2. The Fund’s net expense ratio of 0.48% (the amount charged to shareholders) reflects a contractual waiver of 0.05% through October 31, 2017.

3. Effective June 30, 2016, the Fund’s net expense ratio of 0.65% (the amount charged to shareholders) reflects a contractual waiver of 0.10% through December 31, 2017. Prior to June 30, 2016, the Fund’s gross and net expense ratio was 0.95%.

4. The Fund’s net expense ratio of 0.38% (the amount charged to shareholders) reflects a contractual waiver of 0.06% through December 31, 2017.
The Fund Distribution Yield is the annual yield a Fund investor would receive in distributions if the most recent Fund distributions for the quarter stayed consistent going forward. It is calculated by annualizing the most recent quarter’s Fund distributions and dividing by the current Fund NAV. The yield represents annualized distributions from the Fund for the most recent quarter and does not represent the total returns of the Fund. Due to the seasonality and timing of the dividend income received from the underlying securities held by the equity Funds, the equity Funds’ annualized distribution yield based on the most recent quarter’s income distribution may not be representative of the distribution yield over the course of a full year.

The SEC Standardized Yield is a standard yield calculation developed and required by the Securities and Exchange Commission (SEC). It is based on the most recent 30-day period covered by the Fund’s filings with the SEC. The yield reflects the dividends and interest earned during the period, after the deduction of the Fund’s expenses. This is also referred to as the “Standardized Yield.”

The Trailing 12-Month Distribution Yield is calculated by using the sum of all Fund distributions paid over the last four quarters and dividing by the Fund’s NAV as of 12/31/2016. This measure represents the yield over the prior twelve months if the investor had purchased the Fund and held it for a year, assuming no change in NAV. It may not be an accurate reflection of the actual return an investor may have received because the Fund’s NAV is constantly changing due to market factors.

There are risks associated with investing including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. Investments in real estate involve additional special risks, such as credit risk, interest rate fluctuations and the effect of varied economic conditions. Funds that focus their investments in one country or region may be significantly impacted by events and developments associated with the region which can adversely affect performance. Funds focusing on a single sector and/or smaller companies generally experience greater price volatility.

Investments in emerging, offshore or frontier markets are generally less liquid and less efficient than investments in developed markets and are subject to additional risks, such as risks of adverse governmental regulation and intervention or political developments. Inflation protected securities do not eliminate risks associated with inflation or deflation. Investments in currency involve additional special risks, such as credit risk and interest rate fluctuations. Derivative investments can be volatile and these investments may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. As these Funds can have a high concentration in some issuers the Funds can be adversely impacted by changes affecting such issuers.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition when interest rates fall income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer’s ability to make such payments will cause the price of that bond to decline. High-yield or “junk” bonds have lower credit ratings and involve a greater risk to principal. While the Duration Funds and Fundamental Fixed Income Funds attempt to limit credit and counterparty exposure, the value of an investment in the Funds may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund’s portfolio investments. Investments in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements and may decline prior to the expiration of the repurchase agreement term. Securities with floating rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value. The issuance of floating rate notes by the U.S. Treasury is relatively new and the amount of supply may be limited. One of the risks associated with investing in inflation protected securities involves additional risks, such as risks of adverse governmental regulation and intervention or political developments.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. In computing the market price total returns for GCC, the inputs for dates on or after January 1, 2016 reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed, and the inputs for dates prior to January 1, 2016 reflect the last price as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

Performance less than one year is cumulative.
