What's Hot: Bank of Japan sitting on the fence on easy policy exit

Central banks packed quite a punch last week. Unlike the Federal Reserve and the European Central Bank that raised policy rates by 25Bps, as was widely anticipated, the Bank of Japan (BOJ) on July 28 unexpectedly decided to tweak the Yield Curve Control (YCC) band.

The BOJ begins its withdrawal from YCC

It will now allow some deviation above the long-term rate cap of 0.5% and has raised the rate for its 10yr Japanese Government Bond (JGB) fixed-rate purchase operations to 1%. They are effectively doubling their YCC band as it has outlived its purpose over the last seven years. This is despite Governor Kazuo Ueda stressing the BOJs patience a week prior to the meeting leading to 82% of the economists surveyed by Bloomberg expecting no change. There is a strong likelihood the decision was made because the market was least expecting it, similar to the last YCC policy tweak made in December 2022. As it helps avoid the inevitable speculation about the impact of the change on the JGB curve thereby forcing the BOJ to step up its interventions.

It's hard to determine whether the new YCC with greater flexibility and nimble responses in its purchase schedule will achieve the BOJs goal of sustainable and stable achievement of the 2% inflation target. Longer dated JGB yields are likely to stay under upward pressure until clearer signs emerge that Japanese inflation and wage pressure are easing again.

Core inflation at highest level since 1982

The deflationary headwinds confronting Japan have been around for decades. Signs of change have been seen in firms' wage- and price-setting behaviour, and inflation expectations have shown some upward movements again (as seen in the chart above).

Spring in Japan is the season for shunto, the annual wage negotiations between company management and unions. This year some firms have already announced significant wage hikes in response to a tightening labour market and rising inflation. May wages rose by 2.9%[1]. However, a large part of the increase was tied to bonuses. Real wages fell by less but continued to decline by 0.9%[2]. Japanese

headline inflation stayed at 3.2% year on year in July for three consecutive months[3]. However, core inflation excluding fresh food and energy, reaccelerated to 4.2%, marking the highest level since April 1982.

Looking ahead, headline inflation will likely slow owing to falling global commodity prices and base effects but core inflation will likely remain higher owing to structural change in the labour market.

BOJ struck a dovish tone with below target inflation forecasts

The BOJ's inflation forecasts for the fiscal years ahead are expected to slow further. The BoJ lowered its (median) forecast for FY2024 to +1.9%[4] and left its FY2025 projection unchanged at +1.6%[3], in effect justifying ongoing easing from the Bank of Japan. BoJ Governor Ueda mentioned at the press conference that there is still some distance to foresee 2% price stability target in a stable and sustainable manner given our inflation outlook for FY2024 and FY2025. This echoes a dovish narrative on the new YCC regime and a continued communication that the BOJ intends to in effect ease policy by still increasing the monetary base via fixed operations.

More volatility beckons for risk assets

The initial response to the BOJs surprise decision was a sharp rise in Japanese bond yields. Japan's benchmark bond yields surged, extending gains above the central bank's previous 0.5% cap. The yen whipsawed, falling more than 1% before reversing course and rallying to trade about the same amount higher.

On Monday 31st July, the BOJ sprung another surprise announcement (2 days post the BOJ meeting) of an unscheduled bond-purchase operation to stem the rise in yields[5]. The BOJ intends to purchase ¥300Bn of five-to-10-year notes at market yields. This serves as an important reminder that the flexibility is intertwined with opaqueness, as the BOJ can intervene at any time (between 0.5% to 1%) which will continue to stoke volatility across risk assets. The BOJ has positioned the YCC as enhancing sustainability of its current accommodative policy. With Japan's monetary environment likely to be kept relatively loose, the yen is likely to trade in a volatile range for the remainder of 2023.
