Blockchain is quietly rewiring the financial system

Published 28 May 2025

Associate Director, Quantitative Research

Key Takeaways

- Rising government deficits and inflation concerns are reinforcing the long-term case for bitcoin as a non-sovereign store of value.
- Bitcoin miners offer levered upside with improving fundamentals, driven by high BTC prices, easing energy costs, and AI infrastructure repurposing.
- Stablecoins and real-world-asset tokenisation are gaining adoption, signalling blockchain's growing role in global finance.
- Regulatory progress and capital market access are creating a more favourable environment for crypto-native companies.
- Blockchain equities combine macro-hedge potential with growth exposure to disruptive technologies reshaping the financial system.

Backdrop: debt, inflation and rising yields

The recent 90-day tariff pause with China gave risk assets a lift, and April CPI's[1] 2.3% year-on-year (YoY) print signalled progress on inflation[2]. As a result, the outlook for near-term rate cuts from the Federal Reserve (Fed) pared back. Walmart's earnings call contained warnings of pass-throughs of tariff costs to consumers, reminding markets that cost pressures may still be on the horizon.

Optimism around President Trump's trip to the Middle East, securing $600 billion[3] in defence and artificial intelligence (AI) commitments was met with Moody's cut of the US credit rating from AAA to Aa1, citing continued problems with the budget deficit[4]. The most recent tax bill proposal puts the deficit on track to widen from 7% to 8% of GDP[5,6]. Ten-year Treasuries hovering near 5% now embed both rising credit and inflation risk, and foreign holders are quietly trimming exposure as currency volatility erodes real returns. In past debt-spiral regimes policymakers have chosen stealth default by letting inflation run; unsurprisingly, in an environment like this, capital is tilting toward scarce, non-sovereign stores of value.

Both gold and bitcoin sit near all-time highs, but bitcoin's price action is more telling. It has broken correlation with US equities and is tracking gold's scarcity bid[7], but with the clarity of a fully capped supply, 24/7 liquidity, and censorship-resistant settlement. There is no central bank managing this currency, only

code, and it appears as though more and more investors are beginning to trust this asset to serve as a long-term store of value.

Miners as high-beta bitcoin proxies

Public bitcoin miners convert cheap electricity into bitcoin inventory, and both sides of that equation are looking stronger than at any point since the 2024 halving[8]. With bitcoin trading above $100k on the back of growing government deficits, and energy costs easing amid rising OPEC output[9] and US pro-energy policy, miners have a rare opportunity to expand margins. As of Q4 2024, the cost of production for publicly traded mining firms ranged from $25k to $80k per bitcoin[10] (depending on energy mix, hardware efficiency, and scale), well below prevailing market prices. Also, many are repurposing any idle infrastructure for AI inferencing, unlocking an additional revenue stream powered by the same low-cost energy and compute[11].

Market performance reflects these tailwinds: several miners are up over 50% in the last 30 days, outpacing bitcoin's 20% return as markets recover from 'Liberation Day' tariff announcements. With bitcoin held on debt-financed balance sheets, these firms offer levered upside to further spot rallies, while diversified data centre strategies help cushion downside risks. In a potentially reflationary world facing monetary debasement, these firms resemble the high-beta gold miners of past commodity cycles—except their output is algorithmically scarce bitcoin.

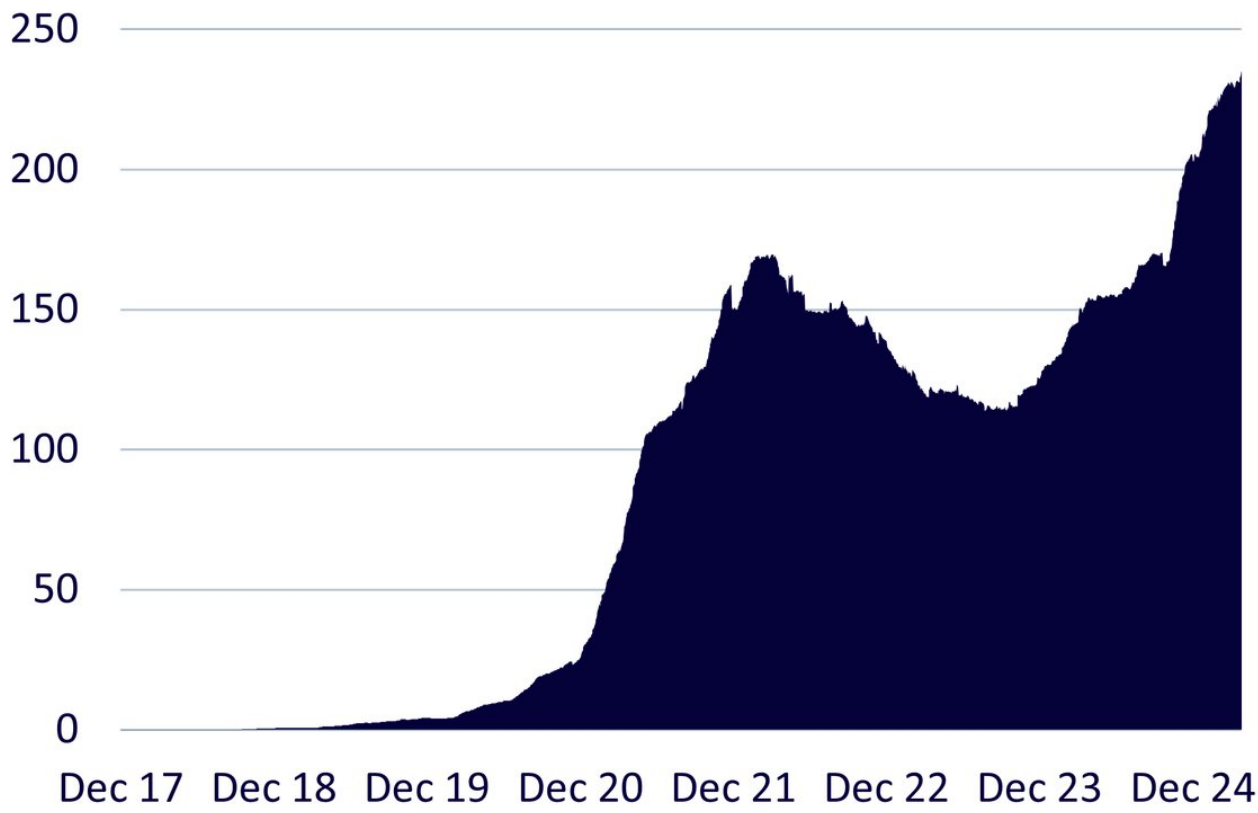
Stablecoins, tokenisation, and the new rails of finance

Stablecoins and tokenised assets are fast becoming the user-facing layer of the crypto economy. US dollar-pegged coins are quickly approaching $250 billion market cap and, in 2024, they moved $27.6 trillion in volume—more than Visa and Mastercard combined[12].

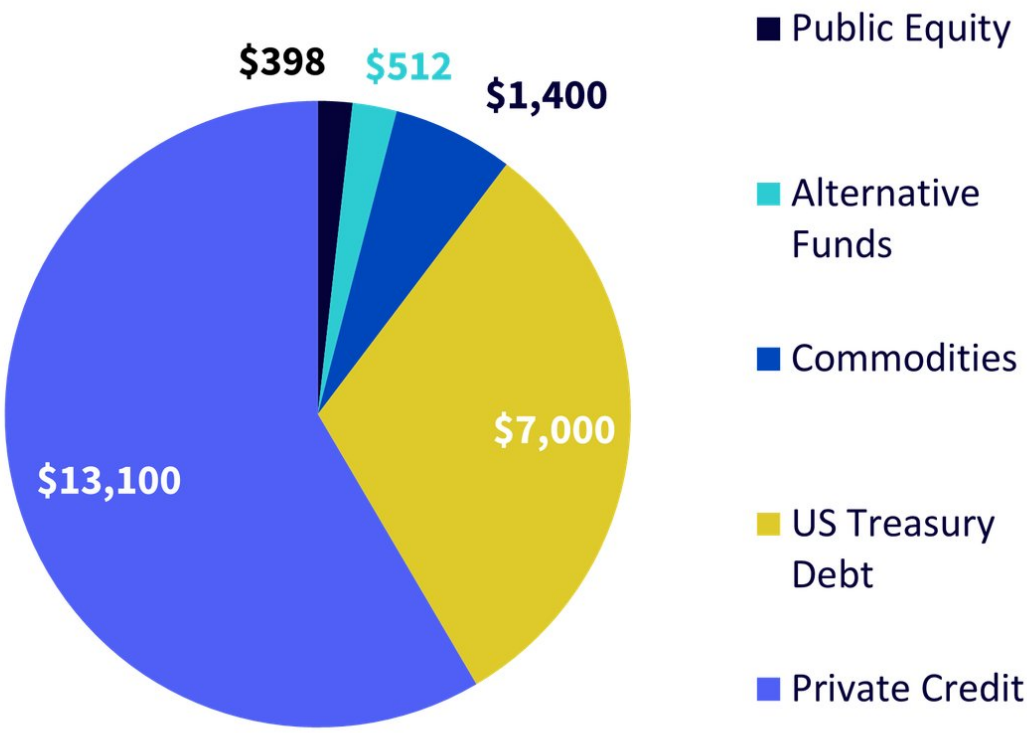
Tether's USDT dominates the field with $150 billion market cap, followed by Circle's USDC with $60 billion, which is up over 80% in the last year[13]. Circle is eyeing an IPO with up to a $5 billion valuation[14]. PayPal's own stablecoin hovers near $900 million in market cap, split across the Ethereum, Solana and Berachain blockchains[15]; and Stripe just bought Bridge to embed stable-coin settlement directly into its stack[16].
The incumbents are closely watching. Visa has unveiled its VTAP tokenisation platform, while Mastercard reports that roughly 30% of its 2024 transactions were tokenised[17].

Figure 2: Growth of stablecoins; stablecoin market cap USD billion



Real-world-asset (RWA) tokenisation is showing similar momentum. According to Rwa.xyz, the on-chain supply of tokenised treasuries, credit, and other assets has leapt from about $5 billion at the start of 2023 to more than $20 billion today[18]. Broadridge's distributed-ledger repo platform alone already clears $1 trillion per month in tokenised collateral[19]. By shifting settlement and record-keeping to smart contracts (code running on the blockchain), firms can automate middle- and back-office work that requires layers of manual reconciliation. The result is lower costs, faster settlement, and broader accessibility, with the added benefits of 24/7 liquidity.

Figure 3: Tokenised real-world assets on chain (excluding stablecoins), millions USD



The opportunity is large enough that even big tech wants in. It has been reported that Meta is re-engaging its efforts for stablecoin integration, with aims to let its billions of users send low-cost, cross-border payments in-app[20]. If that happens, the rails of finance may soon look very different from the ones we've known.

Policy tailwinds

SEC Commissioner Hester Peirce has revived her 'Safe Harbor 2.0' blueprint, which would give new token networks a three-year grace period from many securities-law obligations as long as they publish semi-annual updates and an 'exit report' at network maturity[21]. The goal is to let projects prove themselves before regulators decide whether their tokens behave like equity, commodities, or something entirely new. That breathing-room could finally allow developers and investors to explore the equity-like side of crypto assets, including real-world cash-flow rights. A case in point is decentralised exchange Uniswap: trading fees already flow into the protocol's on-chain treasury and could one day be paid to UNI token holders, much like dividends.

Capital-market acceptance

Wall Street is catching up fast. Recently dropped SEC lawsuits have opened the door to broader market activity. Coinbase, now in the S&P 500, is acquiring crypto derivatives exchange Deribit for $2.9 billion[22], offering a sign that crypto-native mergers and acquisitions are accelerating. Robinhood is expanding into Canada with a $179 million acquisition of WonderFi, whose portfolio spans payments, crypto staking,

wallets, and its own Ethereum L2. Public markets are also continuing to open up to crypto firms. Galaxy Digital has completed its long-awaited Nasdaq 'uplisting' from the Toronto Stock Exchange. eToro's recent IPO[23] success saw prices rise 34% on its market debut, achieving a $5.6 billion valuation[24]. And still, markets await high profile IPOs such as Kraken and Circle. Institutional wrappers for direct crypto access tell the same story: spot bitcoin and multi-asset crypto exchange-traded funds (ETFs) and exchange-traded products (ETPs) now hold more than $100 billion in assets[25].

Conclusion

The financial system is quietly being rewired. Growing deficits, sticky inflation, and 5% Treasury yields have investors hunting for assets that can't be printed away. Adoption of bitcoin as an alternative store of value is growing. With bitcoin-heavy balance sheets and margins expanding, miners stand to benefit. At the same time, stablecoins are beginning to rival traditional payment rails, and real-world assets are migrating to blockchains that settle 24/7. The signs are hard to ignore. Regulation is finally bending toward clarity, and the doors to the traditional capital markets are opening. The convergence between traditional financial system and the crypto financial system is underway.

WisdomTree Issuer ICAV

The products discussed in this document are issued by WisdomTree Issuer ICAV (“WT Issuer”). WT Issuer is an umbrella investment company with variable capital having segregated liability between its funds organised under the laws of Ireland as an Irish Collective Asset-management Vehicle and authorised by the Central Bank of Ireland (“CBI”). WT Issuer is organised as an Undertaking for Collective Investment in Transferable Securities (“UCITS”) under the laws of Ireland and shall issue a separate class of shares ("Shares”) representing each fund.

The Fund is described in a Key Information Document (KID) or Key Investor Information Document (KIID) for UK investors, and the prospectus of WT Issuer (“WT Prospectus”). A copy of the WT Prospectus and the KID / KIID is available, for EEA/UK only, in English at www.wisdomtree.eu. Where required under national rules, the KID will also be available in the local language of the relevant EEA Member State. Investors should read the WT Prospectus before investing and should refer to the section of the WT Prospectus entitled 'Risk Factors' for further details of risks associated with an investment in the Shares.

The summary of investor rights associated with an investment in the fund is available in English on WisdomTree Europe's website. WisdomTree Management Limited may decide to terminate the arrangements made for the marketing of its collective investment undertakings. In such circumstances, shareholders in the affected EEA Member State will be notified of this decision and will be provided with the opportunity to

redeem their shareholding in the fund free of any charges or deductions for at least 30 working days from the date of such notification.

Notice to Investors in Switzerland – Qualified Investors

This document constitutes an advertisement of the financial product(s) mentioned herein.

The prospectus and the key investor information documents (KIID) are available from WisdomTree's website: https://www.wisdomtree.eu/en-ch/resource-library/prospectus-and-regulatory-reports

Some of the sub-funds referred to in this document may not have been registered with the Swiss Financial Market Supervisory Authority ("FINMA"). In Switzerland, such sub-funds that have not been registered with FINMA shall be distributed exclusively to qualified investors, as defined in the Swiss Federal Act on Collective Investment Schemes or its implementing ordinance (each, as amended from time to time). The representative and paying agent of the sub-funds in Switzerland is Société Générale Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich, Switzerland. The prospectus, the key investor information documents (KIID), the articles of association and the annual and semi-annual reports of the sub-funds are available free of charge from the representative and paying agent. As regards distribution in Switzerland, the place of jurisdiction and performance is at the registered seat of the representative and paying agent.

For Investors in France:

The information in this document is intended exclusively for professional investors (as defined under the MiFID) investing for their own account and this material may not in any way be distributed to the public. The distribution of the Prospectus and the offering, sale and delivery of Shares in other jurisdictions may be restricted by law. WT Issuer is a UCITS governed by Irish legislation, and approved by the Financial Regulatory as UCITS compliant with European regulations although may not have to comply with the same rules as those applicable to a similar product approved in France. The Fund has been registered for marketing in France by the Financial Markets Authority (Autorité des Marchés Financiers) and may be distributed to investors in France. Copies of all documents (i.e. the Prospectus, the Key Investor Information Document, any supplements or addenda thereto, the latest annual reports and the memorandum of incorporation and articles of association) are available in France, free of charge at the French centralizing agent, Societe Generale at 29, Boulevard Haussmann, 75009, Paris, France. Any subscription for Shares of the Fund will be made on the basis of the terms of the prospectus and any supplements or addenda thereto.

For Investors in Malta: This document does not constitute or form part of any offer or invitation to the public to subscribe for or purchase shares in the Fund and shall not be construed as such and no person other than the person to whom this document has been addressed or delivered shall be eligible to subscribe for or purchase shares in the Fund. Shares in the

Fund will not in any event be marketed to the public in Malta without the prior authorisation of the Maltese Financial Services Authority.

For Investors in Monaco: This communication is only intended for duly registered banks and/or licensed portfolio management companies in Monaco. This communication must not be sent to the public in Monaco
