

# US tariffs and China's economic strategy: what it means for commodities

Published 11 November 2024

## Nitesh Shah

Head of Commodities and Macroeconomic Research, WisdomTree Europe

## Key Takeaways

- Higher tariffs, more oil production and a stronger Dollar are on the cards following Trump's US Presidential election win.
- There was great anticipation of a bazooka sized stimulus from China's National Party Congress meeting. Unfortunately, markets were disappointed with how narrow the stimulus announcement actually was.
- We believe that China has kept dry powder aside for further stimulus that it can deploy once it knows the extent of tariff headwinds.
- Although commodities fell on the announcements, it has bounced quickly as well. The dips could open up nice entry points for metals in particular.

The headlines from last week were negative for commodities:

- A new Trump Presidency points to higher tariffs, more US oil and gas production and a stronger Dollar.
- China's fiscal package failed to impress.

While commodity prices fell on both announcements, they bounced relatively quickly. Price dips appear to be good entry points, especially if China has left dry powder for a further stimulus in the event of aggressive tariffs.

## Bloomberg Commodity Index

Source: WisdomTree, Bloomberg. 1am GMT, 1 November – 12 noon GMT, 8 November. President Trump was announced the winner of the US Presidential Election by the Associated Press around 10.30 GMT. National People's Congress Press conference took place at 8am GMT. **Historical performance is not an indication of future performance, and any investments may go down in value.**

## A new Trump Administration

US President Elect Trump and his running mate, Vance led their campaign platform as **trade hawks**.

- Trump has floated the idea of a 10% or more tariff on all goods imported into the US, a move he says would eliminate the trade deficit.
- He has threatened to impose a 200% tariff on some imported cars, saying he is determined in particular to keep cars from Mexico from coming into the country.
- He proposes phasing out Chinese imports of goods such as electronics, steel and pharmaceuticals over four years. He seeks to prohibit Chinese companies from owning US real estate and infrastructure in the energy and tech sectors. A 60% tariff on all Chinese made goods has been floated.

Trump and Vance are also proponents of **more domestic oil and gas production**.

- Trump has vowed to increase US production of fossil fuels by easing the permitting process for drilling on federal land and would encourage new natural gas pipelines. He has said he would reauthorise oil drilling in the Arctic National Wildlife Refuge in Alaska.

## Lower trade hurts commodities

As we highlight in our [Commodity Outlook](#), lower global trade has historically been negative for commodity prices. The previous Trump Administration-driven trade wars led to a 11% decline in commodity prices in 2018 (based on Bloomberg Commodity Indices).

Trump's willingness to use Section 301 of the Trade Act of 1974 to expedite trade restrictions was demonstrated in his last presidency, so he may act quickly in delivering his promises.

## Global oil oversupply

Global oil markets are already over-supplied and the Organization of Petroleum Exporting Countries (OPEC)'s willingness to sit and watch the US take a larger share of global demand is wearing thin. OPEC has already announced that they will unwind their production restraint that has kept the market in balance over the past two years. On 3 November, they had announced that they will delay the unwind until the end of the year, but it is unclear if they will keep postponing it. Giving up market share has been a painful act, as Saudi Aramco demonstrated last week with a 15% drop in Q3 profits<sup>1</sup> from a year ago.

Oil demand weakness stems from China. In 2023 the China accounted for 70% of oil demand growth. This year, it likely only account for 20% of growth<sup>2</sup>. To be clear, oil demand growth in 2024 is likely to be under 1 million barrels per day, less than half the 2 million barrels per day growth in 2023<sup>3</sup>. We are not expecting a significant pickup in oil demand growth in 2025 either. China's economy has been weak, and it is electrifying quickly too, reducing its reliance on imported oil.

Whether US producers will expand oil production, even if they have the Federal approvals, is another question. Weak prices may discourage them. But we don't think OPEC will want to encourage them by boosting prices through aggressive supply tightness.

## China's National People's Congress meeting

The Standing Committee of the National People's Congress (NPC) concluded its week-long meeting on 8 November with an announcement of a **programme to refinance local government debt**. The programme consists of 6 trillion yuan (\$839 billion) in new bonds over three years and a further 4 trillion yuan (\$558 billion) in previously announced bonds over five years to restructure their finances. In September its central bank, the People's Bank of China, injected a high dose of monetary stimulus and markets were expecting a fiscal follow-through from the government. Apart from the local government debt refinancing programme the NPC offered **no additional announcements of measures to directly stimulate its domestic economy**. The package therefore disappointed the markets.

China, as a key target for the new Trump Administration's trade policy is likely to suffer an economic blow. It is barely healing from the real estate implosion it has suffered over the past two years. China had a choice

to get ahead of the tariffs by boosting its domestic economy beforehand. It appears it has chosen to wait and see how damaging the trade restrictions will be before offering its next big move.

## New entry points

We believe the new Administration could begin the process of implementing tariffs shortly after Trump's inauguration on 20 January 2025. With Republicans controlling the Senate and looking hopeful to have a House of Representatives majority, he may get the backing he needs relatively swiftly.

So, we believe that China will need to deploy its countermeasures relatively soon. Its best option is to stimulate its domestic economy rather than engage in big tit-for-tat trade restrictions. In the last trade war, it restricted US soybean imports. But back in 2017 China sourced a third of its soybean imports from the US<sup>4</sup>. Now it only imports a fifth from the US<sup>5</sup>, watering down this threat. China may continue to restrict exports of its own materials that are strategically important, like it has done with gallium, germanium and graphite, but these could be met with further hostility from the US.

If this stimulus is forthcoming, the commodity price dips could open up good entry points in metals.

Oil is less clear-cut given China's desire to electrify. But a rapid pickup in energy needs won't be met by electrification alone and hence we think oil could benefit, if OPEC doesn't use the opportunity to drive up its market share.

## Implementation

WisdomTree has a range of base metal exchange-traded products which could benefit from China using its dry powder in due course. Some examples include:

[WisdomTree Copper \(COPA\)](#) and [WisdomTree Aluminium \(ALUM\)](#) which are fully collateralised, UCITS eligible exchange-traded commodities (ETCs) based on single commodities. [WisdomTree Energy Transition Metals \(WENT\)](#) and [WisdomTree Industrial Metals Enhanced \(META\)](#) provide exposure to baskets of metals. WENT leans into the energy transition and weights each metal by their demand profile in the transition. META uses roll optimisation to reduce drag from markets in contango (upward sloping futures curves).

## WisdomTree Multi Asset Issuer PLC

WisdomTree Multi Asset Issuer PLC (the “Issuer”) issues products under a Prospectus (“WTMA Prospectus”) approved by the Central Bank of Ireland, drawn up in accordance with the Directive 2003/71/EC. The WTMA Prospectus has been passported to various European jurisdictions including the UK, Italy and Germany and is available on this document.

WisdomTree Multi Asset Issuer PLC Exchange Traded Products (“ETPs”) are suitable for financially sophisticated investors who wish to take a short-term view on the underlying indices and can understand the risks of investing in products offering daily leveraged or daily short exposures.

ETPs offering daily leveraged or daily short exposures (“Leveraged ETPs”) are products which feature specific risks that prospective investors should understand before investing in them. Higher volatility of the underlying indices and holding periods longer than a day may have an adverse impact on the performance of Leveraged ETPs. As such, Leveraged ETPs are intended for financially sophisticated investors who wish to take a short-term view on the underlying indices and understand such risks. As a consequence, WisdomTree is not promoting or marketing WisdomTree Multi Asset Issuer PLC ETPs to retail clients. Investors should refer to the section entitled “Risk Factors” and “Economic Overview of the ETP Securities” in the WTMA Prospectus for further details of these and other risks associated with an investment in Leveraged ETPs and consult their financial advisors as needed. Neither WisdomTree, nor the Issuer has assessed the suitability of any Leveraged ETPs for investors other than the relevant Authorised Participants.

Short and leveraged exchange-traded products are only intended for investors who understand the risks involved in investing in a product with short and/or leveraged exposure and who intend to invest on a short term basis. Any investment in short and/or leveraged products should be monitored on a daily basis to ensure consistency with your investment strategy. You should understand that investments in short and/or leveraged exchange-traded products held for a period of longer than one day may not provide returns equivalent to the return from the relevant unleveraged investment multiplied by the relevant leverage factor. Potential losses in short and/or leveraged exchange-traded products may be magnified in comparison to investments that do not incorporate these strategies. Please refer to the section entitled “Risk Factors” in the relevant prospectus for further details of these and other risks associated with an investment in short and/or leveraged exchange-traded products. You should consult an independent investment adviser prior to making an investment in short and/or leveraged exchange-traded products in order to determine its suitability to your circumstances.
