

Rethinking the Golden Allocation

Published November 18, 2025

Key Takeaways

- Amid shifting macro conditions and declining faith in traditional 60/40 portfolios, investors are reimagining gold not as a fear-based hedge, but as a core allocation for structural resilience in 2025.
- Europe's growing institutional embrace of gold, now equal in allocation to sovereign bonds, is reshaping global portfolio norms and accelerating adoption of real assets like ETFs in the U.S.
- Capital-efficient strategies like [GDMN](#) and [GDE](#) are redefining diversification by delivering dual exposures to gold with miners or equities within a single position, amplifying returns without fragmenting capital.

There's a quiet revolution taking shape in portfolios. For decades, the 60/40 mix—60% equities, 40% bonds—was the shorthand for prudence, diversification and balance.¹ But the regime that made that formula work—low inflation, stable growth and negative stock-bond return correlations—appears to have shifted. After 2022, investors tend to question how well bonds may dampen equity risk.² In this new macro geometry, investors are re-examining what the "40" should really be. Morgan Stanley's latest *Global Insights* calls gold "an attractive hedge against fiscal largesse and geopolitics," noting its 50% rally year-to-date and near-zero equity correlation.³ Gold is not just a store of value; it's a statement about the limits of paper promises.

Allocating to gold in 2025 isn't about fear; it's about function. Exchange-traded fund (ETF) inflows of more than \$10 billion in September alone show that institutional and retail investors alike are beginning to re-engineer portfolios for an era of structural deficits and active fiscal policy.⁴ The asset's behavior has evolved: what was once a rate-sensitive trade has become a *fiscal-risk hedge*. Correlations with Treasury yields have flipped from deeply negative to positive, implying that gold now rises with, not against, higher long-term rates when those rates reflect sovereign stress.⁵ That's an inversion of an old mental model. Investors aren't running from volatility; they're buying the only liquid asset that sits *outside* the liabilities of any government or central bank.

The conceptual shift is profound. Instead of treating gold as an accessory to a portfolio, some strategists now treat it as a *core sleeve of real assets*—a 20% reallocation from the bond bucket that acknowledges diversification is no longer about opposites, but about orthogonality.⁶ For allocators, this isn't nostalgia for

the gold standard; it's recognition that the architecture of portfolio resilience is changing. The new 60/20/20 mindset—equities, fixed income and real assets—may prove less a radical break than a quiet return to first principles: holding something that no one else owes you.

Europe's Gold Awakening, and Why It Matters for U.S. Investors

European investors are signaling something important about global portfolio behavior. In WisdomTree's 2025 Investor Survey of 802 European and U.K. participants, gold ranked as the top safe-haven asset, with 41% of respondents identifying it as their preferred store of value, well ahead of Bitcoin and the U.S. dollar. Perhaps more telling, **average portfolio allocations to gold now stand at 5.7%**, equal to holdings in developed-market sovereign debt. That balance suggests gold is no longer viewed as a fringe diversifier but as a mainstream, fixed component of institutional portfolios. In a globalized capital system, these regional shifts don't stay regional; European reallocations toward real assets inevitably influence global flows and price discovery, amplifying gold's liquidity and institutional relevance across markets.

Equally notable is how investors are choosing to access gold. The survey shows **nearly 40% favor exchange-traded products (ETPs)**, far surpassing preferences for physical bullion, futures or mining equities. The logic is pragmatic: ETPs deliver transparency, low cost and scalability that fit the modern portfolio construction toolkit. For U.S. investors, the European experience is an instructive case study. It suggests that the conversation about gold's role has moved beyond the "why" to the "how." As more allocators integrate gold as a *core sleeve* within real assets rather than a tactical overlay, the result may be a gradual convergence between U.S. and European portfolio design, one in which hard assets are recognized not as outliers, but as foundational pillars of modern diversification.

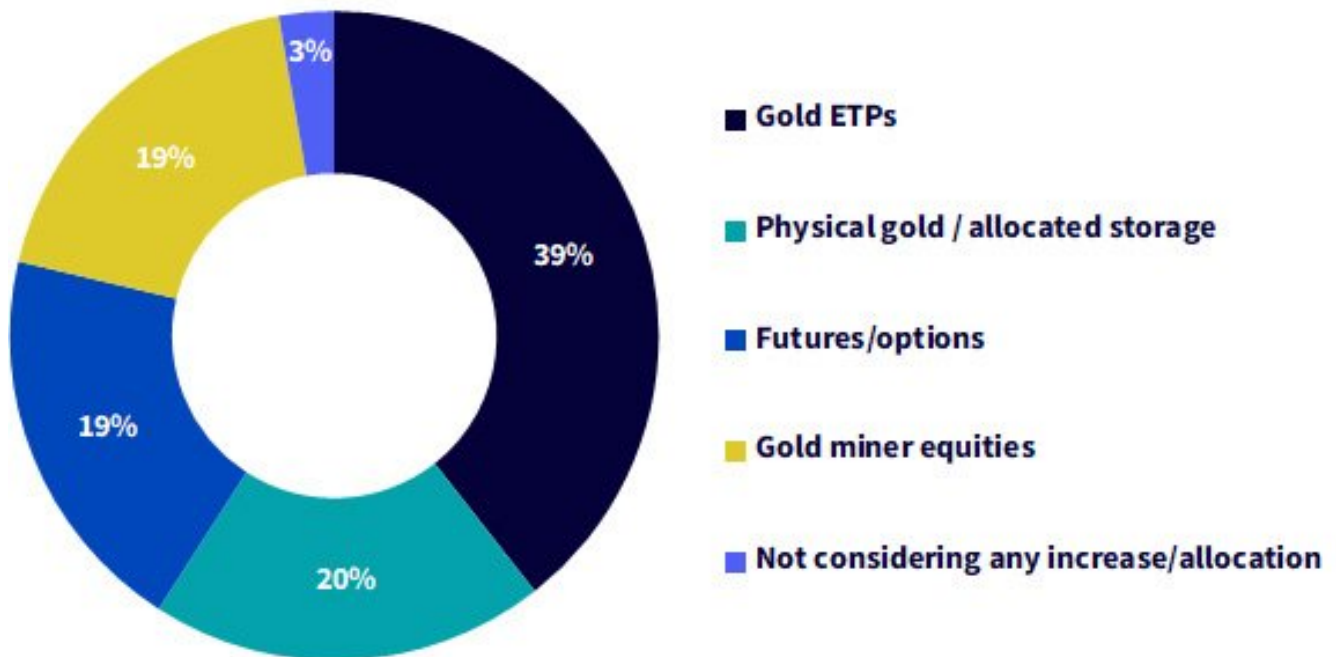

Figures 1 and 2 follow with an illustration of some of these results.

The Next Step: Rethinking How to Hold Gold

For decades, gold exposure came down to a binary choice: physical bullion or an ETF like the SPDR Gold Shares (GLD), where each share represents a portion of physical gold stored in a vault. There has also been the option to look at the VanEck Gold Miners ETF (GDX) for those seeking to own businesses directly connected to gold rather than the metal itself. But as portfolio construction evolves, investors are no longer confined to "either/or" decisions. The rise of capital-efficient strategies means a single allocation can now express multiple exposures—gold and miners, or gold and equities—within the same position. That shift reframes gold from a static diversifier to a dynamic building block capable of compounding its impact across asset classes.

- The [WisdomTree Efficient Gold Plus Gold Miners Strategy Fund \(GDMN\)](#) is built around a simple idea: one allocation, two sources of return. Rather than forcing investors to choose between physical gold and the companies that mine it, the Fund combines both. For every \$100 invested, about **\$90 goes into gold-mining equities** and **\$90 into gold futures**, with a small **\$10 collateral position in U.S. Treasuries** to anchor the structure. The result is a *capital-efficient* exposure, roughly equivalent to holding \$180 of notional exposure to traditional gold and mining assets for every \$100 deployed. It's a modern expression of leverage through portfolio design, giving investors a way to pursue gold's dual drivers—metal and equity beta—within a single, efficient sleeve.

In practical terms, this evolution is about optimization, not substitution. Investors seeking gold's defensive and inflation-hedging properties can now pursue those aims without sacrificing growth or efficiency. The question is no longer just how much gold belongs in a portfolio, but *what kind* of gold exposure delivers the most robust potential outcome.

Proof in the Performance

Performance data reinforces the structural advantage of capital-efficient design. As of late October 2025, [GDMN](#) has far outpaced both [GDX](#) and [GLD](#), delivering a roughly 157% year-to-date total return, compared with 102% for [GDX](#) and 50.8% for [GLD](#). Over every measured period—one-year, three-year and the longest common track record—[GDMN](#) consistently led the way. The visual arc of its performance tells the story: when gold rallied, [GDMN](#) captured the metal's momentum *and* the mining equity beta in one line item. That dual exposure has allowed it to magnify upside while maintaining liquidity and simplicity. It's a clear illustration that portfolio innovation isn't just about holding more; it's about doing more with the same dollar, a theme echoed across WisdomTree's capital-efficient strategies.

We'd recognize that 2025 is an example of a year when both gold and gold mining equities saw very strong positive returns. In years where both of these see negative returns, [GDMN](#) can be pulled downward

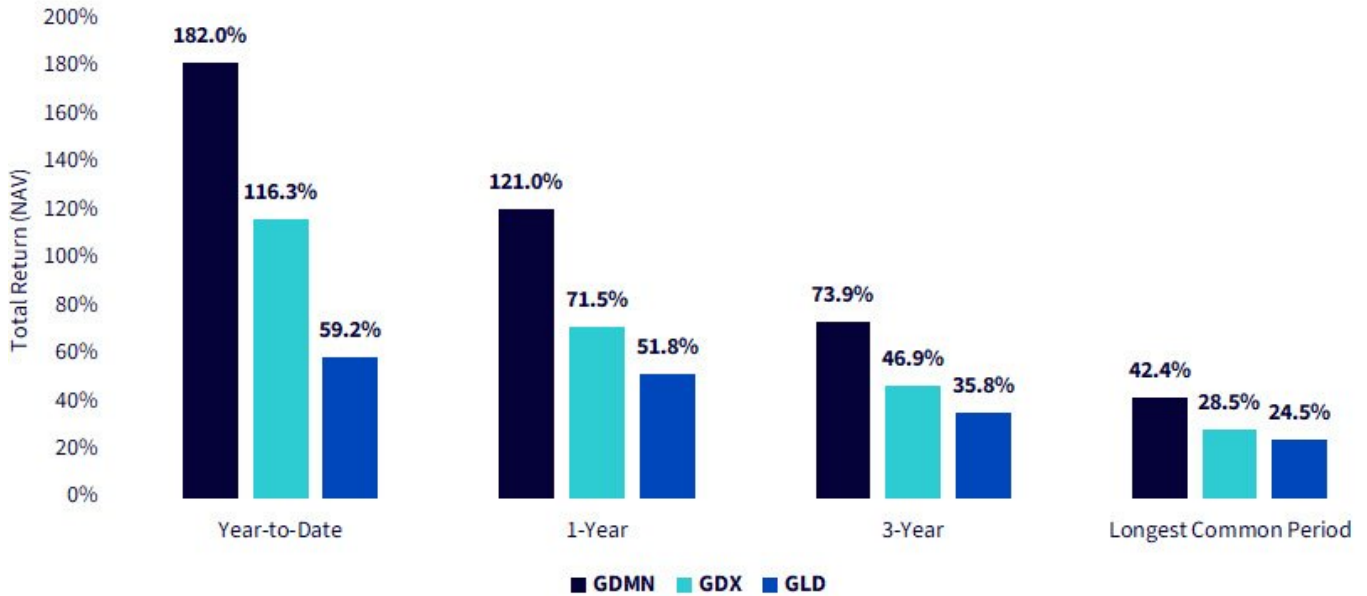

further than either the price of gold or the performance of the miners alone. It's important to understand the uniqueness of roughly the first 10 months of 2025.

Figure 4a: Dual Exposure, Amplified Results

Sources: WisdomTree, FactSet; specifically, data from the Fund Comparison Tool in the PATH suite of tools, accessed 11/5/25, with returns as of 11/4/25. NAV denotes total return performance at net asset value. **Past performance is not indicative of future results. Past performance is not indicative of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For the most recent month-end and standardized performances, click the relevant ticker: [GDMN](#), [GDX](#), [GLD](#).

The performance story for [GDE](#) underscores the value of pairing equity growth with gold's defensive ballast inside a single structure. As of early November 2025, [GDE](#) delivered a 60.2% total return year-to-date, compared with 16.4% for the S&P 500 Index. Across every measured period—one-year, three-year and the longest common track record—[GDE's](#) returns have been roughly three times higher. The Fund's 90/90 design, full equity exposure plus an equivalent notional allocation to gold, has turned diversification into a source of incremental return rather than opportunity cost. When U.S. equities rallied, [GDE](#) captured that strength; when volatility or fiscal fears boosted gold, the portfolio's overlay amplified resilience. It's a live demonstration that diversification, when engineered efficiently, can compound performance rather than dilute it.

While the strategy was designed with "defensive ballast" of gold in mind, that's not what we experienced during roughly the first 10 months of 2025, when we saw equities largely rising and gold rising by even more. It's important to understand that [GDE](#) may experience years when both gold and equities drop, and how [GDE](#) may drop by more than either of the two individually. However, if history is any sort of guide, the more likely expectation would be equities going in one direction and gold remaining more stable or going in the other.

Conclusion: The New Role of Gold in Portfolios

From Diversification to Design: The New Role of Gold in Portfolios

Gold's resurgence in 2025 is more than a price story; it's a portfolio story. In a world where bonds no longer provide the ballast they once did, investors are rebuilding diversification from the ground up. The WisdomTree European Investor Survey showed a clear shift: allocators are not merely holding gold, they're institutionalizing it, embedding it beside sovereign debt and equities as a core element of long-term strategy. This reflects a broader evolution in portfolio design, away from static 60/40 constructs and toward capital-efficient, multi-exposure frameworks.

Recent volatility, where gold briefly surged past **\$4,300 per ounce** before consolidating, hasn't shaken that conviction. Rather than a reversal, the pullback looks like a healthy pause in an ongoing structural advance. The drivers remain intact: a weaker dollar, falling bond yields, persistent inflation, elevated policy uncertainty and unresolved geopolitical risks.

Funds such as **GDMN** and **GDE** embody how investors can translate that macro view into portfolio reality. By layering exposures, gold, miners and equities, within a single, efficient structure, they blend growth and defense without fragmenting capital. The result is resilience built through integration, not isolation. As fiscal

expansion, higher volatility and shifting correlations define the next market era, capital-efficient real-asset strategies may stand as the most disciplined way to stay both diversified *and* adaptive.

Figure 6: Additional Information

Fundamentals	WisdomTree Efficient Gold Plus Equity Strategy Fund	WisdomTree Efficient Gold Plus Gold Miners Strategy Fund	VanEck Gold Miners ETF	SPDR Gold Shares
Objective	The WisdomTree Efficient Gold Plus Equity Strategy Fund seeks total return by investing in 500 large cap U.S. equities, market capitalization-weighted, and gold futures contracts. The exposure is designed such that for each \$100, \$90 is exposed to equities of gold miners, \$90 is exposed to gold futures contracts, and \$1 is in U.S. treasury collateral.	The WisdomTree Efficient Gold Plus Gold Miners Strategy Fund seeks total return by investing in gold miners and gold futures contracts. The exposure is designed such that for each \$100, \$90 is exposed to equities of gold miners, \$90 is exposed to gold futures contracts, and \$10 is in U.S. treasury collateral.	VanEck Gold Miners ETF (GD ^X) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the NYSE Arca Gold Miners Index (GDMNTR), which is intended to track the overall performance of companies involved in the gold mining industry.	The investment objective of SPDR [®] Gold Trust (the "Trust") is for SPDR [®] Gold Shares ("GLD") to reflect the performance of the price of gold bullion, less the Trust's expenses.

Important Risks Related to this Article

All funds are managed differently and do not react the same to economic or market events. The investment objectives, strategies, policies or restrictions of other funds may differ, and more information can be found in their respective prospectuses. Therefore, we generally do not believe it is possible to make direct fund-to-fund comparisons in an effort to highlight the benefits of a fund versus another similarly managed fund.

Material must be preceded or accompanied by a prospectus. Click the respective ticker to view the Fund prospectus: [GDMN](#), [GDE](#), [GLD](#), [GDX](#).

GDMN: There are risks associated with investing, including the possible loss of principal. The Fund is actively managed and invests in U.S.-listed gold futures and global equity securities issued by companies that derive at least 50% of their revenue from the gold mining business (“gold miners”). The Fund’s use of U.S.-listed gold futures contracts will give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. Moreover, the price movements in gold and gold futures contracts may fluctuate quickly and dramatically and have a historically low correlation with the returns of the stock and bond markets. By investing in the equity securities of gold miners, the Fund may be susceptible to financial, economic, political or market events that impact the gold mining sub-industry, including commodity prices and the success of exploration projects. The Fund may invest a significant portion of its assets in the securities of companies of a single country or region, including emerging markets, and thus, the Fund is more likely to be impacted by events and political, economic or regulatory conditions affecting that country or region, or emerging markets generally. The Fund’s investment strategy will also require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds, which may cause the Fund to recognize capital gains. Please read the Fund’s prospectus for specific details regarding the Fund’s risk profile.

GDE: There are risks associated with investing, including the possible loss of principal. The Fund is actively managed and invests in U.S.-listed gold futures and U.S. equity securities. The Fund’s use of U.S.-listed gold futures contracts will give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. Moreover, the price movements in gold and gold futures contracts may fluctuate quickly and dramatically and have a historically low correlation with the returns of the stock and bond markets. U.S. equity securities, such as common stocks, are subject to market, economic and business risks that may cause their prices to fluctuate. The Fund’s investment strategy will also require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds, which may cause the Fund to recognize capital gains. Please read the Fund’s prospectus for specific details regarding the Fund’s risk profile.

GDX: An investment in the Fund may be subject to risks that include, but are not limited to, risks related to investments in gold and silver mining companies, special risk considerations of investing in Australian and Canadian issuers, foreign securities, emerging market issuers, foreign currency, depositary receipts, small- and medium-capitalization companies, equity securities, market, operational, index tracking, authorized participant concentration, no guarantee of active trading market, trading issues, passive management,

Fund shares trading, premium/discount risk and liquidity of Fund shares, and non-diversified and index-related concentration risks, all of which may adversely affect the Fund. Emerging market issuers and foreign securities may be subject to securities markets, political and economic, investment and repatriation restrictions, different rules and regulations, less publicly available financial information, foreign currency and exchange rates, operational and settlement, and corporate and securities laws risks. Small- and medium-capitalization companies may be subject to elevated risks.

GLD: Investing involves risk, and you could lose money on an investment in GLD.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETF's net asset value. Brokerage commissions and ETF expenses will reduce returns.

Commodities and commodity-index-linked securities may be affected by changes in overall market movements, changes in interest rates and other factors such as weather, disease, embargoes or political and regulatory developments, as well as the trading activity of speculators and arbitrageurs in the underlying commodities.

Frequent trading of ETFs could significantly increase commissions and other costs, such that they may offset any savings from low fees or costs.

Diversification does not ensure a profit or guarantee against loss.

GLD has filed a registration statement (including a prospectus) with the Securities and Exchange Commission ("SEC") for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents GLD has filed with the SEC for more complete information about GLD and this offering. Please see the GLD prospectus for a detailed discussion of the risks of investing in GLD shares. You may get these documents for free by visiting EDGAR on the SEC website at sec.gov or by visiting spdrgoldshares.com. Alternatively, GLD or any authorized participant will arrange to send you the prospectus if you request it by calling 866.320.4053.
