

Siegel on Challenges for the S&P 500 Index Returns: Why 2025 May Be the Year for Selling Options

Published February 7, 2025

Christopher Gannatti, CFA

Global Head of Research

Key Takeaways

- With the S&P 500 Index expected to deliver modest gains in 2025, option-writing strategies like PUTW may offer attractive income opportunities during periods of heightened market uncertainty.
- The [WisdomTree PutWrite Strategy Fund \(PUTW\)](#) seeks to generate consistent income by selling put options bi-weekly and investing in U.S. Treasury bills, targeting a premium of 2.5%.
- [PUTW's](#) approach emphasizes higher income potential through increased equity market sensitivity, making it a compelling choice for investors navigating uncertain market conditions.

If Professor Siegel's views for 2025 come to pass, we think it could be a more interesting year to consider strategies that sell options, as option premiums could go up during more volatile equity environments.

The Morningstar Derivative Income Category

Morningstar places option-writing funds within the Derivative Income category. As of December 31, 2024, the largest fund by assets within this category was the JPMorgan Equity Premium Income ETF (JEPI), with more than \$36 billion.² This strategy employs a basket of defensively oriented equities and combines this with selling call options against the basket to increase the overall income generation of the fund.

The [WisdomTree PutWrite Strategy Fund \(PUTW\)](#) is different.

- Instead of selling call options, the strategy sells put options. Specifically, [PUTW](#) seeks to track the price and yield performance, before fees and expenses, of the Volos US Large Cap Target 2.5% PutWrite Index.
- The index methodology specifies selling options every two weeks, not every month.
- Instead of holding an underlying basket of equities, the strategy holds a basket of short-term, U.S. Treasury securities.

While it is tempting to zero in on the selling of put options versus call options as the primary difference, the tricky thing about the world of options is that, if we assume the same underlying—such as the S&P

500 Index—the concept of put-call parity means that selling at-the-money puts or at-the-money calls could yield a very similar return.

- The call-writing approach contains underlying equities.
- The put-writing approach contains U.S. Treasury bills.

The primary difference between JEPI and [PUTW](#) comes down to the fact that JEPI is using a strategy of active stock selection in addition to selling the options, whereas [PUTW](#) is focused on an S&P 500 Index exposure, at least from an equity perspective. Below, figure 1 shows the average annual total returns for [PUTW](#) and JEPI.

Figure 1: Average Annual Total Returns

Fund/Index Name	Fund Ticker Symbol	Fund Expense Ratio	Fund Inception Date	SEC 30-Day Yield	Year-to-Date	1-Year	3-Year	5-Year	10-Year	Since Fund Inception
WisdomTree PutWrite Strategy Fund (NAV)	PUTW	0.44%	2/24/2016	4.46%	17.02%	17.02%	6.70%	8.40%	N/A	7.75%
WisdomTree PutWrite Strategy Fund (MP)	PUTW	0.44%	2/24/2016	4.46%	16.88%	16.88%	6.66%	8.40%	N/A	7.72%
JPMorgan Equity Premium Income ETF (NAV)	JEPI	0.35%	5/20/2020	7.08%	12.56%	12.56%	6.06%	N/A	N/A	12.40%
JPMorgan Equity Premium Income ETF (MP)	JEPI	0.35%	5/20/2020	7.08%	12.58%	12.58%	6.05%	N/A	N/A	12.44%
S&P 500 Index					25.02%	25.02%	8.94%	14.53%	13.10%	N/A

MP denotes market price performance. **Past performance is not indicative of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For PUTW's most recent month-end and standardized performance, click [here](#). Performance of less than one year is not annualized.**

A Capacity for Income Generation

An attribute of selling options that many investors appreciate is the income. Even with short-term interest rates currently above 0%, the demand for income-generating investments is always there.

- [PUTW](#) uses a strategy that, every two weeks, is seeking to sell an option with a 2.5% premium. A good heuristic with regard to S&P 500 Index options is to look at the VIX Index³ and consider that a monthly at-the-money option on the S&P 500 Index underlying is roughly the VIX Index value/10, expressed as a percentage. If the VIX Index is reading a 25, then $25/10=2.5$, which is expressed as 2.5%. The VIX Index is usually below 25, which means that to derive a 2.5% premium requires selling in-the-money options. The income generation is there, but the consequence of selling in-the-money options is that there is a greater sensitivity to movements in the S&P 500 Index.
- JEPI is seeking to sell out-of-the-money S&P 500 Index options. These options may have lower premiums, but also have lower sensitivity to equity market movements.

On the subject of [PUTW's](#) monthly distributions, the Fund's prospectus says:

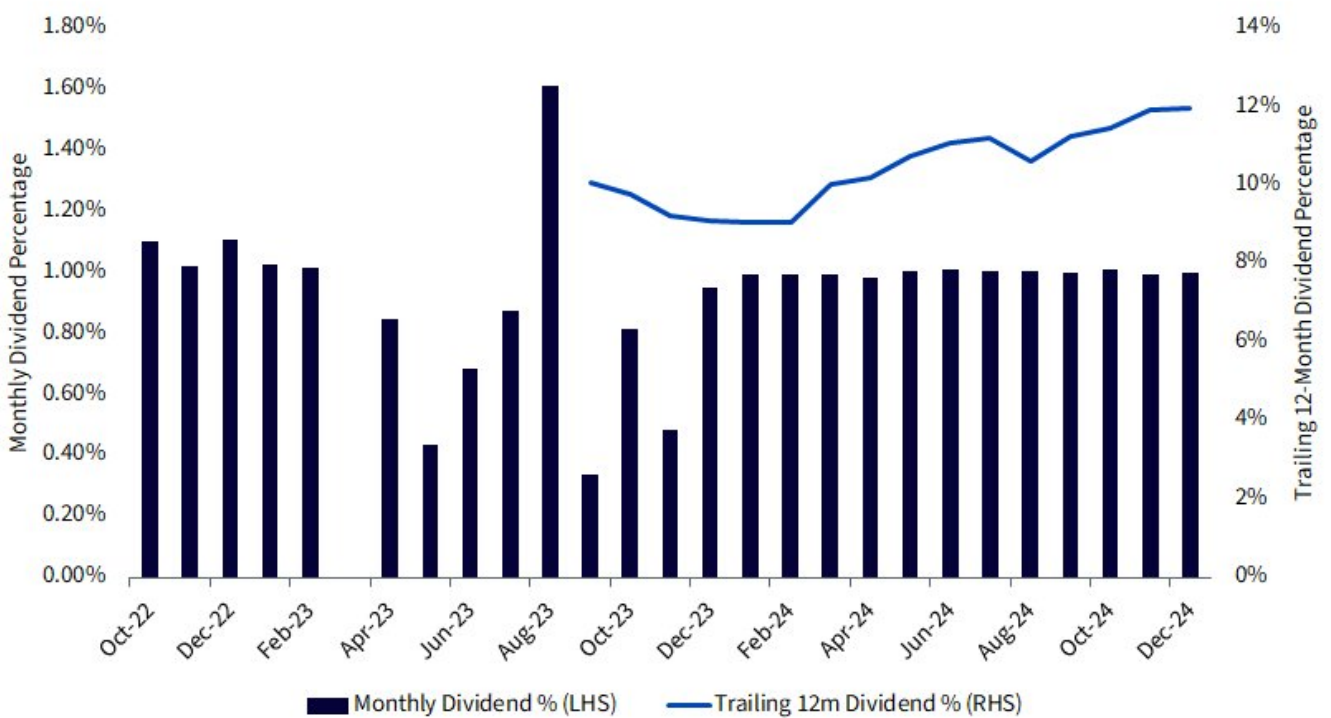

The Fund is managed in a way that seeks, under normal circumstances, to provide monthly distributions at a relatively stable level.

It makes sense to test how “relatively stable” these distributions have been over the period for which the current strategy has been in place, which began on October 24, 2022.

- 2023 did show a more volatile distribution history, particularly from March 2023 to November 2023.
- From December 2023 onwards, the distribution has been much closer to a level of 1%. There is no guarantee that the distribution will always be 1%, but it is a good illustration using data to establish from the actual record how stable it has been.

Figure 2 illustrates PUTW’s historical monthly distributions as a percentage of its net asset value, showcasing its income consistency and periods of distribution volatility since the strategy change in October 2022.

Figure 2: PUTW’s Distributions as a Percentage of NAV

Source: WisdomTree. Prior to 10/24/22, the WisdomTree PutWrite Strategy Fund was named the WisdomTree CBOE S&P 500 PutWrite Strategy Fund, which accounts for the time period shown in figure 2. **Past performance is not indicative of future results. Investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For PUTW’s most recent month-end and standardized performance, click [here](#).**

JEPI is notably taking a different approach and it's important for investors to understand that the dividend yield is merely one characteristic to assess on a given investment. The risk that PUTW employs to generate this income comes with a higher overall exposure to equity market movements—and those movements could very well go in the negative direction, impacting one's total return. Figure 3 displays the trailing 12-month dividend yields of PUTW, offering insights into its income-generating potential compared to its market price and net asset value.

Current performance may be lower or higher than the performance data quoted. For PUTW's most recent month-end and standardized performance, click [here](#).**

Total Returns across the Current Strategy

PUTW's Current Methodology

If one looks at PUTW's current methodology, one sees the following:

The WisdomTree PutWrite Strategy Fund seeks to track the price and yield performance, before fees and expenses, of the Volos US Large Cap Target 2.5% PutWrite Index.

But this was not always the case. Prior to October 24, 2022, the strategy was tracking the return of the CBOE S&P 500 PutWrite Strategy Index.

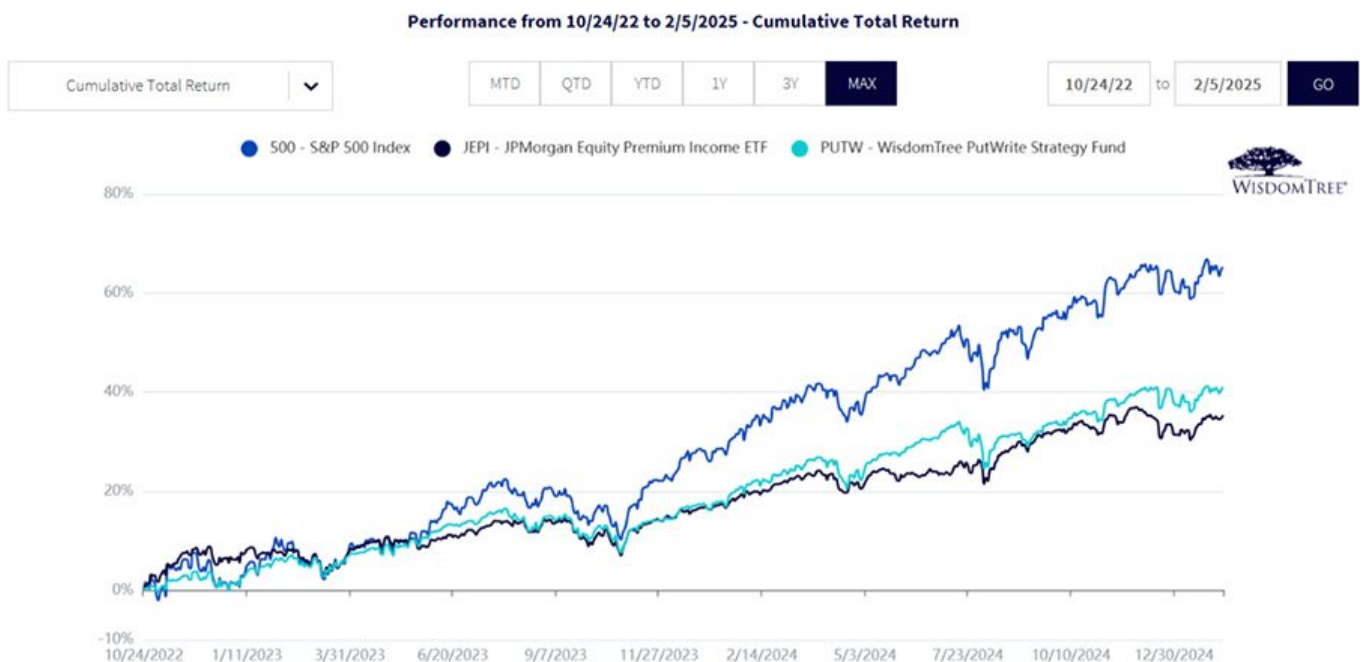

The prior approach was selling the at-the-money option on the S&P 500 Index every month. There was no focus on targeting a specific premium—so as the VIX Index fluctuated, so too did the premium generated. Since the VIX Index value tends toward about 15, the premium collected also tended toward 1.5% on a monthly basis.

The new approach is targeting a premium of 2.5%, and the way to get there is to sell in-the-money options. The plus side of this is greater income potential. The minus side is greater equity market sensitivity.

Figure 4 tracks the cumulative total returns of the S&P 500 Index alongside PUTW and JEPI since October 24, 2022, providing a visual comparison of how these strategies have performed in a rising market.

- The general trend of the S&P 500 Index was up, with cumulative total returns in the vicinity of 60%. Neither PUTW nor JEPI kept up, but neither of these strategies is designed to capture the full upside of the S&P 500 Index during a robustly positive market environment.

Period selected as the longest available due to the full history of the current strategy employed by PUTW. **Past performance is not indicative of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For PUTW's most recent month-end and standardized performance, click [here](#).**

While [PUTW](#) is selling options and keeping the proceeds in U.S. Treasury bills, JEPI employs a strategy of underlying stock selection. As of January 10, 2025, we looked at the top 10 holdings in the strategy. We know that these can change at any time, but given Professor Siegel's comments on CNBC, we found it notable that five out of the seven so-called Magnificent Seven stocks were included.

Figure 5 lists the top 10 equity holdings in JEPI as of January 2025, illustrating its stock selection approach, which includes a number of the Magnificent Seven tech giants.

Figure 5: The Top 10 Equity Positions in JEPI

Ticker Symbol	Company Name	Sector	% of Net Assets
META	META PLATFORMS INC	Communication Services	1.71%
AMZN	AMAZON.COM INC COMMON	Consumer Discretionary	1.67%

Conclusion: No Rewards Come without Risk

Option writing strategies can sport very attractive distribution yields, but we caution that looking at yield alone doesn't tell the full story. Generating greater income can mean taking on a different sort of risk.

- JEPI, on the other hand, selects a basket of roughly 100 stocks and generates an equity market exposure that is different from that of the S&P 500 Index. As with any stock-selection strategy, it can outperform or underperform in different periods.

With equity markets at or near record highs, based on the S&P 500 Index, it may make sense to take a deeper look at strategies that seek to sell volatility. Figure 6 provides a summary of important disclaimers and details about [PUTW](#), including risks associated with its strategy of selling options and holding U.S. Treasury bills.

Important Risks Related to this Article

For holdings of funds mentioned in this blog, please click the respective ticker: [PUTW](#), [JEPI](#).

There are risks associated with investing, including the possible loss of principal. The Fund will invest in derivatives, including S&P 500 Index put options (“SPX Puts”). Derivative investments can be volatile, and these investments may be less liquid than securities, and more sensitive to the effects of varied economic conditions. The value of the SPX Puts in which the Fund invests is partly based on the volatility used by market participants to price such options (i.e., implied volatility). The options values are partly based on the volatility used by dealers to price such options, so increases in the implied volatility of such options will cause the value of such options to increase, which will result in a corresponding increase in the liabilities of the Fund and a decrease in the Fund’s NAV. Options may be subject to volatile swings in price influenced by changes in the value of the underlying instrument. The potential return to the Fund is limited to the amount of option premiums it receives; however, the Fund can potentially lose up to the entire strike price of each option it sells. Due to the investment strategy of the Fund, it may make higher capital gain distributions than other ETFs. Please read the Fund’s prospectus for specific details regarding the Fund’s risk profile.
