The Total Return NAV is calculated based on net asset value on ex-dividend date. The ex-dividend date is the day on which all shares bought and sold no longer come attached with the right to be paid the most recently declared dividend. It is also on this date that an amount roughly equal to the dividend paid is removed from the Fund's net asset value once declared. Total Return Market Price is calculated based on the midpoint of the bid/ask spread on payable date. The payable date is the date the dividend is paid to the holders of record. For the current performance reporting period, the ex-dividend date occurred prior to the reporting period and the payable date occurred during the reporting period.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

The BoA Merrill Lynch 0-5 Year US High Yield Constrained, Zero Duration Index tracks the performance of the combination of a long position in short maturity US high yield bonds and a short position in on the run US Treasuries where the net interest rate exposure of the index is adjusted to a zero year duration. Market values of long and short positions are rebalanced at month-end. The BoA Merrill Lynch 0-5 Year US High Yield Constrained, Negative Seven Duration Index tracks the performance of the combination of a long position in short maturity US high yield bonds and a short position in on the run US Treasuries where the net interest rate exposure of the index is adjusted to a negative seven year duration. Market values of long and short positions are rebalanced at month-end. The Barclays US Aggregate Bond Index represents the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, as well as mortgage and asset backed securities.

The WisdomTree Japan Interest Rate Strategy Index is designed to provide exposure to the relative performance of Treasury Bills in relation to Japanese Government Bonds maturing in 5 to 10 years, as well as the change in the value of the Yen relative to the Dollar. The Index will consist of three components: 1) The Long portfolio will consist of Treasury Bills maturing in three months or less. Allocations within the long portfolio will be weighted by market capitalization and rebalanced on a monthly basis. 2) The Short portfolio will be comprised of short positions in eligible Japanese Government Bonds maturing in five to ten (5-10) years. The positions will be market capitalization weighted and rebalanced monthly to incorporate newly issued securities. 3) A currency adjustment (long Dollar, short Yen) which is reset monthly and reassessed annually with reference to its contribution to the volatility of the overall index. Japanese Government includes fixed income securities issued by the Japanese government, agencies, and local authorities. Bonds guaranteed by the Japanese Government, but issued by other entities are excluded from the index as well as inflation linked bonds issued by Japan. Qualifying securities must have a fixed coupon schedule and a minimum amount outstanding of JPY 20 billion.

The Bloomberg US Treasury Floating Rate Bond Index is a rules-based, market-value weighted index engineered to measure the performance and characteristics of floating rate coupon U.S. Treasuries which have a maturity greater than 12 months. To be included in the index a security must have a minimum par amount of $1,000MM.
