

Eight essential elements of cybersecurity

Published 15 April 2024

Mobeen Tahir

Director, Research

Key Takeaways

- Cybersecurity risks are on the rise as organisations adopt digital tools.
- From securing data to devices and training people, cybersecurity has many facets.
- Companies with a broad focus across multiple areas of cybersecurity potentially stand a better chance of enduring in a rapidly evolving industry.

On 19 February, the Financial Times reported¹ that North Korean cyber criminals were turning to artificial intelligence (AI) to steal funds and cutting-edge technologies from victims around the world. The report stated how hackers targeted global defence, cyber security, and crypto companies by tricking people on popular platforms like LinkedIn. It also stated that ChatGPT developer OpenAI and its investor Microsoft had also confirmed that bad actors were using their AI services for malicious cyber activities.

Generative AI tools have lowered the bar for people to do more technically sophisticated things with relatively basic skills. Large language models allow users to communicate with the computer in a language like English and let the model translate their commands to write programmes. Unfortunately, technology can also empower bad actors to do unlawful things more easily. This is why cybersecurity must become smarter and seal all potential vulnerabilities before criminals exploit them.

WisdomTree has partnered with venture group Team8 to identify eight distinct cybersecurity areas that are essential in a world with ever-increasing risks.

For cybersecurity to be thorough it needs to be holistic

Source: WisdomTree, Team8, 2024.

Data Security

It is estimated that the world produces 328 million terabytes of data every single day. One terabyte is 1000 gigabytes. In other words, the world is producing a lot of data. Moreover, the world is producing data faster than ever. It is also estimated that 90% of the world's data was generated in the last two years alone².

IBM states that the average data breach cost in 2023 was USD4.45 million, a 15% increase over three years³. With the world producing more data than ever, protecting that data is paramount. This is what data security aims to achieve.

Cloud Security

All this data being produced means more storage in the cloud. According to one report⁴, approximately 60% of all corporate data is stored in the cloud, up from just 30% in 2015. Moreover, 89% of companies use a multi-cloud approach, a term referring to a company using at least two cloud-based applications.

And unfortunately, malicious actors are fully aware of this. In 2023, there was a 110% increase in cloud-conscious cases⁵. This means that cyber adversaries are increasingly looking to attack their targets via cloud-based applications. Securing the cloud is, therefore, a critical theme in cybersecurity.

Shift-Left

Securing the cloud or any other application cannot be an afterthought. Shifting left refers to the idea of integrating cybersecurity at the point when the software is being developed. The opposite of this would be to keep cybersecurity right and rely on generic solutions from third-party providers.

Shifting cybersecurity left allows developers to critically evaluate vulnerabilities within the software to ensure all necessary guardrails are in place when the software is being created. This can reduce costs and expedite delivery as there will likely be fewer problems once the software has been introduced to users.

Smarter security

Generative AI has lowered the bar for becoming a bad actor. It is now easier to create malicious code, like that used in a polymorphic attack in which the cyber-attack changes code, content, and structure to avoid being detected by security systems. Such a code comes back stronger if it gets locked out by a company's security.

Tackling such threats requires automation. Smarter security includes automation tools that can monitor networks for potential threats. This is where AI tools that learn, adapt, and evolve play a crucial role in providing security.

Security of things

The Internet of Things (IoT) refers to devices that are connected to the internet. Laptops and mobile phones are obvious examples but now, increasingly, cars, watches, digital assistants, TVs, dishwashers, and so forth, all belong to the IoT world. It is estimated that there are currently 17 billion IoT devices in the world, and this number could double by 20306.

Clearly, our devices need to be protected as they all provide attackers with points of entry for gaining access to our networks and data. The security of things, therefore, is the idea of protecting this growing number of connected devices from potential threats.

Perimeterless world

The so-called attack surface has grown, with organisations having a more significant number of remote workers since the COVID-19 pandemic. This attack surface refers to the sum of vulnerabilities that hackers can exploit to access an organisation's network or sensitive data. Compared to the past, where workers may have been confined within a perimeter, attackers now have more potential entry points.

In a perimeterless world, organisations need more sophisticated tools for protecting themselves. This includes two-factor authentication and biometrics for users to log in to their company network and applications.

Resilience & recovery

In May 2017, the WannaCry ransomware attack cost the UK's National Health Service £92m through services lost and IT costs. Even more importantly, 19,000 appointments were cancelled as more than 80 hospital trusts and 8% of GP practices were disrupted⁷.

According to Team8, cybersecurity cannot afford to stop at 'identify, protect, detect, and respond' but must also include the capability for rapid recovery from degradation, disruption, or denial of access to an organisation's network or data. The cost of not being able to do so can be catastrophic.

Layer 8

An organisation may have the most powerful cybersecurity tools to protect itself. But, if the humans aren't trained and equipped to handle risks, the guardrails may disintegrate like a house of cards. Layer 8, therefore, is the human factor.

According to CrowdStrike, 75% of attacks in 2023 were malware-free, up from 40% in 2019. This means that attackers are relying less on malware attacks delivered via phishing emails and using more sophisticated methods like social engineering, which are intended to deceive humans. Thus, empowering people to better manage cybersecurity risks can be the bedrock of all other measures.

Conclusion

Cybersecurity is not optional. Its importance becomes all too apparent when a successful attack takes place. But by then it may be too late to prevent significant damage. A cybersecurity framework that takes a holistic approach to these eight essential elements can give organisations the best chance of avoiding undesirable outcomes.

WisdomTree strongly recommends that you do not place undue reliance on these forward-looking statements.

WisdomTree Issuer ICAV

The products discussed in this document are issued by WisdomTree Issuer ICAV ("WT Issuer"). WT Issuer is an umbrella investment company with variable capital having segregated liability between its funds organised under the laws of Ireland as an Irish Collective Asset-management Vehicle and authorised by the Central Bank of Ireland ("CBI"). WT Issuer is organised as

an Undertaking for Collective Investment in Transferable Securities ("UCITS") under the laws of Ireland and shall issue a separate class of shares ("Shares") representing each fund. Investors should read the prospectus of WT Issuer ("WT Prospectus") before investing and should refer to the section of the WT Prospectus entitled »Risk Factors¼ for further details of risks associated with an investment in the Shares.

Notice to Investors in Switzerland – Qualified Investors

This document constitutes an advertisement of the financial product(s) mentioned herein.

The prospectus and the key investor information documents (KIID) are available from WisdomTree's website: <https://www.wisdomtree.eu/en-ch/resource-library/prospectus-and-regulatory-reports>

Some of the sub-funds referred to in this document may not have been registered with the Swiss Financial Market Supervisory Authority ("FINMA"). In Switzerland, such sub-funds that have not been registered with FINMA shall be distributed exclusively to qualified investors, as defined in the Swiss Federal Act on Collective Investment Schemes or its implementing ordinance (each, as amended from time to time). The representative and paying agent of the sub-funds in Switzerland is Société Générale Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich, Switzerland. The prospectus, the key investor information documents (KIID), the articles of association and the annual and semi-annual reports of the sub-funds are available free of charge from the representative and paying agent. As regards distribution in Switzerland, the place of jurisdiction and performance is at the registered seat of the representative and paying agent.

For Investors in France

The information in this document is intended exclusively for professional investors (as defined under the MiFID) investing for their own account and this material may not in any way be distributed to the public. The distribution of the Prospectus and the offering, sale and delivery of Shares in other jurisdictions may be restricted by law. WT Issuer is a UCITS governed by Irish legislation, and approved by the Financial Regulatory as UCITS compliant with European regulations although may not have to comply with the same rules as those applicable to a similar product approved in France. The Fund has been registered for marketing in France by the Financial Markets Authority (Autorité des Marchés Financiers) and may be distributed to investors in France. Copies of all documents (i.e. the Prospectus, the Key Investor Information Document, any supplements or addenda thereto, the latest annual reports and the memorandum of incorporation and articles of association) are available in France, free of charge at the French centralizing agent, Societe Generale at 29, Boulevard Haussmann, 75009, Paris, France. Any subscription for Shares of the Fund will be made on the basis of the terms of the prospectus and any supplements or addenda thereto.

For Investors in Malta

This document does not constitute or form part of any offer or invitation to the public to subscribe for or purchase shares in the Fund and shall not be construed as such and no person other than the person to whom this document has been addressed or delivered shall be eligible to subscribe for or purchase shares in the Fund. Shares in the Fund will not in any event be marketed to the public in Malta without the prior authorisation of the Maltese Financial Services Authority.

For Investors in Monaco

This communication is only intended for duly registered banks and/or licensed portfolio management companies in Monaco. This communication must not be sent to the public in Monaco.
