

Physical AI: investing in humanoids, drones and the automation of the real economy

Published 18 February 2026

Blake Heimann

Senior Associate, Quantitative Research

Key Takeaways

- AI is entering a new phase, shifting from digital applications to physical systems that directly influence production, logistics and mobility.
- Physical AI adoption is accelerating due to structural forces including labour shortages, defence investment and industrial reshoring.
- The WisdomTree Physical AI, Humanoids and Drones UCITS ETF offers diversified exposure to companies at the forefront of Physical AI development, where intelligence is being embedded directly into machines, infrastructure and other real-world applications.

Why the next phase of artificial intelligence (AI) adoption has arrived

In early January 2026, investors and industry leaders arrived in Las Vegas for CES expecting the familiar showcase of new technology. What stood out instead was the presence of humanoid robots throughout. Though largely prototypes, they marked a turning point: artificial intelligence was no longer confined to screens and software, but beginning to take physical form.

The shift was clearest in Boston Dynamics' Atlas, named 'Best Robot' at the Best of CES 2026 Awards and positioned within a long-term industrial roadmap. Hyundai has indicated plans to deploy Atlas in US manufacturing environments as early as 2028. Similar momentum is building elsewhere. China's UBTECH expects to deliver more than 5,000 humanoid robots in 2026 for industrial use, signalling the first move from demonstration to early commercial scale.

Artificial intelligence enters the physical world

These developments reflect a broader transition in artificial intelligence. The first major wave of AI adoption transformed digital environments, software and content, with intelligence largely concentrated in the cloud. A second phase is now underway, extending intelligence into the physical world. This shift has been enabled by advances in AI model efficiency, edge computing and sensing systems, allowing AI to operate

autonomously, respond in real time and execute physical actions. This marks a shift in how AI generates economic value, directly influencing production across the real economy.

What is Physical AI?

Physical AI refers to intelligent systems that can perceive their environment, make decisions and execute physical actions autonomously in real time. Unlike earlier forms of automation, these systems are designed to operate in dynamic, less structured environments.

Its scope spans multiple industries. Humanoid robots aim to introduce flexible automation into environments designed for humans. Drones and autonomous mobility systems are already deployed across defence, inspection, surveillance, logistics and transportation. Industrial robotics and smart manufacturing underpin modern automation, with applications extending into healthcare, agriculture, construction and other complex real-world settings.

Why Physical AI is accelerating now

The acceleration of Physical AI is being driven not only by technological progress, but by structural economic forces.

- **Demographic pressures** are creating persistent labour shortages across developed economies, particularly in manufacturing, logistics, healthcare and skilled trades, shifting automation from cost optimisation to operational necessity.
- **Industrial-scale automation** is reinforcing adoption. Robotics systems are embedded across factories and warehouses globally, generating operational data that improves performance and lowers unit costs.
- **Supply-chain reshoring** is driving renewed investment in domestic manufacturing, structurally improving the return profile of automation in higher-cost regions.
- **Defence adoption** is providing early volume, funding and validation for autonomous systems, with lessons increasingly transferring into commercial use.

An ecosystem approach to investing in Physical AI

As Physical AI scales across industries, the investment opportunity is best understood as an ecosystem rather than a single technology or use case.

The [WisdomTree Physical AI, Humanoids and Drones UCITS exchange-traded fund](#) (ETF) is designed to provide targeted exposure to this ecosystem through a structured, rules-based framework. The strategy focuses on five core Physical AI industry verticals: humanoid robotics, drones and autonomous mobility, smart manufacturing, logistics and supply-chain robotics, and emerging applications.

Each industry vertical is assigned a Thematic Score that reflects its importance within the Physical AI ecosystem, with a current emphasis on humanoid robotics, drones and autonomous mobility. Companies are further evaluated using a Relevancy Score, which measures the significance of their Physical AI activities based on technological capabilities, intellectual property, company disclosures and, where applicable, revenue exposure.

The approach is designed to prioritise companies with demonstrable exposure to Physical AI deployment, while limiting exposure to businesses where AI remains primarily experimental or only indirectly linked to revenues.

Constituents begin from an equal-weight baseline, with final weights adjusted using both scores to emphasise industry verticals and companies most closely tied to real-world Physical AI deployment, while maintaining diversification and liquidity discipline.

What this looks like in practice

The ETF is a modified equal-weighted portfolio of approximately 60 companies, with allocations tilted toward segments where Physical AI adoption is visible and long-term growth potential is strongest.

Figure 2: Top 20 constituents

In humanoid robotics, breadth is reflected through exposure to both end-system developers, such as UBTECH, Boston Dynamics (via Hyundai), XPeng, and Xiaomi, as well as component suppliers. Companies such as Schaeffler and Robotis provide actuators and motion systems that underpin humanoid joints and extremities.

In drones and autonomous systems, the portfolio captures scaled deployment driven by defence demand. AeroVironment illustrates this dynamic, with US and allied government contracts lifting total contract ceiling awards to a record US \$3.5 billion in fiscal 2026.

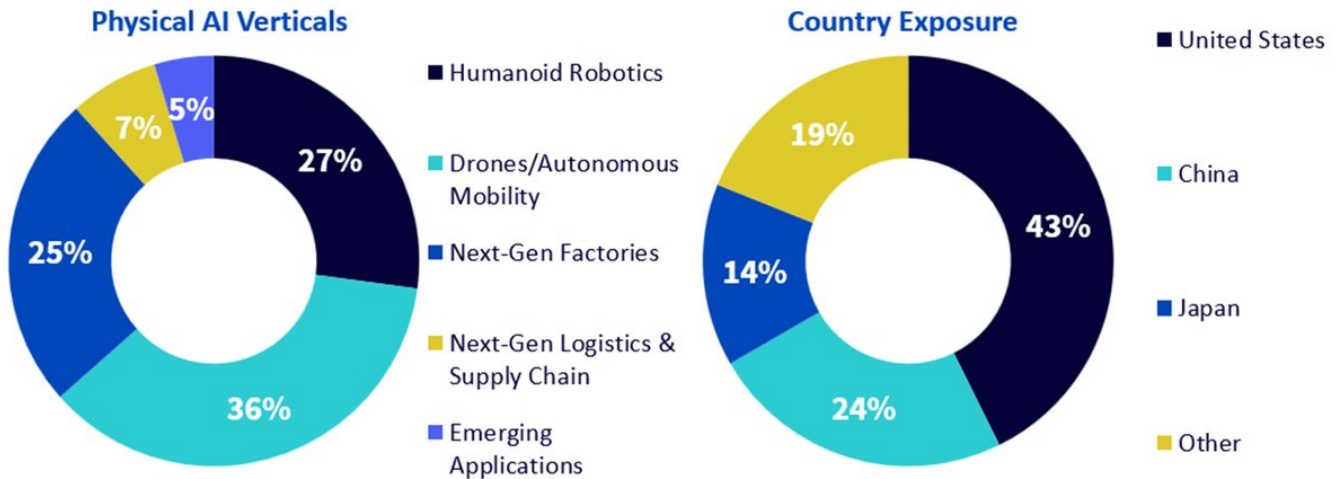

In industrial automation, FANUC (Fuji Automatic Numerical Control) highlights how Physical AI is being embedded into existing manufacturing platforms. By integrating on-robot intelligence alongside NVIDIA's Jetson edge-computing platform and Isaac Sim digital-twin technology, FANUC is accelerating the transition from simulation to factory deployment at scale.

At the enabling layer, NVIDIA and Siemens extend this exposure beyond individual machines. NVIDIA provides the intelligence layer across industrial robots and emerging humanoid systems through its Jetson platform and GR00T foundation model, while Siemens integrates AI-driven automation software, digital twins and simulation to coordinate intelligent machines within adaptive, self-optimising factory environments.

Around 60% of exposure is allocated to humanoid robotics, drones, and autonomous mobility; the areas where Physical AI is moving most rapidly from experimentation to scalable deployment. The remainder is focused on established industrial robotics and automation platforms integrating advanced AI capabilities, alongside selective exposure to earlier-stage applications.

Geographically, the portfolio reflects where Physical AI deployment is most advanced. Approximately one quarter of exposure is allocated to China, reflecting integrated supply chains, manufacturing scale, and early commercial deployment of humanoid and autonomous systems. This is complemented by exposure to the United States and Japan, where defence spending, industrial automation and enabling technologies continue to drive adoption.

Why this matters for investors

Physical AI represents the point at which artificial intelligence begins to reshape how goods are produced and moved. Structural forces, from labour shortages to defence investment and industrial reshoring, are turning deployment into a necessity rather than a choice. For investors, this creates an opportunity to access a productivity theme defined by real-world adoption rather than distant technological promises. The [WisdomTree Physical AI, Humanoids and Drones UCITS ETF](#) provides diversified exposure to the companies at the centre of this transition.

WisdomTree Issuer ICAV

The products discussed in this document are issued by WisdomTree Issuer ICAV ("WT Issuer"). WT Issuer is an umbrella investment company with variable capital having segregated liability between its funds organised under the laws of Ireland as an Irish Collective Asset-management Vehicle and authorised by the Central Bank of Ireland ("CBI"). WT Issuer is organised as an Undertaking for Collective Investment in Transferable Securities ("UCITS") under the laws of Ireland and shall issue a separate class of shares ("Shares") representing each fund.

The Fund is described in a Key Information Document (KID) or Key Investor Information Document (KIID) for UK investors, and the prospectus of WT Issuer ("WT Prospectus"). A copy of the WT Prospectus and the KID / KIID is available, for EEA/UK only, in English at www.wisdomtree.eu. Where required under national rules, the KID will also be available in the local language of the relevant EEA Member State. Investors should read the WT Prospectus before investing and should refer to the section of the WT Prospectus entitled »Risk Factors¼ for further details of risks associated with an investment in the Shares.

The [summary of investor rights](#) associated with an investment in the fund is available in English on WisdomTree Europe's website. WisdomTree Management Limited may decide to terminate the arrangements made for the marketing of its collective investment undertakings. In such circumstances, shareholders in the affected EEA Member State will be notified of this decision and will be provided with the opportunity to redeem their shareholding in the fund free of any charges or deductions for at least 30 working days from the date of such notification.

For Investors in Switzerland:

This document constitutes an advertisement of the financial product(s) mentioned herein.

The prospectus (in English only) and the key investor information documents (KID) (in German, French and Italian) are available from WisdomTree's website <https://www.wisdomtree.eu/en-ch/resource-library/prospectus-and-regulatory-reports>

For WisdomTree UCITS products only: the representative and paying agent of the ETPs in Switzerland is Société Générale Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich, Switzerland. The prospectus, the key investor information documents (KIID), the articles of association and the annual and semi-annual reports of the sub-funds are available free of charge from the representative and paying agent. As regards distribution in Switzerland, the place of jurisdiction and performance is at the registered seat of the representative and paying agent. Some of the sub-funds referred to in this document may not have been registered with the Swiss Financial Market Supervisory Authority ("FINMA"). In Switzerland, such sub-funds that have not been registered with FINMA may only be available to Qualified Investors.

For Investors in France:

The information in this document is intended exclusively for professional investors (as defined under the MiFID) investing for their own account and this material may not in any way be distributed to the public. The distribution of the Prospectus and the offering, sale and delivery of Shares in other jurisdictions may be restricted by law. WT Issuer is a UCITS governed by Irish legislation, and approved by the Financial Regulatory as UCITS compliant with European regulations although may not have to comply with the same rules as those applicable to a similar product approved in France. The Fund has been registered for marketing in France by the Financial Markets Authority (Autorité des Marchés Financiers) and may be distributed to investors in France. Copies of all documents (i.e. the Prospectus, the Key Investor Information Document, any supplements or addenda thereto, the latest annual reports and the memorandum of incorporation and articles of association) are available in France, free of charge at the French centralizing agent, Societe Generale at 29, Boulevard Haussmann, 75009, Paris, France. Any subscription for Shares of the Fund will be made on the basis of the terms of the prospectus and any supplements or addenda thereto.

For Investors in Malta: This document does not constitute or form part of any offer or invitation to the public to subscribe for or purchase shares in the Fund and shall not be construed as such and no person other than the person to whom this document has been addressed or delivered shall be eligible to subscribe for or purchase shares in the Fund. Shares in the Fund will not in any event be marketed to the public in Malta without the prior authorisation of the Maltese Financial Services Authority.
