

WisdomTree International Hedged Equity Fund Restructuring

WisdomTree, an innovator in the ETF market, announced a change to one of its international Funds to create a more unique and focused solution for an important investment theme. The new hedged currency strategy aims to provide exposure to European dividend-paying exporters, while hedging out the movements of the euro relative to the U.S. dollar.

Which Fund is being restructured?

The WisdomTree International Hedged Equity Fund will be renamed the WisdomTree Europe Hedged Equity Fund and will also have an objective change to reflect the change in the underlying Index the Fund is designed to track.

What is the nature of the change?

The new restructured Fund will become more focused on a particular investment theme. The Fund changes from a broad-based developed international portfolio of dividend-paying stocks that had hedged currency exposure to multiple developed world currencies to an export-oriented European portfolio of dividend-paying equities that hedges exposure to movements of a singular currency, the euro relative to the U.S. Dollar.

When will the change occur?

Beginning on or about August 29, 2012, the Fund will pursue the change in investment objective and strategies previously outlined and will be renamed the WisdomTree Europe Hedged Equity Fund.

What is the stated objective?

The WisdomTree Europe Hedged Equity Fund seeks investment results that closely correspond to the price and yield performance, before fees and expenses, of the WisdomTree Europe Hedged Equity Index (the "Index").

What is the Index Methodology?

The Index is designed to provide exposure to European equities while at the same time neutralizing exposure to fluctuations between the euro and the U.S. dollar. In this sense, the Index "hedges" against fluctuations in the relative value of the euro against the U.S. dollar. The Index is designed to have higher returns than an equivalent non-currency hedged investment when the U.S. dollar is going up in value relative to the euro. Conversely, the Index is designed to have lower returns than an equivalent non-hedged investment when the U.S. dollar is falling in value relative to the euro. This Index is based on dividend paying companies in the WisdomTree DEFA Index that are domiciled in Europe and are traded in euros, have at least \$1 billion market capitalization, and derive at least 50% of their revenue in the latest fiscal year from countries outside of Europe. The component securities are weighted in the Index based on annual cash dividends paid with the following caps: maximum individual position capped at 5%, maximum sector weight capped at 25%, and maximum country weight capped at 25%.

Why is this Fund being restructured?

WisdomTree believes the new restructured Fund provides a thoughtful and relevant investment strategy for the current market environment—notably concern over the future of the euro. A declining euro potentially can help certain companies in Europe that are export oriented. These exporters potentially could perform well in an environment in which the euro declines compared to the U.S. dollar and exports to global consumers become more attractive. In a weakening euro but healthy European export scenario, a euro hedged equity strategy might provide greater returns than an un-hedged portfolio of European stocks. WisdomTree further anticipates operational efficiencies can be gained by limiting the currency hedge from multiple currencies to a single currency and hopes this translates to tighter trading spreads, which is the aim for those trading foreign exchange currencies as a greater spread indicates a higher transaction cost, and greater trading volumes as a result.

How does the change impact possible risks?

Upon implementation of the change, the Fund's performance will be heavily impacted by events affecting European securities and the value of the euro and will be subject to the other risk factors described in the Fund's prospectus.

If I currently own shares of HEDJ, do I need to do anything?

If you are comfortable with these changes, you do not need to do anything.

If you would prefer, you can sell out of your Fund position and reallocate to a different investment product. However, in the event of a transaction the normal trading costs and tax consequences will apply.

What are the tax implications?

These changes are not expected to generate any significant tax consequences for investors.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds before investing. To obtain a prospectus containing this and other important information, call 1-866-909-WISE (9473) or visit wisdomtree.com. Read the prospectus carefully before you invest.

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in currency involve additional special risks, such as credit risk and interest rate fluctuations. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. As this Fund can have a high concentration in some issuers, the Fund can be adversely impacted by changes affecting those issuers. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
