What's happened in the Contingent Convertible (CoCo) markets recently? CoCo bonds have been at the centre of attention in the new issuance space in recent months, driven by a surge in issuance volume. Notably, September witnessed particularly heavy activity in the CoCo market, with significant issuance from major financial institutions. For example, Nordea's €1 billion issuance was met with overwhelming demand, receiving orders worth €11 billion, signalling strong investor appetite for these hybrid instruments¹. This issuance surge reflects the attractive yield that CoCos offer in the current interest rate environment. CoCos are wanted.

Another notable trend in the CoCo market has been the continued occurrence of issuer calls, regardless of the backend yields. This phenomenon underscores the strength of the “pull-to-par” effect in the market. Issuers are choosing to exercise their call. The consistent call activity supports investor confidence, as many CoCo bonds are trading with the expectation of early redemption. The anticipation of these calls helps stabilise prices and reduce downside risk for investors as the likelihood of receiving par value at the call date becomes increasingly probable.

In addition, there is still a curious disconnect in the market between bank fundamentals and CoCo bond pricing. Over the past 5 to 10 years, bank balance sheets have significantly strengthened, partly due to the higher interest rate periods that we have seen. This has not been fully accounted for, and this

lack of repricing suggests that investor perceptions have lagged behind the reality of the improved bank fundamentals.

The combination of high yields, active issuer calls, and improving bank fundamentals positions CoCo bonds as a potentially attractive asset class in this current interest rate environment.

The WisdomTree AT1 CoCo Bond Strategy is based on the iBoxx Contingent Convertible Liquid Developed Europe AT1 Index. It offers a combination of higher yield derived from capital subordination (not from riskier issuers), low duration, and portfolio diversification. The yield per unit duration of CoCos has historically ranked high among peers, offering investors an attractive risk-return profile, as shown in Figure 1 below.
