

Fund Overview

The WisdomTree Asia Local Debt Fund (the "Fund") seeks a high level of total return consisting of both income and capital appreciation.

Investment Strategy Description

The Fund attempts to achieve its investment objective through investment in bonds denominated in currencies of Asia ex-Japan countries ("Local Debt"). Local Debt includes

- fixed income securities issued by Asia ex-Japan governments, agencies, and corporations denominated in the local currency,
- fixed income securities issued in an Asia ex-Japan currency by supranational organizations, such as the International Bank for Reconstruction and Development, or regional development banks supported by state governments, and
- other instruments, such as derivatives, designed to provide similar exposure.

The Fund is designed to provide a broad exposure to Local Debt of issuers from a range of Asia ex-Japan countries including: Australia, China, Hong Kong, India, Indonesia, Malaysia, New Zealand, Philippines, Singapore, South Korea, Taiwan, and Thailand.

Performance of less than one year is cumulative. You cannot invest directly in an index.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

MARKIT IBOXX ASIAN LOCAL BOND INDEX

Markit iBoxx Asian Local Bond Index tracks the total return performance of liquid bonds denominated in the local currencies in China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, and Thailand. Country weightings are driven by market capitalization, liquidity, accessibility, and market development, while security weightings within the countries are based on market capitalization.

EFFECTIVE DURATION

This statistic provides a measure of the sensitivity of the Fund's price to changes in interest rates and is calculated as the weighted average of the individual bond effective durations. Effective duration recognizes that changes in interest rates may also change the expected cash flows generated by any underlying bonds with embedded options. The calculation is expanded to incorporate the contribution of derivatives to the overall interest rate risk sensitivity to the portfolio. Credit ratings apply to the underlying holdings of the Fund, and not to the Fund itself. S&P and Moody's study the financial condition of an entity to ascertain its creditworthiness. The credit ratings reflect the rating agency's opinion of the holdings financial condition and histories.

CREDIT RATINGS

Credit ratings apply to the underlying holdings of the Fund, and not to the Fund itself. Standard & Poor's, Moody's and Fitch study the financial condition of an entity to ascertain its creditworthiness. The credit ratings reflect the rating agency's opinion of the holdings financial condition and histories. The ratings displayed are based on the highest of each portfolio constituent as currently rated by Standard and Poor's, Moody's, or Fitch. Long term ratings are generally measured on a scale ranging from AAA (highest) to D (lowest) while short term ratings are generally measured on a scale ranging from A-1 to C. In the event that a sovereign bond is not individually rated, the issuer's Long Term Foreign Currency rating is used.

FORWARD CONTRACT NOTIONAL

The total notional value of the Forward Currency Contracts stated in U.S. dollars.

FORWARD CONTRACT GAIN/LOSS

The total Gain/Loss on the Forward Currency Contracts.

SWAP GAIN/LOSS

The total gain or loss from the fund's swap position.

FUND DISTRIBUTION YIELD

The Fund Distribution Yield is calculated by annualizing the most recent Fund distribution and dividing by the Fund's current NAV. The yield represents a single distribution from the Fund and does not represent the total returns of the Fund.

SEC 30-DAY YIELD

The yield figure reflects the dividends and interest earned during the period, after the deduction of the Fund's expenses. This is also referred to as the "standardized yield."

YIELD TO MATURITY

Portfolio Yield to Maturity represents the weighted average yield to maturity of a Fund's investments in money market securities and short-term fixed income securities as of a specified date. Yield to maturity is the rate of return generated on a fixed income instrument assuming interest payments and capital gains or losses as if the instrument is held to maturity. The weighted average yield is calculated based on the market value of each fixed-income investment. The calculation does not incorporate yield from any currency forward contracts that might be part of the Fund's investments.

EMBEDDED INCOME YIELD

Embedded Income Yield represents the annualized rate of return generated by a Fund's investments in securities and derivatives exclusive of interest rate changes and movement in foreign exchange spot rates. The calculation is intended to capture the Fund's potential to earn income return over the next year given current holdings and market conditions. The Embedded Income Yield will differ from the portfolio's Yield to Maturity, due to the incorporation of derivatives in the Embedded Income Yield. Embedded Income Yield and Portfolio Yield to Maturity may differ from a Fund's actual distribution and SEC yield and do not reflect Fund expenses.

This information must be preceded or accompanied by a prospectus. We advise you to consider the Fund's objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other important information about the Fund. Please read the prospectus carefully before you invest. There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline. Unlike typical exchange-traded funds, there is no index that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objective will depend on the effectiveness of the portfolio manager. Due to the investment strategy of this Fund it may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.
