## Key Takeaways

- Drone tech meets geopolitics: Unmanned aerial vehicles (UAVs) have moved to the forefront of Europe's defence agenda, with European nations seeking indigenous drone capabilities.
- Saab's autonomy advantage: Sweden's Saab AB – now in NATO's fold – is leveraging its tech heritage to pioneer autonomous drone systems. From software that controls 100-drone swarms to development of a "loyal wingman" unmanned combat aircraft.
- Leonardo's expanding arsenal: Italy's Leonardo S.p.A. is taking a broad approach – building new UAV platforms and partnering 50/50 with Turkey's Baykar to create a Europe-based drone powerhouse, LBA Systems.

## Drones and deterrence

Drones have proven their worth from Ukraine to the Middle East, where coordinated UAV swarms have emerged. Small, intelligent flying machines can spot targets, overwhelm defences, and link seamlessly with ground and air units – capabilities once confined to superpower arsenals. For Europe, which watched improvised drone tactics halt armour advances in Ukraine, investing in indigenous Unmanned Aerial Vehicles (UAV) technology is not optional; it's imperative and comparatively cheap. Against this backdrop, two companies – Saab (7.83%) and Leonardo (11.12%), both holdings in the [WisdomTree Europe Defence UCITS ETF \(WDEF\)](#)<sup>1</sup> – stand out as champions of Europe's drone evolution, each in their own style.

## Saab swarming ahead

Saab AB has long been synonymous with Swedish high-tech defence – from Gripen fighter jets to sophisticated radars. Now it's bringing that pedigree to unmanned systems. Rather than churn out large numbers of small drones, Saab's approach is to make drones smarter, more autonomous, and better integrated. A recent milestone underscores this: in early 2025, the Swedish Armed Forces unveiled a

Saab-developed drone swarm program enabling one operator to control up to 100 UAVs simultaneously. In trials scheduled during Arctic exercises, these swarms are expected to autonomously adapt to missions ranging from reconnaissance to payload delivery in complex environments.

## **Leonardo: Forging the future with partnerships and firepower**

In the sunny Italian skies, Leonardo S.p.A. is taking a more expansive route to drone dominance, leveraging its broad product portfolio and pan-European ties. As one of Europe's largest aerospace and defence firms, Leonardo has its hands in everything from helicopters to cyber security. When it comes to UAVs, that means both developing drones in-house and teaming up with partners to fill capability gaps quickly. This twin-track strategy is evident in two major moves: Leonardo's new Falco Astore armed drone launch, and a landmark joint venture with Turkey's famed drone maker Baykar.

First, the home-grown effort. The Astore (Italian for "goshawk") is Leonardo's latest medium-altitude long-endurance (MALE) UAV – essentially a beefed-up, weaponised iteration of its earlier Falco EVO. With a 650 kg maximum take-off weight, 16-hour endurance, and newly added underwing pylons, the Astore can carry around 70 kg of cargo. The Astore gives Italy a measure of self-reliance in unmanned strike capability. It shows how European states are looking to their domestic industry to increase readiness now, rather than waiting years for pan-European projects. It's a gentle reminder that Europe's quest for strategic autonomy extends to having home-grown "eyes in the sky". Leonardo's Falco line, which started as unarmed surveillance drones, has now evolved into a combat UAS – a narrative of adaptation that mirrors Europe's shift from peacekeeping posture to defence.

## A new era of European defence: Narrative and numbers alike

It is often said that necessity breeds innovation. Europe's present necessity – to bolster its defence amid war on its doorstep – is breeding a new wave of drone innovation, with Saab and Leonardo at the vanguard. These two firms offer a fascinating contrast in a complementary approach. Saab, hailing from a non-aligned-now-NATO nation of modest size, plays to its strengths by making systems smarter rather than larger. Its narrative is one of qualitative edge: a swarm that can re-route itself, a drone that can think like a pilot's teammate, a network of sensors that can confound a much bigger foe. Leonardo, by contrast, comes from one of Europe's big defence spenders and embraces a scale and scope strategy: covering every market segment through a mix of indigenous development and strategic partnerships, ensuring that Europe has ready access to the full spectrum of unmanned tech.

From a geopolitical perspective, these advancements feed into Europe's broader strategic autonomy. Drones are eyes and ears, but they are also increasingly shields and spears. A Europe equipped with its own high-end drones can better monitor its borders, deter aggression, and operate independently when needed. Both Saab and Leonardo are core holdings in the [WisdomTree Europe Defence ETF](#), as the convergence of macro (defence budgets, policies) and micro (corporate innovation and earnings) is a compelling investment narrative.

A few years ago, European defence firms were often seen as stodgy value plays reliant on slow procurement cycles. That is no longer the narrative. Now, it is one of urgency, growth, and technological

leapfrogging. Drones are a critical part of the story of European defence. In a world of growing complexity, Europe's defence industry is not just responding to change, helping drive it, one drone at a time.

### **Closing the gap**

Investors have become nervous amidst the recent strong run of European defence stocks but it's worth noting they still trail their US counterparts, a trend that has persisted since 1999. Historical performance shows plenty of room for European defence stocks to catch up to their US counterparts.

### **Figure 3: Historical performance US versus Europe aerospace & defence indices**

While European defence firms have seen record-high order books, multi-year government spending commitments, and growing market share, their valuation multiples remain lower than those in the US. Compared to US aerospace and defence stocks, which trade at higher historical price to earnings (P/E) ratios (at 58.2x), European aerospace and defence stocks (at 46.6x) still trade at lower price-to-earnings multiples and offer comparatively higher-quality metrics such as Return on Equity and Return on Assets, as illustrated below.

### **Figure 4: Comparison of fundamentals**

*Source: Bloomberg, WisdomTree as of 10 July 2025. Historical performance is not an indication of future performance and any investments may go down in value*
