

Fund Overview

The Fund seeks to achieve total returns reflective of both money market rates in China available to foreign investors and changes in value of the Chinese yuan relative to the U.S. dollar. The Chinese yuan is a developing market currency, which can experience periods of significant volatility. Although the Fund invests in very short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

Investment Strategy Description

The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to Chinese currency and money market rates. Because the market for money market securities in China generally is less liquid and accessible to foreign investors than corresponding markets in more developed economies, the Fund intends to achieve exposure to currency markets in China using a variety of investment techniques. For example, the Fund will invest in short-term U.S. money market securities and forward currency contracts and currency swaps that settle in U.S. dollars. The combination of U.S. money market securities and forward currency contracts and swaps is designed to provide exposure equivalent to money market securities denominated in Chinese yuan. The Fund also will invest in money market securities and other instruments, including forward currency contracts and swaps, denominated in Chinese yuan that trade and settle in Hong Kong and other markets outside of mainland China (sometimes referred to as the "CNH market"). Eligible yuan-denominated investments include time deposits of commercial banks, short-term corporate debt, and short-term debt issued by the government of China (including its agencies and instrumentalities). The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. The Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. Forward currency contracts and swaps generally will be kept to an average term of six months or less.

Performance of less than one year is cumulative. You cannot invest directly in an index.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

CREDIT RATINGS

Credit ratings apply to the underlying holdings of the Fund, and not to the Fund itself. Standard & Poor's, Moody's and Fitch study the financial condition of an entity to ascertain its creditworthiness. The credit ratings reflect the rating agency's opinion of the holdings financial condition and histories. The ratings displayed are based on the highest of each portfolio constituent as currently rated by Standard and Poor's, Moody's, or Fitch. Long term ratings are generally measured on a scale ranging from AAA (highest) to D (lowest) while short term ratings are generally measured on a scale ranging from A-1 to C. In the event that a sovereign bond is not individually rated, the issuer's Long Term Foreign Currency rating is used.

EFFECTIVE DURATION

This statistic provides a measure of the sensitivity of the Fund's price to changes in interest rates and is calculated as the weighted average of the individual bond effective durations. Effective duration recognizes that changes in interest rates may also change the expected cash flows generated by any underlying bonds with embedded options. The calculation is expanded to incorporate the contribution of derivatives to the overall interest rate risk sensitivity to the portfolio. Credit ratings apply to the underlying holdings of the Fund, and not to the Fund itself. S&P and Moody's study the financial condition of an entity to ascertain its creditworthiness. The credit ratings reflect the rating agency's opinion of the holdings financial condition and histories.

EMBEDDED INCOME YIELD

Embedded Income Yield represents the annualized rate of return generated by a Fund's investment in forward currency contracts and U.S. government securities. The calculation is intended to show the yield of the Fund's portfolio without the impact of currency exchange rates on the Fund's investments and assumes that foreign exchange rates remain constant. Embedded income yield differs from a Fund's actual yield and does not reflect Fund expenses. A currency forward contract is an agreement by two parties to transact in currencies at a specific rate on a future date and then cash settle the agreement with a simple exchange of the market value difference between the current market rate and the initial agreed-upon rate.

FORWARD CONTRACT GAIN/LOSS

The total Gain/Loss on the Forward Currency Contracts.

FORWARD CONTRACT NOTIONAL

The total notional value of the Forward Currency Contracts stated in U.S. dollars.

FUND DISTRIBUTION YIELD

The Fund Distribution Yield is calculated by annualizing the most recent Fund distribution and dividing by the Fund's current NAV. The yield represents a single distribution from the Fund and does not represent the total returns of the Fund.

JPMORGAN EMERGING LOCAL MARKETS INDEX PLUS (ELMI+) CHINA (IN USD TERMS)

The JPMorgan Emerging Local Markets Index Plus and its underlying country and regional subindices track the total returns for local-currency denominated money market instruments in emerging market countries. The China subindex uses a weighted basket of 1-, 2-, 3- months currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in local-currency money market instruments. The returns are reported in U.S. dollar terms.

SEC 30-DAY YIELD

The yield figure reflects the dividends and interest earned during the period, after the deduction of the Fund's expenses. This is also referred to as the "standardized yield."

YIELD TO MATURITY

Portfolio Yield to Maturity represents the weighted average yield to maturity of a Fund's investments in money market securities and short-term fixed income securities as of a specified date. Yield to maturity is the rate of return generated on a fixed income instrument assuming interest payments and capital gains or losses as if the instrument is held to maturity. The weighted average yield is calculated based on the market value of each fixed-income investment. The calculation does not incorporate yield from any currency forward contracts

that might be part of the Fund's investments.

CHINESE YUAN

Currency return calculated by WisdomTree as the percentage difference between the end of quarter spot rate and the beginning of the quarter spot rate.

This information must be preceded or accompanied by a prospectus. We advise you to consider the Fund's objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other important information about the Fund. Please read the prospectus carefully before you invest. There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. This Fund focuses its investments in China, thereby increasing the impact of events and developments associated with the region which can adversely affect performance. Investments in emerging or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Investments in currency involve additional special risks, such as credit risk and interest rate fluctuations. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. As this Fund can have a high concentration in some issuers the Fund can be adversely impacted by changes affecting those issuers. Unlike typical exchange-traded Funds, there are no indexes that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objectives will depend on the effectiveness of the portfolio manager. Due to the investment strategy of this Fund it may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
