

The WisdomTree Asia Local Debt Fund seeks a high level of total returns consisting of both income and capital appreciation. The Fund attempts to achieve its investment objective through investment in local debt denominated in the currencies of a broad range of Asian countries.

During the quarter, the Asia Local Debt Fund generated a net return of -5.83% on net asset value (NAV) underperforming its reference benchmark, the HSBC Asian Local Bond Index, by 1.05%, which returned -4.78%.

The Fund's exposure to Australian debt was a primary catalyst, as the Australian dollar depreciated the most relative to the US dollar among the major Emerging and Developed Market currencies. The Australian currency return contributed over 20% of the overall decline in the fund for the quarter.

Exposures to China and Taiwan were the best performers as their currencies were hurt the least during the broad currency selloff. Overall, principal losses contributed over one-third of losses, while currency produced nearly two-thirds. These losses were mitigated to a degree by income return, which was a positive offset of 0.87%.

Asian debt outperformed other regions. Combined with the shorter duration, the Fund outperformed broader-based Emerging Market focused strategies.

Quarterly Performance Attribution as of 6/30/2013

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, maybe be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00 p.m. EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

*Slippage in calculation comes from timing, treatment of accruals as well as compounding mathematical issues which cannot be perfectly calculated.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds before investing. To obtain a prospectus containing this and other important information, call 1-866-909-WISE (9473) or visit wisdomtree.com. Read the prospectus carefully before you invest.

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuers ability to make such payments will cause the price of that bond to decline. Unlike typical exchange-traded funds, there is no index that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objective will depend on the effectiveness of the portfolio manager. Due to the investment strategy of this Fund it may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

You cannot invest directly in an index.

WisdomTree Funds are distributed by ALPS Distributors, Inc.

The HSBC Asian Local Bond Index tracks the total return performance of liquid bonds denominated in the local currencies in China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, and Thailand. Spot Currency Return is the return based on currency appreciation. Local Principal Return represents returns generated from the market moves of the underlying bonds. Contributed Income Return represents the returns attributed to coupon payments from the underlying bonds.
