

The WisdomTree Australia & New Zealand Debt Fund seeks a high level of total returns consisting of both income and capital appreciation. The Fund attempts to achieve its investment objective through investment in debt securities denominated in Australian or New Zealand Dollars.

As a result of downward revisions in China's economic growth and the prospect of "tapering" by the Federal Reserve, the Australian dollar came under significant pressure (-12.2%) against the U.S. dollar. Additionally, the Australian bond market lost value on account of higher rates over the quarter. Similarly, the New Zealand dollar also depreciated against the U.S. dollar by 7.84% for the quarter. The Fund's exposures to semi-government debt added value relative to Australian government debt on account of higher yields and shorter durations.

During the quarter, the Australia & New Zealand Debt Fund generated a net return of -11.62% on net asset value (NAV) while its reference benchmark, the Spliced Australia & New Zealand Debt Composite, returned -11.41%. The Fund's higher allocation to the Australian dollar relative to the New Zealand dollar detracted from performance as the Australian dollar depreciated at a greater pace than the New Zealand dollar.

Quarterly Performance Attribution as of 6/30/2013

Country	Currency	Weight (%)	Spot Currency Return (%)	Currency Return (%)	Bond Return (%)			Overall Return (%)
				Contribution	Local Principal	Contributed Income	Total	Total
Australia

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, maybe be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00 p.m. EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

*Slippage in calculation comes from timing, treatment of accruals as well as compounding mathematical issues which cannot be perfectly calculated.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds before investing. To obtain a prospectus containing this and other important information, call 1-866-909-WISE (9473) or visit wisdomtree.com. Read the prospectus carefully before you invest.

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions. The Fund focuses its investments in Australia and New Zealand, thereby increasing the impact of events and developments in Australia and New Zealand that can adversely affect performance.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline. Unlike typical exchange-traded funds, there is no index that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objective will depend on the effectiveness of the portfolio manager. Due to the investment strategy of this Fund it may make higher capital gain distributions than other ETFs. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

You cannot invest directly in an index.

WisdomTree Funds are distributed by ALPS Distributors, Inc.

The Spliced Australia & New Zealand Debt Composite tracks an 80% / 20% weighted exposure to the local currency bond markets of Australia and New Zealand, respectively. Performance for Australia is proxied by the total returns of the Citigroup Australian Broad Investment-Grade Index. Performance for the New Zealand bond market is proxied by the JPMorgan New Zealand Government Bond Index. Country exposures are rebalanced back to target weighting quarterly. The Citigroup Australian Broad Investment-Grade Index is a market capitalization weighted index designed to represent the Australian fixed-coupon bond market, including government, semi-government, and investment grade credit markets (including supranational issuers). The JPMorgan New Zealand Government Bond Index is a market capitalization weighted index of locally denominated, fixed rate government debt. Spot currency return is the return based on currency appreciation. Local Principal Return represents returns generated from the market moves of the underlying bonds. Contributed Income Return represents the returns attributed to coupon payments from the underlying bonds. Sovereign Bonds denote bonds issued by the national government of a country while Semi-Government Bonds are issued by the Australian Semi-Governments (Australian federated states). Supranational Bonds are issued by entities, regional or international organizations comprised of member countries, that exist for the purpose of global economic development and financial stability.
