

# Time in the market beats timing the market

Published 5 February 2024

Head of Research, WisdomTree Europe.

The end of each year brings long-awaited traditions like thanksgiving turkeys, Saint Nicholas, Christmas trees, Hanukkah's menorah and New Year's fireworks. For investors, one of those traditions is the equity forecast for the following year. Recently, as I was reading predictions for 2024, I started to wonder how accurate last year's predictions had been.

### Predicting short term moves in the market is a fool's errand

In Figure 1, I compiled predictions from 16 forecasts published at the end of 2022 by different banks and asset managers across the spectrum. As a reminder, the S&P 500 gained 24.2% over the full year in 2023. The results are telling:

- The dispersion is massive, with a 21% spread between the most pessimistic and the most optimistic, with everything in the middle
- Not one expert got it even close to right. Some predictions ended up 28% off

So, what should we conclude from this little anecdote? I think we should acknowledge that when it comes to short term moves in markets, "nobody knows anything", and that the successful investors are long-term investors that aim to harness the equity risk premium, over the long term, through time-proven, consistent strategies. In the words of Kenneth Fisher, "Time in the market beats timing the market".

### Investing for the long term: core strategies anchored around academically proven risk premium

Academics have demonstrated again and again that systematically investing in factor portfolios would have outperformed the market over the long term. Investing in high-dividend stocks, high-quality stocks, or cheap stocks in a systematic manner gives investors one of the keys to outperforming the market. It is worth noting that academic research has shown that the expected outperformance yielded by such approaches has not meaningfully decreased over time, with markets becoming more efficient.

[WisdomTree Quality Dividend Growth](#) strategies are a good example of how using this decade-long research can help outperform the market and grow investors' wealth over the long term. Every strategy in this range (global equities, US equities, Eurozone equities, UK equities) has outperformed the market since launch. One of the reasons for this success is that the investment process is rooted in academic

literature and focuses on the systematic selection of a diversified basket of highly profitable companies with solid dividend-paying credentials, leaning heavily into the Quality and High Dividend factors.

### **WisdomTree Quality Dividend Growth: a core equity strategy with a proven track record to beat the market over the long term and across regions**

Our portfolios are constructed around dividend paying companies with the best combined rank of earnings growth, return on equity and return on assets within an ESG-filtered universe of companies with sustainable dividend policies. Stocks are also risk-tested using a proprietary risk screen (Composite Risk Score), which uses quality and momentum metrics to rank companies, screening out the riskiest companies and potential value traps. Each company is then weighted based on its cash dividend paid (market capitalisation x dividend yield), which introduces valuation discipline in this high-quality portfolio.

Figure 2 illustrates the historical average relative performance of different global equity factors depending on volatility regimes. We observe that some factors, like Min Volatility, are fundamentally defensive. They outperform a lot when volatility is high (and usually markets are down) but they struggle and underperform significantly in bull markets where volatility is low. On the contrary some factors, like Small Caps, are very cyclical. They do well in periods of low volatility but exhibits deeper drawdowns in high volatility markets which take a long time to recover from.

### **Figure 2: Average relative performance of different global equity factors depending on volatility regimes**

*Source: Bloomberg, WisdomTree. Data as of 30 September 2002 to 31 December 2023. Using Days data in US dollars. Calculations are in USD. The inception date for the WisdomTree Global Quality Dividend Growth Index (WisdomTree Quality) is 16 Oct 2015. You cannot invest in an index. Above numbers include backtested data. Historical performance is not an indication of future performance and any investments may go down in value. Factors here are using MSCI World based Factors except for WisdomTree Quality.*

WisdomTree's approach to Quality offers a very balanced mix with strong outperformance in high volatility markets, helping to reduce drawdowns and time to recovery but also some outperformance in other volatility regimes. This combination is what we tend to call 'all-weather'. Such a strategy can be used comfortably as a strategic holding to put time in the market as it capture most of the upside, while also protecting on the downside.

### **Key Takeaways**

Looking forward to 2024, S&P 500 predictions remain incredibly diverse from 4,200 (-12%) by JP morgan to 5,100 (+7%) for Deutsche Bank. Uncertainty in the markets also remains at very high level. US monetary policy remains extremely volatile and around half the world's population will vote in 2024, including the US in November. Overall, and as always, it looks like core, resilient equity investments that do not rely on knowing the future should be investor's best friends. Long term in Quality and High Dividend could continue to be the best answer for long-term minded investors.
