prices, new mining capacity and evolving demand trends mean the market's path to balance remains uncertain.

CATL's surprising mine shutdown

Chinese battery giant Contemporary Amperex Technology Co. Ltd. (Ticker: CATL) surprised the markets in early August when it halted operations at one of its major lithium mines in Jiangxi province. The mine's output accounts for an estimated 3% of global lithium supply.¹

Bloomberg reported on Sunday, August 10, that the company had "failed to extend a key mining permit." By the end of the following Tuesday, the Chinese spot price for battery-grade lithium carbonate, a critical raw material used in the production of lithium-ion batteries, had jumped 8.5%. Over the same period, shares of global lithium miners and producers, as measured by the Stoxx Global Lithium Miners and Producers Index, rose 9.2%.²

To put events into perspective, we look back to July 2020: Lithium prices for battery-grade lithium carbonate had fallen to just \$5600 per metric tonne, a level caused by global oversupply and too low for lithium producers to generate profits.

About the same time, global investor focus began shifting towards the energy transition. Clean energy, green transportation, and battery technologies became one of the hottest investment themes of 2020 and 2021, with belief in the potential mass adoption of electric cars manifesting in Tesla's surging share price and global EV sales growth projections. Investors quickly realized that the key to achieving such growth was the lithium-ion battery production and thus access to lithium.

Two years and a breathtaking price rally later, the Chinese lithium carbonate spot price reached \$80,000 metric tonnes, 14 times its 2020 low. In parallel, shareholders of lithium miners and producers saw their investments more than triple (Figure 1).

A key challenge of the lithium market is its price-inelastic supply, meaning production is difficult to scale quickly to meet rising demand. In 2020, experts estimated that it takes about 5 years to develop a new lithium mine.³ Nevertheless, the newly lucrative price environment motivated miners and producers to

accelerate the expansion of their capacity, leading to an almost doubling of refined lithium supply from 2022 to 2024 (Figure 2).

Figure 2: Global refined lithium supply and demand forecast

Source: Bloomberg as of 31 March 2025. The units for lithium are thousand metric tons of lithium chemical equivalent and include lithium carbonate and lithium hydroxide. **Historical performance is not an indication of future performance and any investments may go down in value.**

Once this new capacity came online, it began to squeeze margins, as lithium prices fell below \$9,000 per metric tonne in 2025, levels last seen in 2020. According to energy transition expert Wood Mackenzie⁴ and data from Bloomberg (Figure 2), the global lithium surplus is expected to peak only toward the end of the decade. Coupled with slower-than-expected EV sales growth in the U.S.⁵, there was little to suggest a reversal in the downward trend of lithium prices.

The emergence of the “anti-involution” theme

In early July, the term “anti-involution” began appearing in investment banks’ analysts’ notes and research reports, describing an emerging trend in China’s industrial policy.⁶

Loosely translated, “anti-involution” refers to efforts to combat overcapacity and intense price competition.

Lithium mining serves as a good example, with China accounting for 12% of global mining output and 53% of refined lithium carbonate and hydroxide.⁷ Margins for lithium producers have been thin, and looming trade barriers could drive competition further toward the domestic market, adding pressure on local players.

In July, news emerged that Chinese lithium miners were facing increased regulatory scrutiny, raising concerns that mining rights might be used as a tool to control supply.⁸ The announcement of CATL's mine shutdown due to missing operating permits confirmed market participants' thesis on the anti-involution of China's mining industry, triggering a sharp rally in both lithium spot prices and global mining stocks (Figure 3).

With the anti-involution theme seemingly taking hold in the lithium market, it's not the only commodity where China's industry policy can alter supply and demand dynamics. For example, rare earth miners may face similar supply-side scrutiny, as China accounts for nearly 70% of global rare earth mining and almost 90% of global processing.⁹

Conclusion

The lithium market has been characterized by dramatic price swings, shifting from oversupply to tightness and back to oversupply. Lithium miners' bottom lines may find a glimmer of hope if China's emerging anti-involution policy succeeds in curbing oversupply and halting the deflationary trend in lithium prices.

The recent shutdown of CATL's mine may be a first serious indication of China's commitment to follow through. If sustained, such measures could help stabilize prices, restore margins, and potentially reshape the competitive landscape for both domestic and global lithium producers. However, with EV demand growth slowing in key markets and new mining capacity still in the pipeline, the road to balance will likely continue to be volatile.

WisdomTree Issuer ICAV

The products discussed in this document are issued by WisdomTree Issuer ICAV ("WT Issuer"). WT Issuer is an umbrella investment company with variable capital having segregated liability between its funds organised under the laws of Ireland as an Irish Collective Asset-management Vehicle and authorised by the Central Bank of Ireland ("CBI"). WT Issuer is organised as an Undertaking for Collective Investment in Transferable Securities ("UCITS") under the laws of Ireland and shall issue a separate class of shares ("Shares") representing each fund.

The Fund is described in a Key Information Document (KID) or Key Investor Information Document (KIID) for UK investors, and the prospectus of WT Issuer ("WT Prospectus"). A copy of the WT Prospectus and the KID / KIID is available, for EEA/UK only, in English at www.wisdomtree.eu. Where required under national rules, the KID will also be available in the local language of the relevant EEA Member State. Investors should read the WT Prospectus before investing and should refer to the section of the WT Prospectus entitled »Risk Factors¼ for further details of risks associated with an investment in the Shares.

The [summary of investor rights](#) associated with an investment in the fund is available in English on WisdomTree Europe's website. WisdomTree Management Limited may decide to terminate the arrangements made for the marketing of its collective investment undertakings. In such circumstances, shareholders in the affected EEA Member State will be notified of this decision and will be provided with the opportunity to redeem their shareholding in the fund free of any charges or deductions for at least 30 working days from the date of such notification.

For Investors in France:

The information in this document is intended exclusively for professional investors (as defined under the MiFID) investing for their own account and this material may not in any way be distributed to the public. The distribution of the Prospectus and the offering, sale and delivery of Shares in other jurisdictions may be restricted by law. WT Issuer is a UCITS governed by Irish legislation, and approved by the Financial Regulatory as UCITS compliant with European regulations although may not have to comply with the same rules as those applicable to a similar product approved in France. The Fund has been registered for marketing in France by the Financial Markets Authority (Autorité des Marchés Financiers) and may be distributed to investors in France. Copies of all documents (i.e. the Prospectus, the Key Investor Information Document, any supplements or addenda thereto, the latest annual reports and the memorandum of incorporation and articles of association) are available in France, free of charge at the French centralizing agent, Societe Generale at 29, Boulevard Haussmann, 75009, Paris, France. Any subscription for Shares of the Fund will be made on the basis of the terms of the prospectus and any supplements or addenda thereto.

Notice to Investors in Switzerland – Qualified Investors
