Key Takeaways

- With the Fed moving into a rate-cutting cycle, many investors are thinking about how to move from cash into longer-duration fixed income investments.
- Within our fixed income Model Portfolios, we have been extending duration over the past several years and are now roughly neutral to our benchmark.
- A sector that could stand to benefit from lower interest rates is agency mortgage-backed securities.
- While the sector offers compelling valuations, all mortgages are not created equal, and investors need to be mindful of the risks inherent in current coupon mortgages.

This article is relevant to financial professionals who are considering offering model portfolios to their clients. If you are an individual investor interested in WisdomTree ETF Model Portfolios, please inquire with your financial professional. Not all financial professionals have access to these Model Portfolios.

Following the September FOMC meeting where the Federal Reserve kicked off a new easing cycle, inflation continues to moderate and economic data shows signs of slowing.

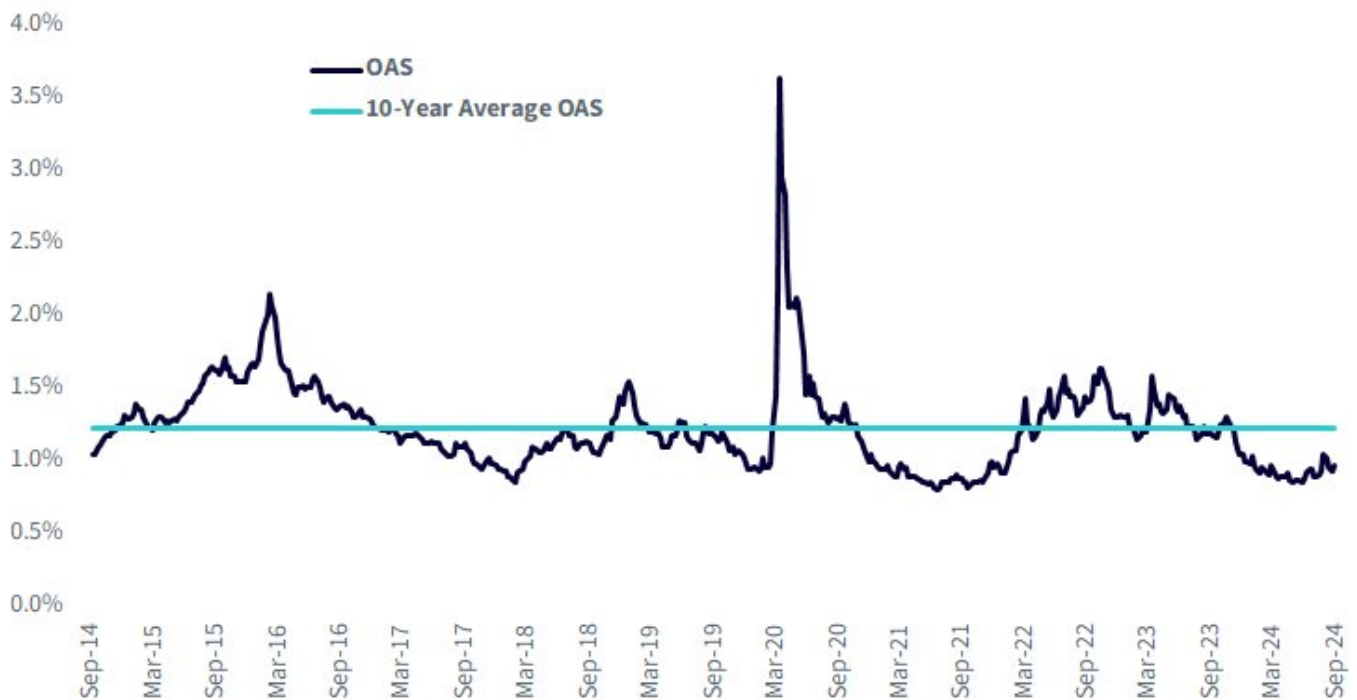

For fixed income investors who have adopted the “t-bill and chill” mantra, this could serve as a wake-up call that the days of earning greater than 5% yield with no volatility are coming to an end.

We expect that the attention of many such investors will soon shift (or perhaps already has) toward reinvestment risk.

Indeed, it was our expectation for monetary policy normalization that led our Model Portfolio Investment Committee to gradually move to a neutral duration position throughout last year.

A challenge facing investors looking further out on the yield curve is that investment-grade corporate bonds, and the core bond strategies that hold them, don't appear particularly attractive at the moment.

Figure 1: Credit Spreads (OAS) on Investment-Grade Corporate Bonds Remain below Long-Term Averages

Sources: WisdomTree, FactSet, as of 9/5/24. Represented by the OAS of the Bloomberg US Corporate Bond Index. You cannot invest directly in an index. Past performance is not indicative of future returns.

One area of the fixed income landscape that does currently offer a historically attractive yield premium is agency mortgage-backed securities (agency MBS).

One of the largest asset classes in the U.S. bond market, the principal and interest of agency MBS are guaranteed by government-sponsored entities (GSEs) such as Fannie Mae, Freddie Mac and Ginnie Mae, which benefit from their relationship with the U.S. government.

Even with this implicit backing, an MBS typically provides a yield premium (measured by option-adjusted spread, or OAS) compared to Treasuries as compensation for investors assuming the prepayment risk embedded in the underlying mortgages.

This spread is currently well above its own long-term average and at a significant historical premium to corporate bonds.

Figure 2: Agency MBS Yield Premium Relative to Investment-Grade Corporate Bonds

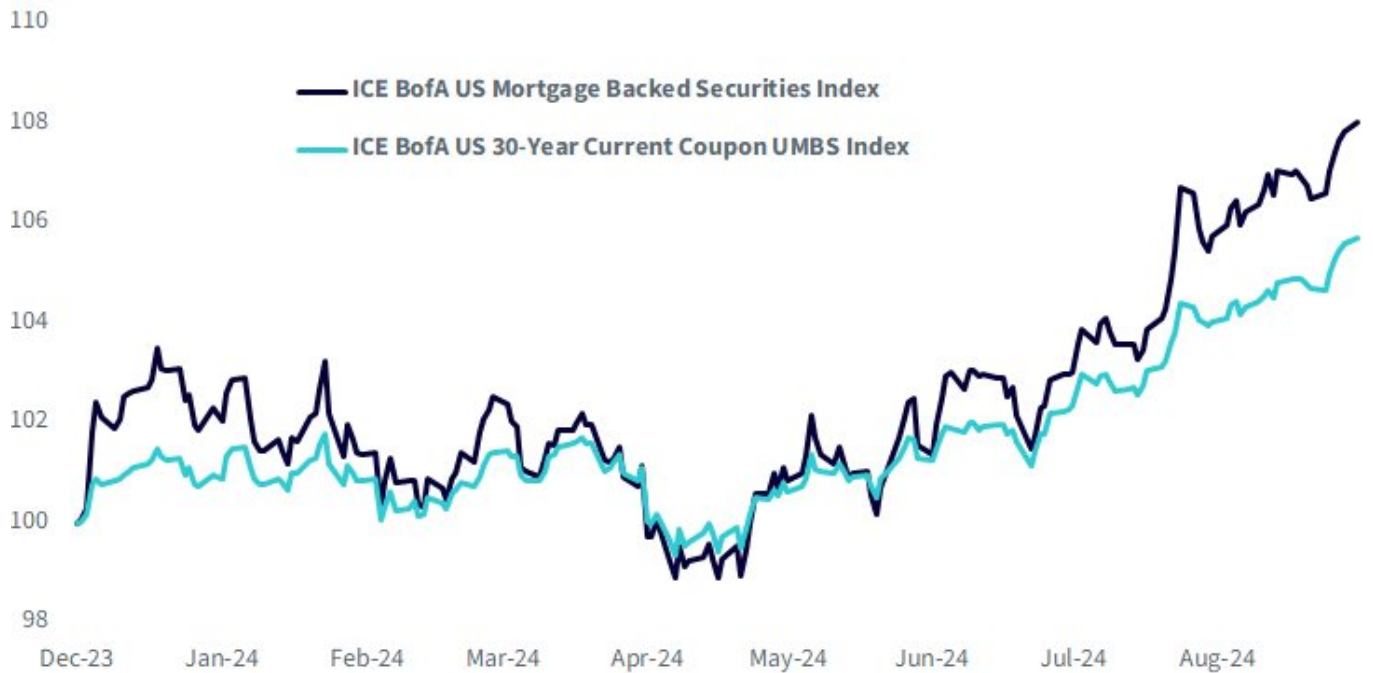

Source: BofA Global Research, as of 9/5/24. Yield premium represented by the MBS basis and 5y IG CDX spread. You cannot invest directly in an index. Past performance is not indicative of future returns.

In addition to attractive valuations, agency MBS has been one of the top-performing fixed income sectors since the start of the third quarter, up more than 8% in less than three months.¹ Driven by a combination of rate and spread moves, we believe this recent performance is largely explained by investor rotation into high-quality, longer-duration asset classes as the economy starts to slow and the Fed prepares to cut rates.

However, as outlined in one of our [previous posts back in December 2023](#), not all agency mortgages are created equal.

Strategies targeting higher-yielding current coupon mortgages have gathered significant assets in recent quarters. As reiterated in that post, one of the biggest risks associated with current coupon mortgages is their more negative convex nature. This can be seen in the difference between the performance of a broad-based agency MBS index and a 30-year current coupon equivalent. Since writing that post on December 11, 2023, current coupon mortgages have underperformed the broad index by roughly 225 basis points.

Figure 3: Recent Performance of Current Coupon Mortgages vs. the Broad Agency MBS Index

Source: ICE, as of 9/9/24. Past performance is not indicative of future results. You cannot directly invest in an index.

In summary, we believe agency MBS remains an attractive option for investors looking to lock in yields and extend duration into high-quality fixed income ahead of the upcoming Fed rate cut cycle.

However, agency mortgages are a nuanced asset class, and investors should be fully aware of the risks involved in strategies that target single cohorts of the sector with the allure of higher yields.

In our Model Portfolios, which have an over-weight to securitized assets and agency MBS, we typically allocate to broad, actively managed strategies that can diversify exposures across coupons, manage convexity risk and capitalize on specific opportunities when they arise.
