Glossary

Basis point: 1/100th of 1 percent.

Carry: The amount of return that accrues from investing in fixed income or currency forward contracts.

Drawdown: Measurement of percentage drop from the most recent high.

Duration: A measure of a bond's sensitivity to changes in interest rates. The weighted average accounts for the various durations of the bonds purchased as well as the proportion of the total government bond portfolio that they make up. Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates.

Earnings per share (EPS): Total earnings divided by the number of shares outstanding. Measured as a percentage change as of the annual Index screening date compared to the prior 12 months. Higher values indicate greater growth orientation.

Earnings revisions ratio: The ratio of earning upgrades to downgrades. All things being equal, the higher the ratio, the higher the earnings surprise to the upside.

Forward P/E ratio: Share price divided by compilation of analyst estimates for earnings-per-share over the coming 12-month period. These are estimates that may be subject to revision or prove to be incorrect over time.

Fundamentals: Attributes related to a company's actual operations and production as opposed to changes in share price.

Growth: Style of investing characterized by higher price levels relative to fundamentals, such as dividends or earnings. Price levels are higher because investors are willing to pay more due to their expectations of future improvements in these fundamentals.

Maturity: Refers to a finite time period at the end of which the financial instrument will cease to exist and the principal is repaid with interest.

Price-to-earnings (P/E) ratio: Share price divided by earnings per share. Lower numbers indicate an ability to access greater amounts of earnings per dollar invested.

Spread: Typically refers to a difference between a measure of yield for one asset class and a measure of yield for either a different subset of that asset class or a different asset class entirely.

Tenor: Refers to the length of time remaining before a financial contract expires. It is sometimes used interchangeably with the term maturity, although the terms have distinct meanings. Tenor is used in relation to bank loans, insurance contracts, and derivative products.

Treasury Bill: A treasury bill (T-Bill) is a short-term debt obligation backed by the U.S. government with a maturity of one month (four weeks), three months (13 weeks) or six months (26 weeks).

Treasury Bond: A government debt security issued by the U.S. Federal government that have maturities greater than 20 years.

Treasury Inflation-Protected Securities (TIPS): Bonds issued by the U.S. government. TIPS provide protection against inflation. The principal of a TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When a TIPS matures, you are paid the adjusted principal or original principal, whichever is greater.

Treasury note: A debt obligation issued by the United States government that matures in less than 30 years.

Treasury: Debt obligation issued by the U.S. government with payments of principal and interest backed by the full faith and credit of the U.S. government.

Value: Style of investing characterized by lower price levels relative to fundamentals, such as earnings or dividends. Prices are lower because investors are less certain of the performance of these fundamentals in the future. This term is also related to the Value Factor, which associates these stock characteristics with excess returns vs the market over time.

Yield curve: Graphical depiction of interest rates on government bonds, with the current yield on the vertical axis and the years to maturity on the horizontal axis.

Yield To Maturity (YTM): The rate of return generated on these securities, assuming interest payments and capital gains or losses as if the instrument is held to maturity. The weighted average yield is calculated based on the market value of each security. The calculation does not incorporate yield from any derivative instruments that are part of the Fund's investments.

Yield to worst: The rate of return generated assuming a bond is redeemed by the issuer on the least desirable date for the investor.

Yield: The income return on an investment. Refers to the interest or dividends received from a security that is typically expressed annually as a percentage of the market or face value.

Index Definitions

Bloomberg U.S. Aggregate Index: Represents the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, as well as mortgage and asset backed securities.

Bloomberg U.S. Aggregate Enhanced Yield Index: An index designed to achieve a higher yield than the flagship US Aggregate Index while broadly retaining similar risk characteristics.

Bloomberg U.S. Aggregate Short Index: A broad-based benchmark that measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury with one to five years to maturity.

Bloomberg U.S. Short Aggregate Enhanced Yield Index: An index designed to achieve a higher yield than the 1-5-year segment of the Bloomberg U.S. Aggregate Index ("Short Agg") while broadly retaining similar risk characteristics.

Bloomberg U.S. Treasury 1-3 Year Index: A broad-based benchmark that represents the performance of the U.S. Treasury 1-3 Year component of the Barclays U.S. Aggregate Index.

Bloomberg U.S. Treasury 5-10 Year Index: A broad-based benchmark that represents the performance of the U.S. Treasury 5-10 Year component of the Barclays U.S. Aggregate Index.

Bloomberg U.S. Treasury Bellwethers 10 Year Index: A broad-based benchmark that represents the performance of the U.S. Treasury Bellwethers 10 Year component of the Barclays U.S. Aggregate Index.

Bloomberg U.S. Treasury Floating Rate Bond Index: A broad-based benchmark that covers the universe of U.S. Treasury Floating Rate

Bloomberg U.S. Treasury Long Index: A broad-based benchmark that measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury with 10 years or more to maturity.

Bloomberg Rate Hedged U.S. Aggregate Bond, Zero Duration Index: Measures the return of the US Aggregate Index with its interest rate (duration) exposure fully hedged with a short position in four on-the-run (OTR) US Treasury bellwether securities.

ICE BofA 3-Month Treasury Bill: Measures the return of the US Treasury 3-Month Treasury Bill.

ICE BofA Diversified Core U.S. Preferred Securities: Measures the performance of exchange-listed U.S. dollar denominated preferred stock and convertible preferred stock publicly issued by corporations in the U.S. domestic market

ICE BofA Inflation-Linked Treasury: Measures the return of US dollar denominated inflation-linked sovereign debt publicly issued by the US government in its domestic market.

ICE BofA Municipal Securities: Measures the performance of US dollar denominated investment grade tax-exempt debt publicly issued by US state and territories.

MSCI ACWI Index: A free-float adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed and emerging markets.

MSCI ACWI Index: A free-float adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed and emerging markets excluding companies based in the United States.

MSCI ACWI Small Cap Index: A free-float adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed and emerging markets, specifically focusing on the small-cap segment of these equity markets.

MSCI Country Indexes: A market capitalization-weighted index designed to measure the performance of its respective equity market.

MSCI EAFE Index: A market cap-weighted index composed of companies representative of the developed market structure of developed countries in Europe, Australasia and Japan.

MSCI EAFE Large Cap Growth Index: A free float-adjusted market capitalization-weighted equity index that captures large -cap representation across developed markets around the world, excluding the U.S. and Canada, focusing on those with higher earnings growth characteristics.

MSCI EAFE Large Cap Index: A free float-adjusted market capitalization equity index that captures large -cap representation across developed market countries around the world, excluding the U.S. and Canada.

MSCI EAFE Large Cap Value Index: A free float-adjusted market capitalization-weighted equity index that captures large -cap representation across developed markets around the world, excluding the U.S. and Canada, focusing on those with higher book value-to-market value ratios.

MSCI EAFE Mid Cap Growth Index: A free float-adjusted market capitalization-weighted equity index that captures mid-cap representation across developed markets around the world, excluding the U.S. and Canada, focusing on those with higher earnings growth characteristics.
