

WisdomTree ETFs

DIVIDEND YIELD REPORT [as of September 30, 2012]

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

DIVIDEND YIELD REPORT_[as of September 30, 2012]

The **Fund Distribution Yield** is the annual yield a Fund investor would receive in distributions if the most recent Fund distribution stayed consistent going forward. It is calculated by annualizing the most recent Fund distribution and dividing by the current Fund NAV. The yield represents a single distribution from the Fund and does not represent the total returns of the Fund.

The **SEC Standardized Yield** is a standard yield calculation developed and required by the Securities and Exchange Commission (SEC). It is based on the most recent 30-day period covered by the Fund's filings with the SEC. The yield reflects the dividends and interest earned during the period, after the deduction of the Fund's expenses. This is also referred to as the "Standardized Yield." The Trailing 12-Month Distribution Yield is calculated by using the sum of all Fund distributions paid over the last four quarters and dividing by the Fund's NAV as of 09/30/2012. This measure represents the yield over the prior twelve months if the investor had purchased the Fund and held it for a year, assuming no change in NAV. It may not be an accurate reflection of the actual return an investor may have received because the Fund's NAV is constantly changing due to market factors.

There are risks associated with investing including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in real estate involve additional special risks, such as credit risk, interest rate fluctuations and the effect of varied economic conditions. Funds that focus their investments in one country or region may be significantly impacted by events and developments associated with the region which can adversely affect performance. Funds focusing on a single sector and/or smaller companies generally experience greater price volatility. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Inflation protected securities do not eliminate risks associated with inflation or deflation. Investments in currency involve additional special risks, such as credit risk and interest rate fluctuations. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. As these Funds can have a high concentration in some issuers the Funds can be adversely impacted by changes affecting such issuers.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline. One of the risks associated with the Managed Futures Strategy Fund (WDTI) and the Global Real Return Fund (RRF) is the complexity of the different factors which contribute to each Fund's performance, as well as their correlation (or non-correlation) to other asset classes. These factors include use of long and short positions in commodity futures contracts, currency forward contracts, swaps and other derivatives. An investment in WDTI is speculative and involves a substantial degree of risk. WDTI should not be used as a proxy for taking long only (or short only) positions in commodities or currencies. In markets without sustained price trends or markets that quickly reverse or "whipsaw" WDTI may suffer significant losses. Unlike typical exchange-traded funds, there are no indexes that the Currency Funds, Fixed Income Funds, WDTI or RRF attempt to track or replicate. Thus, the ability of these Funds to achieve their objectives will depend on the effectiveness of the portfolio manager. Due to the investment strategy of certain Fund's they may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

This information must be preceded or accompanied by a prospectus [click here to view or download prospectus](#). We advise you to consider the Fund's objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other important information about the Fund. Please read the prospectus carefully before you invest.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

ALPS Distributors, Inc. is not affiliated with the Dreyfus Corporation, sub-adviser for the Currency Funds.

Performance less than one year is cumulative.
