Key Takeaways

- The Siegel-WisdomTree Model Portfolios represent a groundbreaking collaboration between WisdomTree and industry legend Professor Jeremy Siegel. Launched in 2019, these open-architecture, ETF Model Portfolios offer a fresh approach for advisors seeking to balance current income needs with longevity risk management.
- The Siegel-WisdomTree Model Portfolios are designed for medium- and long-term investors, and the Model Portfolios come in three risk profiles: Siegel-WisdomTree Global Equity Model: 100% equity; Siegel-WisdomTree Longevity Model: 75% equity, 25% fixed income; Siegel-WisdomTree Moderate Model: 60% equity, 40% fixed income.
- The portfolios apply the core investment principles from Professor Siegel's research while also reflecting the ongoing views of WisdomTree's Model Portfolio Investment Committee.

This article is relevant to financial professionals who are considering offering model portfolios to their clients. If you are an individual investor interested in WisdomTree ETF Model Portfolios, please inquire with your financial professional. Not all financial professionals have access to these Model Portfolios.

As the adoption of model portfolios continues to expand, we are seeing a growing number of advisors leveraging third-party portfolios backed by the capabilities of professional asset managers.

At WisdomTree, we believe our Model Portfolio collaboration with industry legend [Professor Jeremy Siegel](#) is truly the first of its kind.

Launched in 2019, this suite of open-architecture ETF Model Portfolios provides an innovative solution to advisors seeking to balance their clients' current income needs while managing longevity risk.

Introducing the Siegel-WisdomTree Model Portfolios

The Siegel-WisdomTree Model Portfolios offer three risk profiles tailored to meet the needs of medium- and long-term investors:

<p>Siegel-WisdomTree GLOBAL EQUITY MODEL</p>  <p>100% Equity</p>	<p>Siegel-WisdomTree LONGEVITY MODEL</p>  <p>75% Equity 25% Fixed Income</p>	<p>Siegel-WisdomTree MODERATE MODEL</p>  <p>60% Equity 40% Fixed Income</p>
<p>Advisors seeking to align their clients' equity investments with the core principles of Professor Jeremy Siegel and WisdomTree</p>	<p>Advisors seeking to provide their clients with an alternative to a traditional portfolio that balances income needs with longevity risk</p>	<p>Advisors looking for a traditional 60/40 portfolio that incorporates the Siegel-WisdomTree Global Equity Model</p>

All three Model Portfolios were designed to offer an efficient, low-cost way to apply the core investment principles from Professor Jeremy Siegel's research, including:

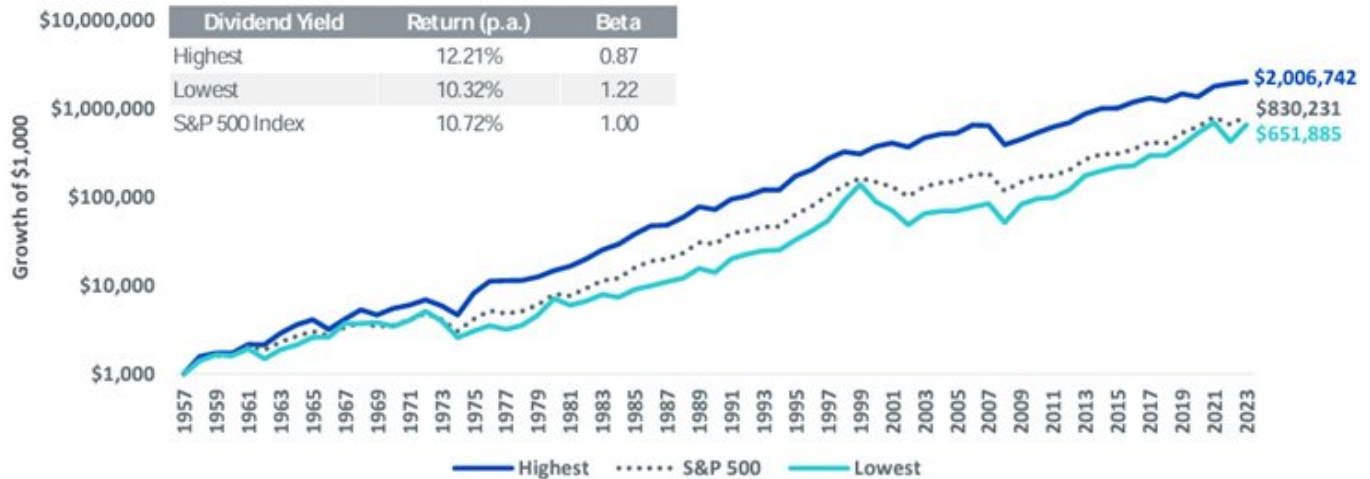

Longer life expectancy requires individuals to rethink their retirement planning and asset allocation.

While the short-term standard deviation of equities is higher than that of bonds, this may not be the most appropriate definition of risk for most investors. Rather, we believe the risk that investors do not reach their retirement goals—shortfall risk—should be weighed more heavily in investors' minds than the day-to-day fluctuations of the stock market.

With longer life expectancies extending individual investor's investment horizons, we believe a greater equity bias (structurally allocating more to equities than to fixed income) is warranted in many client portfolios.

Additionally, when viewed through the lens of maintaining purchasing power, equities can help reduce risk, as stocks have historically been an excellent long-term hedge against inflation.

As Professor Siegel's research below highlights, value and dividend-paying stocks have historically enhanced portfolio returns while experiencing less volatility than growth stocks.

Source: Professor Jeremy Siegel, *The Future for Investors* (2005), source updated for 2022 data. Uses the S&P 500 universe as of 12/31/23. Average annual total returns, 1957–2022. Each stock in the S&P 500 is ranked from highest to lowest by dividend yield on December 31 of every year and placed into “quintiles,” baskets of stocks, with 100 stocks in each basket. The stocks in the quintiles are weighted by their market capitalization. Top and bottom quintiles are shown for simplicity. The dividend yield is defined as each stock’s annual dividends per share divided by its stock price as of December 31 of that year. p.a.=per annum. **Past performance is not indicative of future results.** You cannot invest directly in an index.

Therefore, the equity allocations of the Model Portfolios tilt toward factors such as dividend yield and low price-to-earnings (P/E) ratios to seek higher income generation and outperformance potential.

A fully diversified, global equity portfolio offers potential for long-term return and risk diversification benefits.¹

The models provide diversified exposure to U.S. and international stocks. Although U.S. stocks have outperformed over the past decade², this has not always been the case. Moreover, we believe lower equity valuations found outside of the U.S. could potentially result in attractive returns over the long-term.

Leveraging Professor Siegel’s Insights and WisdomTree’s Professional Investment Platform for Your Clients

In today’s rapidly changing market environment, we see a growing number of advisors leaning into model portfolios and leveraging the professional investment capabilities of WisdomTree and our Senior Economist, Professor Jeremy Siegel.

The Siegel-WisdomTree Model Portfolios, available for advisors across several third-party model platforms, are built to deliver for your clients over the long term so that you can focus on building and managing your relationships.

Beyond model portfolio management, advisors also gain access to Professor Siegel’s market views and positioning via [weekly market commentary](#), webcasts and other materials designed to help you effectively communicate with your clients.

1 Diversification does not guarantee a profit or eliminate the risk of a loss.

2 In the ten-year period ending March 31, 2024, the S&P 500 Index delivered an annualized total return of 12.96% compared to a 4.24% annualized total return on the MSCI ACWI Ex-US Index.
